|           | <p>problem at Barcombe Reservoir (River Sussex Ouse) and Arlington Reservoir (Cuckmere River - Eastbourne Water) to name just two.</p> <p>There are much better alternative ways to reduce water use, including domestic grey-water recycling, and dry toilets - the technology is tried and proven.</p> <p>More water storage capacity is key. There are massive water-filled sand pits across West Sussex from [REDACTED] to Washington - a big one near me is at Minsted (Midhurst). Similarly, there are Confined Aquifers that could be pumped full during Winter and abstracted from during drought.</p> <p>Unfortunately, the supposedly confined aquifer of the Ashdown Sandstone Beds at Singleton has been contaminated by the highly toxic waste - high pressure injected (dumped) by Star Energy (was IGas) from the leased site in Singleton Forest, of which the S.o.S. EFRA is the Landowner (That Lease is due for renewal in 2028). That waste fluid is highly saline, contains hydrocarbons, heavy metals, potent biocides and corrosive chemicals used to stimulate the oil extraction, and is probably radioactive. The threat of forever contamination of our vital chalk aquifer increases as the pressure and lubrication spreads in an area of geological faults and seismic activity. The annuli of the 7 oil wells also provide a pathway through the clay that separates the Ashdown Beds from the chalk aquifer - with records of cracked well casing and contamination going back to the mid-1990s ... recently Permitted by the EA to 2031.</p> <p>Even more unfortunately, the Singleton situation of dumped toxic waste - including brought in by road from other sites, is far from alone. You must be aware of the public outcry over the Brockham, Surrey Application by Angus Energy to bring in highly toxic fluid waste from other oil extraction sites for high-pressure injection dumping.</p> <p>Please, Please be aware that water is vital for all life. Oil is not!</p> <p>With kind regards,</p> <p>P.S. I must mention the dire situation of the River Ems, which dried up to a few stagnant puddles - never before in living memory in the lower reaches - due to groundwater over-abstraction at Walderton.</p> | <p>internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level. Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plants can be built in a modular fashion—i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change, and delivering Environmental Destination.</p> <p>We note the comment regarding the pollution of the Ashdown Sandstone Beds at Singleton.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. We will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>With regards to the status of the River Ems, please be advised that the river is located within the Portsmouth Water drinking water supply area. Groundwater abstractions which may have a potential impact on the flows of the River Ems are operated by Portsmouth Water. Please follow up with them to discuss your concerns.</p> |
| WRMP866   | <p>Dear Sir/Madam</p> <p>I refer to Southern Water's recent revised Water Resources Management Plan which is subject to public consultation until Dec 4th 2024. This plan, amongst other proposals, promotes the recycling of treated sewage water into the drinking water system which will have detrimental environmental implications if implemented.</p> <p>I am writing to register my strong objection to this new plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>I supported the siting and building of a reservoir in Havant thicket but at the time it was only going to store natural spring water from the local chalk aquifers. Southern Water are now proposing to pump treated sewage water back into the reservoir and then pump this mixed water to [REDACTED] to reduce abstraction from the rivers in that area. This will require a new large treatment plant (to be sited on a landfill site), five pumping stations and three pipelines, one of which will be 45km long.</p> <p>The cost of the project is expected to be £1.2 billion which, as with all major infrastructure projects, will certainly be exceeded.</p> <p>Environmental issues</p> <p>While it may be technically possible with a well-run plant to treat the effluent safely, I am concerned that Southern Water will not run the plant 100% effectively all of the time, especially when they know the water is going into an 'environmental buffer lake' (the reservoir) and not direct into the drinking water supply. Southern Water's track record in controlling spills and discharges gives justified concern that they will not be able to run the treatment plant without discharges of pollutants into the reservoir.</p> <p>There is an environmental risk to Langstone Harbour from pollution by leachate from the Broadmarsh landfill site caused by the necessary piling work during construction of the treatment plant.</p> <p>Financial</p> <p>The cost of this project is enormous and it is not the best way to spend money and there are alternative solutions available. Apart from the capital cost, the ongoing operating costs will be very high ie treatment plant running costs and long distance pumping costs. I believe that Southern Water (Mcquarie group) and Portsmouth Water (Mcquarie links) are trying to select the most profitable solution rather than the right one</p> <p>Alternative solutions</p> <p>Alternative solutions have been proposed but have not been considered properly, examples being:</p> <ul style="list-style-type: none"> <li>• Storage of water in aquifers or new reservoirs close to Southampton. Aquifer storage is used in the USA and there has been a successful trial in the UK.</li> <li>• Move the river water abstraction points closer to the tidal limit to protect the whole of the freshwater catchment</li> <li>• There are other sewage works closer to the Southampton region, requiring much shorter pipelines, and less use of energy and carbon to get the water to where it is needed.</li> <li>• Reduce leakage in the system with a more stringent target to be achieved in a shorter time scale. If a substantial proportion of the 108 million litres lost per day were could be saved, this would go a long way towards making up the water supply shortfall. It should be noted that the current rate of mains renewal is completely inadequate.</li> </ul> <p>I am concerned that these less environmentally damaging solutions which have the capability of solving the problem, have not been considered seriously.</p> <p>I therefore object to Southern Water's revised Water Resources Management Plan.</p> <p>Yours faithfully,</p> | <p>after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination, and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>Also, the £1.6 billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector: <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a></p> <p>It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> |
| WRMP869   | <p>Hampshire Water Transfer and Water Recycling Project.</p> <p>As a Hampshire resident and paying customer of Southern Water, I strongly object to their proposals for the Hampshire Water Transfer and Water Recycling Project and urge DEFRA to reject these proposals and demand Southern Water provide a more cost effective and environmentally friendly solution to satisfy our future water demands.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| WRMP871   | <p>While I recognise there are significant future water demands for Hampshire that cannot be satisfied by the existing infrastructure and abstraction from the highly threatened chalk River Itchen, I believe Southern Water's high-cost proposals are aimed at increasing their shareholder returns rather than providing a low cost, low environmental impact solution that will be of real benefit to their customers.</p> <p>The following aspects of their current proposals are of particular concern.</p> <ul style="list-style-type: none"> <li>Southern Water has been prosecuted many times for treatment plant and pumping station failures which have polluted our local rivers and coastline. When challenged, they have been slow to respond and fix the problem. Why then, should this Company be allowed to implement a project that includes complex technology required to treat final sewage effluent with the associated risk of pollution to the internationally protected habitats in Langstone Harbour and the Solent, particularly when there is alternative low cost, low environmental impact solutions available.</li> <li>The current proposals require the pumping and treatment equipment to be operating for 365 days a year at a cost of £3 million regardless of the water demand. Alternate low energy, low environmental impact options that can be used as a drought resource must be brought forward to satisfy future demand. Southern Water's current leakage reduction program is totally inadequate. The current loss is greater than 100 million litres of water lost every day!</li> <li>The huge cost of servicing the debt for the current proposals will have to be paid for by customers while providing a profit of £45 million to Southern Water. Given Southern Water's precarious financial situation in the bond market, the financial risks associated with these proposals are unacceptable to the customers and also, I suggest to the UK Government.</li> </ul> <p>I urge DEFRA to reject the current proposals and demand a low cost, low environmental impact solution.</p> | <p>can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP871   | Dear Sir / Madam,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           | <p>I am writing to you to record my objection and concerns to the Southern Water proposed Hampshire Water Transfer and Water Recycling Project, and to request that DEFRA reject Southern Water plan. Southern Water should be required to submit a plan that puts the environment, threats of climate change, and customers first, before their own profits. Whilst recognising that investments need to be made in our water infrastructure, Southern Water's proposal appears to be focussed on increasing their regulatory asset base, to maximise their profits, with scant regard for the energy intensity, environmental damage and value for money. The short economic life (expected life of circa 40 years), and immense capital cost and ongoing operating cost of the proposed Hampshire Water Transfer and Water Recycling Project, which if approved, would be running 365 days a year (even when the water is not needed), is incompatible with Southern Waters stated aim of reaching net zero by 2030, and indeed the country's net zero ambitions.</p> <p>In particular, I have the following concerns regarding the project;</p> <ol style="list-style-type: none"> <li>1. There appears significant environmental, ecological and health risk to Langstone Harbour, by developing the effluent recycling plant and digging deep tunnel shafts that would be required, on the contaminated landfill site at Broadmarsh, which was tipped throughout the late 1960's to the 1980's with no lining over the harbour muds.</li> <li>2. Real concern about the competency and ability of Southern Water to install and operate new complex technology to treat final sewage effluent, which has never been used in the UK for this purpose before. Given that Southern Water has a lamentable track record in operating and maintaining its existing infrastructure without causing pollution, and damage to the environment, it raises huge concerns as to its ability and competency to safely operate the new complex advanced effluent recycling treatment technology without incident or pollution.</li> <li>3. The regular frequency with which Southern Water discharges raw sewage into Langstone Harbour, even when dry, and its criminal behaviour leading to a fine of £90m due to serious failures in the operation of Southern Water's sewage treatment sites, and the deliberate misreporting of performance information, means there is a strong likelihood of turning people away from tap water due to the lack trust, and therefore buying bottled water, thereby creating a new used plastic water bottle mountain, especially as mixed reservoir water will taste different to spring water.</li> <li>4. Data shows that Southern Water could address a sizeable proportion of its projected water shortfall by being much more ambitious in addressing leakage reduction in its infrastructure. Data shows that Southern Water loses 3% of water that it takes from the environment, before it even reaches the treatment works, and then a further 19% is lost in the distribution network. It is worth mentioning that customers are charged for treating the 19% of water lost due to leakage in Southern Water's distribution network. Far more focus, energy and ambition is required in addressing Southern Water's poorly maintained distribution network. Southern Water's current replacement rate of their ageing pipe network is only 1 in 1,000 years. How does this credible and how does it pass scrutiny ?</li> </ol> <p>I am given to understand that there are a number of viable potential alternatives, which should be investigated. We receive plenty of rain in the winter months, which could be stored for use in</p> | <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> |

The proposed effluent recycling schemes have the highest negative impact score compared to any of the alternatives, and is not compatible with the climate and environmental targets of the country, and indeed, Southern Water.</p> <p>I would be grateful if would acknowledge safe receipt of this email.</p> <p>Yours sincerely,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WRMP873   | <p>We are horrified to learn that Southern Water plan to use Havant Thicket Reservoir, being developed by Portsmouth Water, for recycling treated sewage. The reservoir is just three miles from where we live and our water is supplied by Portsmouth Water. We understand there are many other ways Southern Water could deal with their sewage problem and it is scandalous that our local supply of pure aquifer water will be contaminated in this way. Think again Southern Water.</p> <p>Yours in protest</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP874   | <p>Dear DEFRA,</p> <p>I am writing to formally object to Southern Water's revised draft Water Resources Management Plan (WRMP) 2024 on the grounds that it prioritises unsustainable and impractical solutions while failing to address viable, environmentally sound alternatives. Below are my key concerns, supported by academic research:</p> <p>1. Climate Adaptation</p> <p>The plan does not adequately address climate resilience by failing to prioritize the capture and storage of winter rainfall to mitigate summer shortages. Effective water resource management under climate change necessitates adaptive strategies to harness seasonal excesses (Götzinger et al., 2021).</p> <p>2. Comprehensive Review of Alternatives</p> <p>By refusing to conduct a comprehensive re-evaluation of alternatives, Southern Water risks overlooking sustainable solutions like reservoirs or aquifer storage. Research underscores the importance of exploring multiple options to ensure long-term resilience (Singh et al., 2022).</p> <p>3. Reliance on Effluent Recycling</p> <p>The heavy reliance on energy-intensive effluent recycling schemes conflicts with carbon neutrality goals and poses potential risks to public health and ecosystems (Sapkota et al., 2018). These schemes should be balanced with natural solutions.</p> <p>4. Implementation Timelines</p> <p>Unrealistic timelines for recycling projects could lead to delays or failure, jeopardizing water security. Feasible timelines are essential for effective water management projects (Jahan et al., 2023).</p> <p>5. Unsustainable Drought Management</p> <p>Proposals to tanker water from Norway are environmentally damaging and impractical. Sustainable water management requires local, adaptive solutions to avoid reliance on such extreme measures (Met Office, 2022).</p> <p>6. Inflate Demand Projections</p> <p>Overestimated population growth assumptions lead to an unnecessary focus on</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</li> <li>2. Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</li> </ol> <p>Through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>controversial infrastructure instead of demand-side solutions. Accurate forecasting is critical for effective planning (Götzinger et al., 2021).</p> <p>7. Environmental Oversight<br/>Insufficient environmental assessments risk damaging ecosystems and non-compliance with legal standards. Thorough evaluations are vital to ensure ecosystem protection (Sapkota et al., 2018).</p> <p>8. Overlooked Alternatives<br/>The plan neglects viable alternatives like Managed Aquifer Recharge (MAR), which is proven effective in addressing water scarcity while protecting ecosystems (Singh et al., 2022).</p> <p>9. Leakage Reduction Neglect<br/>With 19% of treated water lost daily, addressing leakage is an obvious and cost-effective priority that the plan inadequately emphasises (Götzinger et al., 2021).</p> <p>10. Ignoring Customer Preferences<br/>The plan disregards public preference for natural solutions like reservoirs and aquifer storage, favoring less popular options. Public acceptance is key to the success of water reuse projects (Yates et al., 2021).</p> <p>I urge DEFRA to reject Southern Water's current WRMP 2024 and mandate a revised plan that: Fully explores sustainable alternatives, such as reservoirs and aquifer storage.</p> <p>.</p> <p>Sets ambitious targets for reducing leakage.</p> <p>.</p> <p>Aligns with climate adaptation strategies by capturing and storing excess winter rainfall. Includes robust and transparent environmental assessments.</p> <p>.</p> <p>It is imperative that water management strategies balance long-term environmental sustainability with practicality and public trust. Southern Water's current plan falls significantly short of these objectives.</p> <p>Sincerely,</p> <p>References<br/>Götzinger, M., Montzka, C., &amp; Frey, R. (2021). Adapting water resource management to climate change. Met Office Research</p> | <p>increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Regarding delivery timescales, we aim to have the Hampshire Water Transfer and Water Recycling Project operational by 2034.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>3. For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>4. As the environmental regulators of the water industry, the Environment Agency and Natural England have provided detailed comments regarding the Environmental Assessments for the WRMP. Work is being undertaken by our consultants to address these comments and make any necessary changes to ensure that the assessments align with regulatory requirements. We have engaged an independent consultant for our environmental assessments who are following the standard methodology for these assessments. The investment model takes into account the outcome of environmental assessments and if two otherwise equivalent options are available, it will select the option with lower environmental impact.</p> |

Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p>                                                                                                                                                                                                                                                                                     |
| WRMP875   | <p>To whom it may concern</p> <p>I am very disappointed with Southern Water's new proposal. On several issues, I object to SW's draft of the Water Management Plan.</p> <p>Storing raw/rainwater water and having recreational use for the Havant Thicket reservoir provided a sustainable, all-year-round water storage facility for many potential uses and reduced the need to find water in other locations.</p> <p>The UK only collects about 1% of rainwater. The proposed solution does not do this and recycles water from the [redacted] Waste Water Treatment Works to pump it to the Havant Thicket reservoir. The solution should be to improve stormwater capture and storage across the region and/or abstract water further downstream closer to estuaries where greater volumes can be captured.</p> <p>Other issues with the proposal include:<br/> Significant new infrastructure with huge environmental impact and damage where more simple schemes would suffice. See below<br/> The new builds would require running costs leading to higher customer bills, increasing SW's net worth and share price but not providing a cost benefit to the customers.<br/> For example</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.<br/> Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>The SW Broadmarsh ERP is on the coast, perhaps 10 -15m above mean sea level. Havant Thicket is over +25m above this. Constantly supplying and pumping 365 days/annum, even when not needed, is hugely energy-demanding and wasteful.</p> <p>SW also intends to pump treated effluent up 90m to Portsdown Hill, gravity feeding it to a Water Treatment Works over 40km at [REDACTED] increasing energy demand even further.</p> <p>SW is not constructing an ERP for PW customers, so Havant Thicket's approval to take recycled effluent was not granted. The fundamental purpose of the original application for a reservoir for raw water storage has significantly changed. Effectively, SW attempts to subvert full public engagement by using Havant Thicket for another purpose.</p> <p>According to SW, in their July and August 2022 initial consultation on recycling "dirty" into "treated" water pumped to Havant Thicket, they had PW's approval. This is contrary to how it was conveyed in 2020.</p> <p>Add in the UK's Net zero Carbon emissions target for 2050. Why would anyone consider pumping 365 days a year—an extremely expensive process?</p> <p>PW does not intend to monitor water quality in its new Reservoir but instead relies on SW. Water Quality requires independent monitoring.</p> <p>SW has a poor reputation for fixing leaks, currently at a rate of 19%, and therefore cannot be trusted with these large-scale infrastructure projects until they prove they can fix the waterworks. An organisation that has been fined £ 90 million in the past due to repeated illegal effluent discharges does not inspire confidence in upholding the very high maintenance requirements needed to ensure that the new reservoir is not polluted.</p> <p>The financial burden to SW consumers of a new ERP at Broadmarsh and pipes to Havant Thicket Reservoir is now £1.2 to 1.4 billion or £30/annum per customer.</p> <p>Three Winter storage reservoirs could be built for the Broadmarsh ERP (the estimated cost for the construction of the Havant Thicket Reservoir is £350 million).</p> <p>In the meantime, the [REDACTED] Water Treatment Works is not expected to be served by Broadmarsh until 2035/40, and in drought conditions, it could rely on Oceangoing Tankers from Norway.</p> <p>What a crazily expensive and emission-rich solution when a rethink of the project could solve all of this.</p> <p>SW's [REDACTED] [REDACTED] [REDACTED] persistently fails. It discharged raw sewage into the "Protected" Langstone Harbour for 181 hours in the eight days between 24 October and 1 November 2024. This is not a new failure.</p> <p>SW can earn profits from investing in new infrastructure but not from maintaining pre-existing infrastructure—perhaps the fundamental reason for this mammoth planning process resubmission.</p> | <p>ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie</p> |

|           | <p>In summary, DEFRA should not authorise the grant of a Development Consent Order for an Effluent Recycling Plant at Broadmarsh that, for the many reasons stated, does not provide an economic or environmental benefit.</p> <p>Regards</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP876   | <p>We are Emsworth residents and would like to voice our serious concerns and outrage at the proposal to use recycled sewage effluent to top up our water supply, and to build a treatment plant at the landfill site at Broadmarsh.</p> <p>There has been a total lack of public engagement and transparency about this whole project (failure to publicise and withholding documents etc), and we feel strongly that Southern Water is ignoring public health and environmental interests and riding roughshod over the interests of the environment, local residents and consumers in their pursuit of profit.</p> <p>One of the features of climate change is increased rainfall, and therefore lack of water is not a problem - it is a matter of collecting more water in winter, and storing it in a way that enhances the environment by encouraging biodiversity and recreational use rather than adversely affecting the surrounding area and beyond.</p> <p>The positioning of the treatment plant in an already polluted location will not only cause a significant environmental risk to the waters and shoreline around Langstone Harbour, but it will also be a structural eyesore. The methodology is also energy intensive. Rather than trying to foist recycled effluent on the population, the local water companies should do more about addressing leaks and investing in upgrading their supply networks.</p> <p>From a health perspective, we are extremely worried about consuming water that has recycled sewage in it. We already use some bottled water for drinking, and if we knew that our water contained effluent, then we would need to buy even more bottles of water (increasing use of plastic) so that we did not have to use tap water for cooking purposes. Given their track record on pollution, we cannot trust Southern Water (or indeed Portsmouth Water) to guarantee that our drinking water is free from harmful sewage by-products such as microplastics and chemical/medication residues etc.</p> <p>For a number of reasons, including those stated above, we would like to register our strong opposition to Southern Water's plan and request that it be rejected outright by Defra.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>The water recycling plant will be sympathetic to Broadmarsh Coastal Park and views from Langstone Harbour without compromising functional or safety requirements.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                         | <p>Regarding storage of rainfall, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Regarding your concerns about environmental risk, A consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. We are planning to go beyond the Government target and reduce leakage 53% by 2050. We will be looking at emerging technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">customers: https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP877   | <p>Dear Sir / Madam,</p> <p>Firstly, Southern Water should not have a license to operate.</p> <p>I am writing to you to record my very strong objection and to raise concerns to the Southern Water proposed Hampshire Water Transfer and Water Recycling Project, and to request that DEFRA totally reject Southern Water plan. Southern Water should be required to submit a plan</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>that puts the customer and environment, threats of climate change, first, before their own profits ( which are far too high). Whilst I recognise that investments are needed to be made in our water infrastructure, Southern Water's proposal appears to be focussed on increasing their regulatory asset base, to maximise their profits, with very little regard for the energy intensity, environmental damage and value for money. The short economic life (expected life of circa 40 years), and immense capital cost and ongoing operating cost of the proposed Hampshire Water Transfer and Water Recycling Project, which if approved, would be running 365 days a year (even when the water is not needed), is incompatible with Southern Waters stated aim of reaching net zero by 2030, and indeed the country's net zero ambitions.</p> <p>In particular, these are my concerns regarding the project;</p> <ol style="list-style-type: none"> <li>1. There appears significant environmental, ecological and health risk to Langstone Harbour, by developing the effluent recycling plant and digging deep tunnel shafts that would be required, on the contaminated landfill site at Broadmarsh, which was tipped throughout the late 1960's to the 1980's with no lining over the harbour muds.</li> <li>2. Real worry about the competency and ability of Southern Water to install and operate new complex technology to treat final sewage effluent, which has never been used in the UK for this purpose before ( although they have given mis information regarding this at a previous time ) . Given that Southern Water has a lamentable track record in operating and maintaining its existing infrastructure without causing pollution (sewage for life on seas and rivers!) , and damage to the environment, it raises huge concerns as to its ability and competency to safely operate the new complex advanced effluent recycling treatment technology without incident or pollution.</li> <li>3. The frequency with which Southern Water discharges raw sewage into Langstone Harbour, Chichester harbour and surrounding seas even when dry, and its criminal behaviour leading to a fine of £90m due to serious failures in the operation of Southern Water's sewage treatment sites, and the deliberate misreporting of performance information, means there is a strong likelihood of turning people away from tap water due to the lack trust, and therefore buying bottled water of which I will do, thereby creating a new used plastic water bottle mountain, especially as mixed reservoir water will taste different to spring water.</li> <li>4. Data also shows that Southern Water could address a sizeable proportion of its projected water shortfall by being much more ambitious in addressing leakage reduction in its infrastructure. Data shows that Southern Water loses 3% of water that it takes from the environment, before it even reaches the treatment works, and then a further 19% is lost in the distribution network. It is worth mentioning that customers are charged for treating the 19% of water lost due to leakage in Southern Water's distribution network. Far more focus, energy and ambition is required in addressing Southern Water's poorly maintained distribution network. Southern Water's current replacement rate of their ageing pipe network is only 1 in 1,000 years. How is this this credible and how does it pass scrutiny ?</li> </ol> <p>There are many viable potential alternatives, which should be investigated. We receive plenty of rain in the winter months,( especially with global warming) which could be stored for use in dry summers. The proposed effluent recycling schemes have the highest negative impact score</p> | <p>which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

|           | <p>compared to any of the alternatives, and is not compatible with the climate and environmental targets of the country, and indeed, Southern Water.</p> <p>Yours Sincerely</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP879   | <p>Dear Sir/Madam</p> <p>I wish to object most strongly to this revised Draft Water plan by Southern Water and ask that Defra reject it.</p> <p>My main objections are :-</p> <ol style="list-style-type: none"> <li>1. Mixing effluent with drinking water should be a last resort rather than a first.</li> <li>2. Not making the most of capturing and storing rainwater is a major omission from any strategic plan.</li> <li>3. The plan involves continuous pumping of many millions of litres of effluent/water over many kilometres and as such is energy hungry and environmentally unfriendly.</li> <li>4. The plan does not prioritise reducing leakage and usage as fully or as quickly as it should.</li> <li>5. The strategy should be to make more use of assets like the new Havant Reservoir or natural aquifers. As a regular local walker in this area, I feel that this facility should maximise the local nature of this area for the enjoyment and well being of local residents. I understand that the planned mixing of effluent into the Havant Reservoir will result in algae growing there and undermining the leisure usage that was a key component of its initial justification.</li> <li>6. I recognise that any solution will be hugely costly but it appears to me that the planned expenditure is being misdirected and so will result in a HUGE mistake which our children and grandchildren will have to bear the brunt of and also rectify.</li> </ol> <p>Yours sincerely</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</li> <li>2. Regarding storage of rainwater, our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It is worth noting, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</li> <li>3. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply reducing the water abstracted from the environment supporting wildlife and the environment.</li> <li>4. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</li> <li>5. Regarding possible algal blooms, purified recycled water is extremely clean. Water quality in Havant Thicket reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</li> </ol> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| WRMP881   | <p>Dear Sirs,<br/>I am writing to complain about Southern Water's Effluent Recycling Plan.</p> <ul style="list-style-type: none"> <li>• Why is SW not collecting more rainwater and storing it? We get enough rain during the year to cover the dry periods.</li> <li>• I am particularly concerned about the environmental impact of the new facility that is planned. This is an area of outstanding beauty and to have a large recycling plant built at Broadmarsh is unacceptable. The need for new outlets into the harbour is also a major concern.</li> <li>• There is already pollution from your sewerage farm at Broadmarsh that affects the water in the harbour. This new recycling plant, as I understand, will be discharging effluent 4 x more concentrated. People like to swim and sail in the harbour, and they do not want to be swimming in sewerage! This is already a major issue for the harbour and this project will only make it worse.</li> <li>• I understand the treated water is destined for [REDACTED] some 30+ miles away. A ridiculous solution when there are places much closer to [REDACTED] to service this town's water needs. The cost in energy to transport water this distance is huge. You should be reducing energy usage, not increasing it. This country already has a problem with electric energy and this recycling plant will use huge amounts of energy. There must be an alternative.</li> <li>• I understand the cost will be over £1 billion. I do not believe this will provide the customer with value for money. It will take many years to recover these costs in ever. Why not use the money to invest in new reservoirs benefiting the environment and communities. This would provide a long term solution and not become redundant in 60 years.</li> <li>• Where is the public consultation for the project? I have seen nothing!</li> <li>• When customers start receiving recycled water from Portsmouth Water many will turn to bottled water. They do not trust Southern Water whom already have such a bad track record.</li> <li>• When is SW going to repair their leaking pipes? If this was a priority there would be less need for a recycling programme.</li> </ul> <p>I could go on, but as you can see, I have no faith in Southern Water. They have failed to provide effective sewerage treatment and polluted the sea for years and often hiding the fact. They have not prepared the sewerage farms to cope with the extensive new builds in the area. There has been minimal consultation with the public, maybe this is a deliberate ploy. Who knows?</p> <p>The community deserve a sewerage system that is environmentally friendly and not one that negatively impacts the environment, our fresh water supplies and uses excessive power to run. A system that they can live and be proud of.</p> <p>Regards,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Portsmouth Harbour WTW is already in existence. The water recycling plant will be sympathetic to Broadmarsh Coastal Park and views from Langstone Harbour without compromising functional or safety requirements.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Our estimated cost for Havant Thicket Reservoir is included in our Water Resources Planning tables.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October–November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35–40 minutes with the remaining time allocated to Q&amp;A.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP882   | <p>I am emailing to object about Southern Water's Plans for Effluent Recycling and water management.</p> <p>The effluent recycling scheme is wrong on every count -</p> <p>1. It will require a huge amount of infrastructure and as I understand it only has a 60 year lifespan which is hardly a sustainable option.</p> <p>The proposed Broadmarsh site is unsuitable for the proposed plant. building on an old landfill site with a risk of contamination to Langstone harbour because of the deep shafts needed is not right, particularly as there are other more suitable sites.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p><b>1.</b> Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations, the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long-term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p><b>2.</b> Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm</p> |

|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>3. The energy costs to keep the plant running 365 days a year are not a sustainable option. The carbon footprint will be massive.</p> <p>4. Southern water should be looking at more sustainable options i.e developing options that collect winter rainfall to use in dry summers and fixing leaks - 19% of all water that Southern Water abstracts is lost through leaks.</p> <p>5. The plan to tanker water from Norway as part of the drought plan is foolish. I can see a problem with alien plant and animal species being introduced, plus how can you schedule tankers as you don't know when a drought will happen and what an in-efficient way of trying to resolve the problem.</p> <p>6. The environmental impact of concentrated reject water discharge from this plant into The Solent is a big concern.</p> <p>7. Also the impact of adding recycled water into a chalk spring fed reservoir are unknown. It could have a huge impact on biodiversity.</p> <p>Please Stop and have further consultation on more sustainable ways of feeding the new reservoir that are sustainable well into the future and are less energy intensive.</p> <p>Can you please confirm receipt of this objection.</p> <p>I look forward to hearing from you.</p> <p>Best wishes.</p> | <p>strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p><b>3.</b> Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p><b>4.</b> The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Off-line Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p><b>5.</b> Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p><b>6.</b> A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p><b>7.</b> A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. This work will include evaluation of the potential impacts of introducing purified recycled water into a chalk spring-fed reservoir and on associated biodiversity.</p> |
| WRMP883   | <p>Hello : To whom it may concern</p> <p>I am extremely concerned about Southern Water's plans to recycle effluent into the proposed Havant Thicket Reservoir. The reservoir, which is most definitely needed, was granted planning</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>permission on the basis it would be filling from Bedhampton Springs and no doubt some winter rainfall too.</p> <p>Southern Water appear to have changed the plan entirely and are now intending to ship water from the treatment plant at [REDACTED] through 40km of new pipework through the very precious eroding limestone. This is one of the best examples in the country of this geology and extreme caution should be taken. In Three Rivers District planning permission was given for a warehouse which involved extensive piling into an acquifer, and whilst the developer assured that extreme measures would be taken to prevent any contamination and damage, the River Colne has already experienced a serious pollution incident which is being investigated by the Environment Agency. This work is on a small scale, compared to what is being proposed by Southern Water. Mistakes will be made and the results everlasting. Do not allow such a national treasure to be destroyed.</p> <p>Southern Water are also proposing to import water from Norway in times of drought. This is exceptionally concerning too, and should never be permitted. The risk from invasive species, a change to water chemistry, disease transmission not to mention the carbon cost are too great a risk to allow.</p> <p>Given the extensive winter rainfall we are experiencing as a consequence of climate change we need more properly considered storage solutions. We only save 1% of rainfall, and 25% of Southern Water's output is lost to leakage. So Southern Water should be made to store more and stop the leaks, using the existing systems to transport water.</p> <p>Finally we supported the Havant Thicket reservoir on the basis that is needed, and our water supply was going to come from Bedhampton Springs. Now it turns out we will be drinking recycled sewage, which with the best treatment in the world will be unable to remove the horrific amount of forever chemical in our water. The Clean Harbour Partnerships citizen Science projects has revealed more than 50 chemicals in the local harbour waters. Clearly these are not being screened through the treatment, so will the new water treatment plant be 100% confident it will be able to remove them. The risk to health if this goes ahead is huge, and will result in a huge cost to the NHS. A problem caused by Southern Water - why should the taxpayer foot the bill?</p> <p>I would urge you to put huge pressure on Southern Water to find a safe solution for residents and the environment. This proposal is dangerous to all.</p> <p>Kind regards</p> | <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>The majority of the pipelines will be installed using trenches across farmland. In other locations, such as populated areas or where there are particularly sensitive environmental constraints, trenchless techniques will be used. Installation of the pipelines would be controlled by various management plans, including a Construction Environmental Management Plan.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |
| WRMP885   | <p>Dear Water Resources,</p> <p>I am writing this regarding the proposed plan to recycle sewage in Hampshire county for use as drinking water.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Thankyou for reviewing our rdWRMP24 and providing feedback.</p> <p><b>a.</b> Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response |           | <p>I have worked in environmental health, environmental toxicology and chemistry and research on compounds not removed by sewage treatment. I have worked in this field all over the world since 1988.</p> <p>There are a several key issues around the proposed project that present huge problems:</p> <p>a. Recycling of sewage is done elsewhere, but these countries do not already have water sources, such as abundant rain. The technology required to get the water to a drinkable stage is energy-intensive and technical.</p> <p>b. The reverse osmosis proposed to remove the remnant contaminants after traditional sewage treatment does not remove 100% of the compounds that have effects at low concentrations and persist in the environment.</p> <p>c. The location for this treatment plant is on a historical landfill. To build anything on a historical landfill, a lot of drilling down through the landfill is required to ensure the varied settling known to occur on landfills does not damage the buildings. This drilling will be through unknown material potentially containing PCBs, DDT, old batteries, or any other toxic compound that could enter the surrounding waters. In addition, tunnelling through many areas of the landfill will have negative environmental and community impacts.</p> <p>d. The location is also a problem because it is 40 km from where the water will be used. Once again, you have an energy-intensive problem of pumping the water constantly.</p> <p>e. The treatment is presented as a solution for removing persistent organic pollutants known to have ecological and human effects. However, it won't because the concentrated solution of chemicals that the RO membrane will filter out is going to be released from the SW sea outfall. The plume map of these releases has been shown to reach the bathing waters off Hayling and the harbours. In addition, windsurfers, kites and wingers frequent the water around this outfall. There is also wildlife out there that will be affected by the concentrated toxic slurry.</p> <p>f. There are several other options, such as using more reservoirs or subterranean aquifers to store the abundant rainwater, that are currently ignored.</p> <p>g. The infrastructure required to implement this system is enormous and extremely expensive. The other options are cheaper.</p> | <p>million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p><b>b.</b><br/>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.<br/>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p><b>c.</b><br/>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p><b>d.</b><br/>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p><b>e.</b><br/>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p><b>f.</b><br/>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p><b>g.</b></p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP886   | I absolutely do not consent to this. It is disgusting, they're already destroying our seas and now want something which was meant to be for spring water- they want to contaminate that too. Vile. I do not consent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback. Your objection to the use of recycled water in Havant Thicket has been noted.</p> <p>A key benefit of the reservoir is the ability to store recycled water ahead of and during a drought. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| WRMP887   | <p>I wish to express my concern regarding the Southernwater plan to mix Recycled Waster water with drinking water stored in the new Thicket reservoir at Havant.</p> <p>Southernwater do not have the capability to adhere to regulations and standards as they have consistently demonstrated over the past years. Their performance fails to improve.</p> <p>The risk of contamination is far too high. Has the probability of pollution in the reservoir due to Recycled Water being added been modelled and analysed independently?</p> <p>Has there been thorough analysis of the benefits of recycled waste water versus a less risky option of just desalination, as and when required.</p> <p>Southernwater seem very keen to implement recycled waste water processing as a means of relieving the need to apply for Drought Permits.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |
| WRMP888   | <p>As a resident of Havant. I am still concerned that Southern water intend to pollute the new reservoir being built by Portsmouth Water with sewage and pay to import water from Norway to dilute the sewage.</p> <p>Southern Water are now also intending to pollute the new Havant Reservoir and rivers in Sandown in the Isle of Wight and Littlehampton.</p> <p>Langstone Harbour has been overused for dumping raw sewerage until the harbour was recently monitored and have reduced their output, although any dumping of raw sewerage is too much</p> <p>We pay and have paid for years to Southern Water to treat our sewerage. Not give money away to share holders or big salaries for poor management.</p> <p>They now want to charge us more to renew their treatment facilities.</p>                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p>                                                                                                                                                                                                                |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>Why have they not done this earlier, they know population generally increases producing more waste.</p> <p>Please do not allow Southern water to pollute a good source of water for the Havant and wider area</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a><br/> Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> |
| WRMP889   | <p>I strongly oppose this revised proposal for many reasons.</p> <ol style="list-style-type: none"> <li>1. It would waste enormous resources for water transference, pre and post water treatments, for storage and for delivery to homes. Worse when you include the carbon footprint transporting water from Norway which could compromise national water security.</li> <li>2. Vast areas of land and water would be disturbed during and around the pipeworks, development, treatments and storage. Adding to all the deforestation around the Thicket reservoir, housing and other infrastructure locally.</li> <li>3. The proposal would allow several boreholes to be driven directly through old waste landfill at Broadmarsh. This landfill lies over a concealed chalk river and already leaches into SSSI areas. While SW have discharged sewage into Langstone 1114 times just to October 20 this year.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2. We are no longer including sea tankering within our plan.</li> </ol> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated. Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>4.<br/>There are other more sustainable and sensible options which would be quicker and easier to develop, be less intrusive and damaging to eco systems, and certainly cheaper and more reliable for the future, if sited differently and nearer to the river mouth.</p> <p>5.<br/>Southern England is surrounded by water, and has plenty of rainfall which could be harvested in Aquifers, water towers and reservoirs. Water butts as a trial in gardens, have shown they helped considerably on the Isle of Wight. Natural gardens all help absorb excess water, filter and cool without overloading drains.</p> <p>6.<br/>It is extremely worrying about the content and quality of water entering and leaving the reservoir. Many species rely on a stable pH, and temperature, and won't tolerate a mixture of chemicals, heavy metals, viruses or PFAS depending on what is permitted in the reservoir water will determine if organisms thrive, survive or die out. What if water from Norway accidentally transfers non native species here.</p> <p>7.<br/>The extensive pipework will increase risks for leaks and saline will have negative impact esp on Victorian pipes already known to leak.</p> | <p>3&amp;4. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>2. 5.Despite perceptions that the South-East of England receives high volumes of rainfall, it is nonetheless classified as an area of 'serious water stress', see <a href="#">here</a>. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>6. Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other</p> |

|           | <p>8.<br/>Water monitoring will make bills fairer. Those with swimming pools, hot tubs or who waste water should rightfully pay more.</p> <p>9.<br/>Perhaps more could be done to capture grey water. More green roofs, living walls, natural grass instead of plastic and greener towns and cities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>elements of the Full Advanced Treatment process provide robust removal of impurities including “forever chemicals” in the purified recycled water produced.</p> <p>7. The new pipes constructed as part of the HWTWRP project will be new and subject to much lower rates of leakage than older pipes.</p> <p>8. We agree that metering is the fairest way to charge for water and already meter the vast majority of our customers. In addition, we plan to conduct tariff trials once our smart metering plan is implemented and we have a better understanding of the way demand varies daily and seasonally along with key household attributes (property type, household composition, socio-demographic variables etc). This will help us select a representative sample as well as an appropriate tariff model (rising block, reducing block, seasonal) to test.</p> <p>9. You may be interested in <a href="#">Clean Rivers and Seas Plan   Southern Water</a>. In addition, we provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This will also require the entire housing stock across our supply are to undergo modifications in internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level.</p>                                                                                                                                                                                                    |
| WRMP890   | <p>I am writing to object most strongly to Southern Water's Resources Management Plan proposal of recycling effluent water for domestic use.<br/>It appears that SWs plans are the most expensive of a number of options and that these cheap options have not been fully evaluated or seriously considered.</p> <p>The current plan seems to be the most environmentally damaging option as it involves, amongst others, a need to lay a pipeline for many miles through East Hampshire. This would, apparently, involve damage to the South Downs National Park. Less environmentally intrusive options seem to be available involving better rainwater capture.</p> <p>The Southern Water plan is also aesthetically unacceptable. The population expects clean, healthy and palatable water sourced 'naturally' not from effluent, presumably sourced from accessing the public drain and sewage system. no matter how wonderfully treated, there is the knowledge that what we are bathing with and drinking is, in effect, cleaned up sewage. And what happens when a purification breakdown occurs? I leave that to your imagination.</p> <p>Can Southern Water be trusted to behave in an ethical and transparent way? The answer seems to be NO. Recent history indicates that its, as well as other water companies priorities, lay in satisfying its shareholders rather than managing its responsibilities to its customers. It would appear the SW has deliberately limited access to important documentation regarding this project and has only publicly displayed it's plans at the SW headquarters thus denying most of their customers a chance of scrutinising what they want to do.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated.<br/>Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> |

|           | Any plan for managing 'life necessary' resources that will have implications for many generations to come have to be implemented only following the closest scrutiny in terms of social, financial, environmental, health and overall public welfare grounds. This project does not appear to me to come anywhere near qualifying in any of those areas, I therefore urge you, as custodians of this part of our future, to throw this plan out and thoroughly review any further proposal from this company.                                                                                                      | <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP891   | <p>I object to Southern Waters draft plan for future water demand as it is definitely not a sustainable solution for the future and, in my opinion, seems to have been devised to increase their profit associated with unnecessary development of capital assets. I also have no confidence in Southern Water providing an operational effluent recycling plant in the proposed timescale.</p> <p>It is important to consider that only 1% of rain water is captured for consumption purposes and that 19% of the captured water is lost due to leakage.</p> <p>I suggest there are better solutions such as:</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. Ofwat regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>Regarding storage of rainwater, our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>a) Move the abstraction in the Rivers Ardur and [REDACTED] to the tidal limits in order to obtain more water and at the same time protect the river ecology. All river abstraction should be moved to the lower catchment areas.</p> <p>b) Investigate and install more aquifer storage solutions. Using the excuse that water supply may not be available during times of drought is bad planning or perhaps a means of putting off solutions until it allows a more profitable, but unsustainable, solution to be proposed. This type of approach should not be permitted by the UK Government.</p>                                                                     | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It is worth noting, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>a) We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |
| WRMP892   | <p>I am responding to your consultation about the proposed effluent recycling plan of Southern Water.</p> <p>It seems to me to be a complete waste of money to dig up so much of nature, pump uphill at great cost and to put facilities pile driven into a waste dump which will cause so much pollution. I am a sea swimmer and I do not think this plan will help despite all the investment. I do think the tap water I drink will never be so clean as from a reservoir fed from a natural source.</p> <p>The disturbance is going to affect so much wildlife such as the Brent geese. Please reconsider and look at the other options, starting with fixing leaks.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. Water quality impacts in the reservoir and in the reject water released is also part of</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

This is expected to be submitted later in 2025.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP893   | I'm concerned that you're company is not only breaking the law, but also giving the government the runaround, not giving a rats arse for what the public thinks,& that you put your share holders above everything else including the environment!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>Ofwat regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP894   | <p>The original plan for the new reservoir at Havant Thicket must be retained. There is no need for recycled effluent to be added to the natural water being retained at this site.</p> <p>Please make sure that Southern Water's ridiculous and unhealthy plans do not take place.</p> <p>Portsmouth Water do not need additional recycled water added to their supply.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP895   | <p>As a resident of Hayling Island I object to Southern Water's revised plan to recycle sewage into the proposed Havant Thicket reservoir. I feel there are better alternatives such as storing more winter rain in reservoirs &amp; aquifers for use in dry summers.</p> <p>This plan goes against the Local Planning Authority consent for construction of the reservoir and operation which is conditional on the reservoir being filled with 'raw water' sourced from the company's local chalk-fed freshwater springs.</p> <p>There is plenty of winter rain, to provide plenty of water, otherwise why would Southern water be discharging sewage onto our local beaches so often?</p> <p>There is a large trust issue here. Up until recently, we expected to get water from out of our domestic taps which was safe for young and old alike. Now we find that all water sources have some level of PFAS which have been linked to cancer, kidney disease, liver problems, immune disorders, birth defects and other serious health problems.</p> <p>There will be an enormous carbon impact during construction of the facility and pipelines to and from the reservoir. The facility will need to operate all year round, not just during a drought as the membranes will need to have a constant flow of water to maintain the membranes. This will mean energy wasted all year, not just during a drought.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket</p> |

|           | <p>There will be an environmental impact as people realise their drinking water is being changed from chalk stream water to recycled sewage. Many will opt to change to bottled water which will have a huge impact on plastic bottle usage.</p> <p>There seems to be no provision of the publication of test results of tapwater in the areas affected online so we will be possibly be paying more to imbibe eg more PFAS, forever chemicals, without being aware of the danger. There are already several sites of high PFAS around Portsmouth, so having sewage cycling back from higher areas into chalk stream waters seems like a very bad idea. See <a href="https://www.eea.europa.eu/en/european-zero-pollution-dashboards/indicators/treatment-of-drinking-water-to-remove-pfas-signal">https://www.eea.europa.eu/en/european-zero-pollution-dashboards/indicators/treatment-of-drinking-water-to-remove-pfas-signal</a> for map of sites. While the potential of various technologies to remove PFAS from drinking water has been widely demonstrated in the laboratory or in pilot projects, they have not yet been proven to remove the full range of PFAS in drinking water when used more broadly, so once you have contaminated the reservoir, it is toxic forever.</p> <p>Please look again at the true environmental impacts of this revised plan and refuse permission.</p> | <p>reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> |
| WRMP896   | <p>I have read the documents and their analysis, and noted the arguments put forward by Friends of the Earth Havant.</p> <p>Thank goodness these environmental concerns are being raised, as well as concerns about the costings.</p> <p>All aspects of these proposals will impact on the population served by Southern Water, as well as more local providers like Portsmouth Water</p> <p>I do not have the expertise to evaluate the findings, but as a lay person I can tell you about the impact that Southern Water's practices have had on me and my family.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability, environmental impact and costs are key criterion for including options in our plan.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>1. We did not swim in the sea at Southsea this year, as there were repeated releases of sewage throughout the summer - heavy rainfall or not.</p> <p>2. This year we have noticed a deterioration in the quality of our drinking water. We have now bought a jug water filter but are concerned about the plastic waste from the replacement filters.</p> <p>3. Bottled water may be our only alternative.</p> <p>Please make a robust examination of this plan, and work together to implement a better solution which will not have negative impacts on the environment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p><a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>1. As set out in our 2023-24 annual report water quality compliance at our reservoirs is currently at 99.9%. We strive to improve this and are regulated by the Drinking Water Inspectorate (<a href="http://www.dwi.gov.uk">www.dwi.gov.uk</a>).</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP897   | <p>My concerns about SW plans are summarised below:</p> <p>Effluent recycling was proposed primarily as a drought resource, yet Southern Water have indicated that they will operate the plant and pipelines at a capacity of 30 million litres every day. Think of the huge amount of treatment chemicals and energy that will be needed to treat and pump what is 12 Olympic sized swimming pools of water everyday 40km to [REDACTED] even when it is raining and we have plenty of water.</p> <p>Note: To keep the treatment plant and pipelines in operational order Southern Water must operate the plant at a minimum flow of 20Ml/day (8 Olympic size swimming pools).</p> <p>Southern Water have confirmed that the effluent recycling treatment plant alone will use energy at a rate of 0.95kWh/m3, with the additional water treatment still needed at the [REDACTED] works taking 0.457kWh/m3 (1m3 = 1000 litres and they plan to treat 30 million litres per day). The energy consumption and cost of treatment for the recycled water are therefore 3 times higher than that of conventional river water treatment.</p> <p>That does not include the costs to pump the recycled water 4km to Havant Thicket Reservoir, nor the cost to pump the mixed water 40km to [REDACTED] which must be huge, given a 90m vertical height rise just to the top of Portsdown Hill. Southern Water have previously said they cannot provide the energy figures for pumping water along the pipelines. Given that the daily energy cost of water pumping will be extremely high how have they determined that this is a 'best value' solution for their customers without this information.</p> <p>As part of our Summer 2024 Consultation, we shared our preliminary assessment of carbon emissions associated with the Hampshire Water Transfer and Water Recycling Project. This was based, in part, on energy usage information for the project. An updated carbon emissions assessment will be provided as part of our Development Consent Order application. The energy usage information used to support that will be appended to the assessment.</p> <p>Energy security is already a significant concern in the UK, selecting and developing high energy solutions to meet our water supply needs will just add to the national &amp; regional problems, and those of the planet.</p> <p>This is not a sustainable way forward.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP898   | <p>I object to Southern Water plans for a water recycling plant near Langstone Harbour.</p> <p>I don't believe SW have done proper work to develop a range of options. In particular:-</p> <p>Aquifer Storage of water during times of glut.</p> <p>Moving water abstraction to the mouth of the rivers (that may be called "tidal reach point")</p> <p>Additional reservoirs</p> <p>Leak reduction actions</p> <p>Water use reductions measures. (Not sure there is "off peak water" but the energy utilities may have something to learn from here. They even subsidise more efficient boilers and insulation. What's the water equivalent?</p> <p>I believe their option of tankering water from Norway demonstrates their lack of complete review of the options available and their complete disregard for the environment (and the size of customer bills).</p> <p>Further I believe SW cannot be trusted with the environment cf. their record with sewage discharge. Building the works would have unacceptable environmental impact and risk leakage from historic waste dumps they plan to build upon into the harbour. Unmanaged and unknown dirty water release is almost certain given their track record. They cannot be trusted to self measure and self regulate. I am confident you will find a long list from environmental groups. We all have favourite sources but if you want somewhere to start try <a href="https://havantmatters.org/">https://havantmatters.org/</a></p> <p>It seems to me SW are incentivised by their statutory set up to build infrastructure rather than repairs and innovate (as examples). They want a billion pound plus plant rather than a "few" 100 million reservoir for financial reasons not water supply reasons.</p> <p>Further - they are owned by Macquarie. Didn't they take Thames Water to it's knees by taking excessive dividends and load the company with debt?</p> <p>I believe SW are using water consumption predictions (and changing them to suit) to support their case. Even a previous Director (Bill Sitting) opposes the plan. (Source <a href="https://www.theguardian.com/environment/article/2024/jul/13/12bn-plan-to-turn-sewage-waste-into-drinking-water-branded-a-dangerous-white-elephant">https://www.theguardian.com/environment/article/2024/jul/13/12bn-plan-to-turn-sewage-waste-into-drinking-water-branded-a-dangerous-white-elephant</a>)</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> |

|           | <p>Please reject this proposal and ask SW for a comprehensive review of alternatives and to bring back proposals including the suggesting I have made as a minimum.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |
| WRMP899   | <p>I attended a meeting recently at Merchistoun Hall, Horndean about the above proposal.</p> <p>Please record that I object to Southern Water recycling effluent water for drinking, washing and general public use.</p> <p>I am appalled that Southern Water are considering this as an option. Please read my following points:</p> <p>1) This is a backward step for the environment and biodiversity.</p> <p>2) Most probably will cause a surge of people buying bottled water to drink which will increase household bills, increase carbon footprint and moreover damage our precious planet.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>We note your objection to the water recycling scheme.</p> <p>1) Southern Water is developing four water recycling plants across our region and several other water companies are also planning to use the technology to help reduce abstraction from the environment and maintain public supplies. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | 3) No public consultation has been made in all areas which would be affected by Southern Water to raise awareness to this proposal.                                                 | <p>further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>2) Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>3) With regards to your comments about the consultation: In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |
|           | 4) The plant does not have longevity.                                                                                                                                               | <p>4) With regards to your concern about lifespan of Havant Water Recycling Plant, we are planning to build new reservoirs where feasible (see below). However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|           | 5) The plant would cost a huge sum of money.                                                                                                                                        | <p>5) We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|           | 6) The plant and pipes would cause considerable damage to wildlife and detrimental to the future of biodiversity. For example the birds at [REDACTED] would not return for decades. | <p>The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|           | 7) The building of such an enormous plant would cause congestion and safety to the general public.                                                                                  | <p>6) We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|           | 8) As far as I am aware no other water supplier in the UK has or is pursuing this form of clean water supply.                                                                       | <p>7) We note your objection to the risk of congestion from building the plant.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|           | 9) The UK has a very high amount of rainfall, why do we need to recycle effluent water?                                                                                             | <p>8) Other companies in the UK are either exploring or planning to develop water recycling options. For example, Thames Water is an option called Teddington Direct River Abstraction. This is a new abstraction from the river that is supported by water recycling.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|           | 10) Reservoirs are cheaper and last longer and will not damage our precious chalk streams.                                                                                          | <p>9) Regarding your suggestion about rainfall capture, in addition to reservoirs (considered above), we also promote the use of water butts, including offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|           | 11) The general public have not been informed about this.                                                                                                                           | <p>10) With regards to reservoirs: Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

--------------------------------------------------------------------------------------------------------------------------------|
|           | <p>12) Residents of the area have not seen any evidence about the long term affects drinking and using effluent water will have on humans and animals (many households have pets) including the mammals, insects, birds that live in the region.</p> <p>13) People who are immunocompromised, elderly, unwell, pregnant, children - no evidence has been shown if this could make them more ill/cause diformity.</p> <p>14) The NHS is already under extreme pressure long term affects of drinking and using effluent recycled water will impact on the NHS resources.</p> <p>15) How can Southern Water suggest to ship over container ships of water from Norway as environmentally friendly?</p> <p>16) The ships may not be able to dock at Southampton at short notice due to all the cruise ships.</p> <p>17) The carbon footprint of transporting the water is astronomically huge.</p> <p>18) The water from Norway does not have the same minerals as this area.</p> <p>19) The [REDACTED] area of household waste was not secured from leaking. There is no guarantee that the many pipes drilled into the ground through the waste will not leak. This in turn will cause waste to enter into the clean water system.</p> <p>20) Pipes which will run next to the river Test could over a time become weak and leak, this will cause the dirty water to contaminate our unique chalk rivers and streams. In turn killing fish and wildlife.</p> <p>21) The water will taste different and the Havant Spring water will be irreovocably changed as minerals removed in the recycling process will not be replaced.</p> | <p>reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> <p>11) See response for 3)</p> <p>12) A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations. No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales.</p> <p>13) The legal standards for drinking water are set down in The Water Supply (Water Quality) Regulations 2016, which include schedules of parameters which water companies are required to monitor to verify drinking water safety. These standards are very strict and are enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales.</p> <p>14) As mentioned above in response to point 13, all water we supply will meet strict safety standards.</p> <p>15) The purpose of sea tankering is to reduce the amount of water we would need to take from the River Test during a severe drought, helping to protect this fragile ecosystem. Reducing abstraction from rivers is part of the Government's 25-year Environment Improvement Plan and you can read more about how we are trying to protect the River Test in our Drainage and Wastewater Management Plan (DWMP) for the Test and Itchen River Basin Catchment. However sea tankering from Norway also had associated environmental risks and this option is no longer included in our plan.</p> <p>16) Our initial feasibility work on this option suggests that tankers of the required size will be able to dock at Southampton and we have engaged with the port to discuss the marine operations that would be co-ordinated by the port.</p> <p>17) As part of our role to protect and enhance the environment, we are committed to reducing carbon. You can find out more about our carbon policy here: <a href="https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/">https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/</a> . We aim to deliver net zero carbon by 2050 and we are expanding our carbon accounting processes to measure the impact of our capital delivery programme. Sea tankering from Norway is no longer included in our plan.</p> <p>18) With regards to the chemical composition of water brought in by tanker, this option is no longer included in our plan.</p> <p>19) Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We will deliver this option in a way that means there is no contamination of the environment or of drinking water. All water we supply will meet strict safety standards as monitored by the Drinking Water inspectorate (DWI). We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |

|           | <p>22) Household bills will increase to help pay for the plant. The general public are already under immense financial strain to pay current bills.</p> <p>23) Concern that agreeing to Southern Water proceeding with this humanitarily dangerous concept will then "open the gates" for all other UK water authorities to do this too.</p> <p>24) Danger of the UK becoming too reliant on a very poor and damaging concept which will have serious long term affects to peoples lives.</p> <p>25) Poses serious risks to Langstone Harbour and the Solent.</p> <p>26) There are other options that Southern Water have not considered such as reservoirs and Aquifers for instance.</p> <p>Please consider all my points fully. We are extremely fortunate to have our chalk rivers and streams/ponds in the area. I am led to believe we are the only place in the World which has this unique environmental legacy.</p> <p>I would like to be kept informed of the outcome of this proposal and would strongly hope it will not proceed.</p> <p>We need to find more environmentally and economic ways of collecting and storing our rainwater which should not include recycling effluent when we do not know the full impact in could have on future generations of human and all other living life.</p> | <p>20) We would not expect newly laid pipes to have any significant leaks for many decades. Should these new pipes ever start to leak in the future we will fix them as quickly as possible. This is part of our company wide aim to reduce total leakage by 53% by 2050. This is a higher reduction than the 50% Government target for sector wide leakage reduction.</p> <p>21) Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink.</p> <p>22) We are fully aware of the impact of our planned future investments on customer bills. We offer support to our customers who face difficulty in paying their bills (<a href="#">Need help paying your bill? Find out how we can help.</a>) and over the next five years we will be offering discounts of 45% or more to 182,000 homes.</p> <p>23) With regards to your concern that this plan will 'open the gates' to other UK water authorities to conduct effluent recycling. Our Water Resources Management Plan, like other Water Companies, not only has to look at the water needs for the next 5 years but also needs to look ahead as far as 2075. This means gathering an understanding of the potential changes to the water supply need and impacts from climate change and population growth. Therefore, all water companies now need to consider water supply and storage options that have not been traditionally used, such as water recycling and desalination. We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding a sustainable water supply into the future means we need to look at all viable schemes and will have to make decisions with the support of our national Government and industry regulators which benefits all society. We are confident that our plan follows the National Framework, Water Resource Planning Guidance and other supplemental policies to not only secure a water supply but to also add to wider environmental and social benefits.</p> <p>24) All water we supply will meet strict safety standards as monitored by the Drinking Water inspectorate (DWI).</p> <p>25) With regards to your point 25, we a further consultation on water quality and environmental risks will be held in 2025.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>26) A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |
| WRMP900   | I am emailing to state three of the objections that I have to the Southern Water revised draft Water Resources Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>a) Why should the planned reservoir for Havant need to have treated effluent pumped into it? The original permission was granted to Portsmouth Water for a reservoir to be built that contained spring water. Southern Water (SW) is unable to conform to current regulations regarding the drainage of sewage into rivers and lakes. What guarantee would there be that greater amounts of effluent would not be introduced, causing more harm to the recipients of the water and to the local bio diversity?</p> <p>b) The proposal that eight tankers of Norwegian water should be shipped to Southampton continuously if extraction of water from the rivers Test and Itchen was unavailable to SW is laughable, if the matter wasn't so serious. In the winter months the UK has a surplus of water. Why should we need to import it?</p> <p>c) Another proposal is to pump water from the Havant Thicket Reservoir to [REDACTED] this would supply the Southampton and Winchester areas with drinking water via a 40Km pipeline whose construction would raise carbon levels significantly and destroy natural habitats, with an estimated annual running cost of £3 million.</p> <p>Below are some alternative suggestions that should be considered:-</p> <p>a) Aquifers should be adapted to store surplus rain water to use in times of drought.</p> <p>b) SW should begin a comprehensive programme of repairing water mains to stem the loss of 19% of the water that is currently lost.</p> <p>c) If the [REDACTED] abstraction to the tidal limit could be moved, this would be a better, more robust and sustainable solution to protect the whole of the freshwater catchment and restore natural flows in a drought. (The SW Technical Report does not mention that this option has even been considered.)</p> <p>There are many more objections that I have, but your time for reading will be limited. Please think of the consequences to our water supplies and the harm to future generations that could arise should this plan be approved.</p> | <p>a) Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. The scheme will reduce our reliance on internationally protected rivers, the Test and the Itchen, during drought and provide a more reliable and sustainable source of water in the future. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TPCA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>b) Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects. Water recycling inevitably uses more energy and as a consequence will be more expensive than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Alternative suggestions:</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | the duration of abstraction and water quality. We will be exploring them further for our next plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP901   | <p>I am concerned about Southern Waters effluent recycling plant that has been proposed to be built at [REDACTED] Havant in Hampshire. The plans are to feed the recycled water into Havant Thicket reservoir. There seems to have been a change of use of this reservoir. Initially Portsmouth Water were going to feed water from the chalk streams into the reservoir for storage for use in periods of drought, but Southern Water seem to have taken over this project for their use.</p> <p>The plant has been agreed as a National Significant Infrastructure Project, but there are concerns about the cost of running the plant and its environmental impact.</p> <p>To recycle the water it undergoes reverse osmosis, an energy heavy process that will cost £3m a year in energy usage. Because of the technology used, this has to be active for 24 hours, 365 days a year. The argument from Southern Water is that it will create a resilient and sustainable water supply for southern England. Southern Waters warning for not progressing with this plant is to transport water from Norway. Frankly an absurd solution, also the water from glacier run off is too acidic and will have an effect on the biodiversity in Hampshire. Southern Water argues that they will continue to abstract water from the chalk streams while waiting to get permission to build the recycling plant with resulting increase in pollution. Also a major environmental disruption is the 40 km pipeline that will have to be laid from Havant Thicket to [REDACTED] water processing plant.</p> <p>The solution to this problem is solved if the abstraction is taken from the river Itchen at the tidal limit at [REDACTED]. Also managed Aquifers in delivering ground water require minimum infrastructure.</p> <p>The documents relating to this effluent recycling project are restricted to the public and the appraisals of key environmental assessments are restricted as well</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and our Hampshire Water Transfer and Water Recycling Project (HWTWRP) will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p> <p>Portsmouth Water's planning permission for Havant Thicket Reservoir (already granted and with construction underway) is separate to HWTWRP, which is still at the pre-application stage of the Development Consent Order process. HWTWRP would be an addition to the already consented reservoir. Reservoirs are a crucial part of a resilient water supply network but are not always enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach to ensuring future water supply is to use water recycling to supplement the reservoir and ensure a ready supply of water that does not need to be taken from the environment.</p> <p>Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reasons already outlined above, those conventional sources are no longer available to us. To address the potential environmental impacts, including increased energy usage, of HWTWRP, we are undertaking a range of environmental assessments as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a>. The report details the preliminary findings of our environmental assessments based on the information available to date. The environmental assessments will continue to be updated and will be documented in an Environmental Statement that will be submitted as part of the Development Consent Order application.</p> <p>Regarding the pipeline, impact from construction of the pipelines will be temporary and all land used for the construction of pipelines will be reinstated. The majority will be installed using trenches across farmland. In other locations, such as populated areas or where there are particularly sensitive environmental constraints, trenchless techniques will be used. Installation of the pipelines would be controlled by various management plans, including a Construction Environmental Management Plan. As above, the EIA process will identify and seek to either avoid, mitigate or compensate any environmental impacts arising from the construction of the pipeline.</p> |

For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Regarding documentation associated with HWTWRP, everything that has been finalised and/or made available for public consultation, is available on the project's dedicated website <a href="https://www.hampshirewtrp.co.uk">https://www.hampshirewtrp.co.uk</a>. Some documentation is not yet available as it is still being prepared ahead of the DCO application, which we anticipate will be submitted to the Secretary of State later in 2025.</p>                                                                                                                                                                                                                                                                                                                                                               |
| WRMP902   | <p>PLEASE UNDERSTAND THE URGENCY OF PROTECTING OUR WATER SUPPLY FOR YEARS TO COME.</p> <p>WE HAVE SUFFERED ENOUGH WITH ALL THE EFFLUENT OVERSPILLS. THIS IS DAMAGING THE ENVIROMENT</p> <p>Sadly they have just recycled the same old leaky plan, with more effluent recycling, but this time they are also proposing to tanker water all the way from Norway to Southampton in a drought to plug the gap in their plan to 2035!</p> <p>I know it's unbelievable, even SW previously rejected tankering from Norway as a stupid idea (very expensive &amp; environmentally unsound, with the risk of importing non-native species), but rather than look at more sustainable options that might undermine their case for recycling effluent that is their new plan.</p> <p>In the UK we only collect 1% of rainfall. We need a better plan that works with climate change to collect more water in the predicted wetter winters and to store it for use in drier summers, using underground confined aquifers and by building new reservoirs. Instead, Southern Water propose energy &amp; carbon hungry effluent recycling. The plant will be located on an old landfill site on the coast at Broadmarsh (Havant), with piling and tunnelling putting Langstone Harbour at risk from leachate. We need a radical rethink on where and how the company takes water from the environment, moving it's abstraction points closer to the sea to leave freshwater in our precious chalk streams for longer.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding sea tankering, this option is no longer included in our plan.</p> <p>We acknowledge concerns raised about the need for the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment.</p> <p>Regarding storage, our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. A Chalk Managed Aquifer Recharge (MAR) feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and</p> |

|           | <p>It is shocking that SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet their slow programme for improvements means even by 2050 they will still be leaking about 10% of all the water they treat, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious leakage and mains replacement programme they will never get leakage under control.</p>               | <p>they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>We have also considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Regarding the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP903   | <p>I strongly object to Southern Water's recycling plan which will interfere with our drinking water supply which currently comes from Portsmouth Water. Southern Water as a company has a terrible record of not adhering to the discharge rules, how can they be trusted to recycle properly? Why are they not focussing on dealing with the ridiculous amount of leakage they currently have? Why can't they collect more of our rainfall? They should be made to perform their current responsibilities properly before going ahead and messing with our water supply from Portsmouth Water.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a>. Regarding the safety and efficacy of water recycling, all water companies' provision of public supply is regulated by the Drinking Water Inspectorate, and further information can be found on their website; <a href="https://www.dwi.gov.uk/water-recycling/">https://www.dwi.gov.uk/water-recycling/</a></p> <p>Purified recycled water is water that has gone through a series of advanced treatment techniques before being pumped into a river, lake or reservoir – from where it can be taken</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                                                                                                              | <p>and treated to strict drinking water standards before being sent into supply. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by the Hampshire Water Transfer and Water Recycling Project (HWTWRP). We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term.</p> <p>Our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. A Chalk Managed Aquifer Recharge (MAR) feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP904   | Hi, I think the reservoir is a good idea but I'm against the sewage recycling as our water in the Portsmouth water area is great quality. Portsmouth water has said it will taste different and I don't want that to happen. | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Your objection to the use of recycled water in Havant Thicket has been noted. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| WRMP905   | I object to Southern Water's revised plan and demand a better more sustainable way forward by selecting options that work with climate change to store winter water .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |
| WRMP906   | <p>I was very upset to discover the unpublished news that Southern Water are planning a very environmentally unfriendly and expensive infrastructure plan to build an effluent recycling plant on an old landfill site at Broadmarsh, Havant. There is a big environmental impact of its construction and high risk of causing contamination into the harbour.</p> <p>We have no guarantees that pumping this recycled effluent into the enclosed basin Havant Thicket reservoir will not contaminate this water supply too as water quality monitoring activities can be too late to prevent pollution incidents and look at the appalling pollution records of UK water companies.</p> <p>This extra water supply can be achieved by much more environmentally friendly and cheaper alternatives:<br/>         Fixing leaky pipes (currently 19% of water abstracted is lost this way).<br/>         De-commissioning old Victorian bore holes from Upper Test and Itchen river locations and building new boreholes downstream with much lower ecological impact on the rivers.<br/>         Making Winter Aquifer storage available for summer droughts.<br/>         Further reservoir capacity if needed.<br/>         The whole idea of proposing to ship water from Norway as the only alternative is preposterous.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With reference to publicising the recycling plant proposals, the Hampshire Water Transfer and Water Recycling Project (HWTWRP) has a dedicated website and to date has hosted three separate consultations on this scheme, the first in 2022, the second in 2024 and the most recent in March 2025. Further information about these consultations, and the project documentation and updates, are available on the dedicated project website; <a href="https://www.hampshirewtrwp.co.uk/">https://www.hampshirewtrwp.co.uk/</a>.</p> <p>HWTWRP is just one of the water resource projects/options contained in our Water Resources Management Plan (WRMP). We consulted on our draft WRMP 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>With regard to the site chosen for the recycling plant, this site was selected from the feasible options identified as a result of its suitability and proximity to the source of water to be recycled. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction</p>                                                               |

|           | <p>The selection of effluent recycling via Havant Thicket and transfer (40km) to [REDACTED] is highly energy inefficient.</p> <p>Please take this opportunity to protect our future wellbeing and stop the water companies from further damaging our environment and prosperity.</p> | <p>or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Water quality in Havant Thicket reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our DCO application, which we expect to submit later in 2025. The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including “forever chemicals” in the purified recycled water produced. Regarding the operation of the site, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to nitrate reduction processes at Portsmouth Harbour WTW. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by HWTWRP. We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>A further consultation on water quality for HWTWRP was held in March 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. Documentation in relation to this consultation can be found here; <a href="https://www.hampshirewtwrp.co.uk/consultation.html">https://www.hampshirewtwrp.co.uk/consultation.html</a> including the Environmental Water Quality Report.</p> <p>Regarding leakage reduction, the target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Regarding sea tankering this option is no longer included in our plan.</p> <p>Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reductions in the amount of water we can take from the Test and Itchen rivers, those conventional sources are no longer available to us. In addition, the length of pipeline adds to energy use, but is essential to move water around the network between existing treatment and supply infrastructure. To address the potential environmental impacts, including increased energy usage, of HWTWRP, we are undertaking a range of environmental assessments as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a>.</p> |
| WRMP907   | <p>I am opposed to the above measure by Southern Water. This method does not resolve present leaks or improve sewage systems in relation to the volume of local house-building schemes, which impacts existing local residents.</p> <p>This scheme would serve the island city of Portsmouth of which I am a resident. Southern Water already proposes to increase bills dramatically. It seems they are only interested in lining their own pockets, and those of Shareholders rather than the local environment encompassing both flora, fauna, and local residents.</p> <p>The smell from [REDACTED] [REDACTED] can be unbearable for days at a time, is this scheme likely to have the same impact?</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as the Hampshire Water Transfer and Water Resources Project (HWTWRP). Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. Leakage reduction will help, but alone it cannot resolve the deficit. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>The proposed scheme is on landfill. With proposed tunnelling and piling how safe will this be to flora, fauna and residents?</p> <p>This Scheme is very worrying. What long-term effects are likely to be produced? If Southern Water pumps raw sewage into the sea periodically and can't, or won't, improve this, how effective will their proposals be? Surely they need to rectify the problems they already have before any further "planning" of new schemes takes place.</p> | <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well. Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>We note your comments regarding sewage systems and odour from the wastewater treatment works, however these are matters for our Drainage and Wastewater Management Plan (DWMP) and are not covered by the Water Resources Management Plan (WRMP). As this consultation is for our WRMP which relates to our plan for provision of drinking water we are unable to comment. For further information on sewage treatment please refer to our DWMP which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>On the specific point about odour from this wastewater treatment works we can confirm that the recycling scheme will not alter the volumes of wastewater that are treated at this location. As a result, there will be no impact on odour..</p> <p>Regarding the location of the proposed recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment (EIA). Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |
| WRMP908   | We wish to OBJECT in the strongest possible terms to the Southern Water revised draft Water Resources Management Plan                                                                                                                                                                                                                                                                                                                                                                  | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

----------------------------|
|           | <p>We are residents of Rowlands Castle in East Hampshire and well into our eighth decade. Given the implementation timescales that have been mentioned, we do not expect to be here to see the results of this project were it to be given the go-ahead. However we are fundamentally opposed to Southern Water being allowed to take this project any further as a result of our concern over its effect on future generations not to mention the more immediate cost and impact on the environment.</p> <p>Some of the reasons for our opposition to the proposal are:</p> <ol style="list-style-type: none"> <li>1. One of the main drivers for the project is to provide enough water to sustain the growth in population in the South of England. However we believe this population growth in the area is itself unsustainable since it is creating irreversible damage to the environment as well as intolerable pressure on all services, facilities and infrastructure including roads, health services, schools, power supplies as well as water supply and sewage disposal. The over-riding need is for public policy to recognise this growing problem and take appropriate steps to control it.</li> <li>2. Southern Water has been fined tens of millions of pounds in recent years for causing unacceptable levels of pollution in our rivers and along the coastline. They have shown that they are NOT TO BE TRUSTED to go ahead with a project of this type.</li> <li>3. Whichever organisation is responsible for water supply and sewage disposal should be focussing primarily on: <ul style="list-style-type: none"> <li>Reducing water leaks - we understand that in the year 2022-23 alone over 100 million litres per day were lost.</li> <li>Taking steps to more effectively capture and save the considerable rainfall that we do experience.</li> <li>Tackling the sewage release problem.</li> </ul> </li> </ol> | <p>We note the objection to the use of recycled water in Havant Thicket.</p> <ol style="list-style-type: none"> <li>1. We note your concern (1) about the rate of population growth. However, unfortunately this is beyond the scope for this particular consultation: this consultation is focussed on the Water Resource Management Plan. <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> </li> <li>2. We know our past pollutions performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers. <a href="#">Our Business Turnaround Plan   Southern Water.</a></li> <li>3. With regards to your comment about reducing leakage: The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. <p>Despite perceptions that the South-East of England receives high volumes of rainfall, it is nonetheless classified by the Environment Agency as 'seriously water stressed' (see <a href="#">Water stressed areas final classification 2021.odt</a>). Water stress is defined as areas where household demand is a high proportion of effective rainfall. It applies to both public water supplies and the natural environment, and takes account of the fact that public water supplies are under pressure from reductions in abstraction to make them more environmentally sustainable. There is also a need for public water supply to be more resilient to droughts and to meet additional demands associated with growth and development. The HWTWRP will address these demands by re-using water that</p> </li> </ol> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>has already been used for public supply, rather than taking more water from the environment during times of low flows.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>With regards to your sewage comment, this Water Resources Management Plan consultation is focussed on providing customers with clean potable water. For sewage concerns please see the DWMP (Drainage and Wastewater Management Plan) <a href="#">Our Drainage &amp; Wastewater Management Plans (DWMPs)</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP909   | <p>For more than 10 years as local resident, I have been actively involved in the consultation process involving the local community in the development leading to planning permission for Havant Thicket Reservoir. From that experience, I have been very supportive of the new reservoir for all the environmental benefits that it will deliver. That consultation was extremely detailed and thorough.</p> <p>Notwithstanding all the serious concerns regarding the effluent recycling application, the "██████ Project" it was never tabled at any time during the reservoir consultation. It is now clear that because it was obviously going to be very controversial, it was "held back" until after planning for the reservoir had been approved. This is at best "mission creep" and more likely a cynical attempt to sidestep proper consultation and scrutiny.</p> <p>As it is, SW loses some 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet SW's slow programme for improvements means even by 2050 SW will still be leaking about 10% of all the water it treats, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious leakage and mains replacement programme SW will never get leakage under control.</p> <p>SW's selected best options is high energy, carbon and chemical hungry. SW needs to do more to repair leaks, replace mains, encourage demand reduction from households and non-household users and develop reservoirs and aquifer storage.</p> <p>This is where future investment should be focused, not the ██████ ██████ project.</p> <p>I therefore most strongly oppose the ██████ ██████ Effluent Recycling application.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. We are also aiming to reduce PCC to 110l/h/d under dry year conditions by 2045. This is 5 years ahead of the 2050 target date set by the Government. The leakage target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will continuously monitor the effectiveness of our demand management initiatives and closely follow developments in this area across the UK water sector. If needed, we will modify our approach and adopt new technology to achieve greater demand savings and/or to achieve them earlier.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result,</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |
| WRMP910   | <p>After attending a small locally organised talk on the new Havant Thicket reservoir, I was shocked to learn that Southern Water has sneaked in a draft plan for an effluent recycling plant. I am a customer of theirs and have always lived locally, yet this was the first I'd heard of their Water management plan. Few of us have the time, resources and even awareness to comment or object to their plans.</p> <p>I totally object to any effluent recycling plant, these are for areas with no other water sources, and as a last resort. They are not for areas surrounded by water and with numerous other natural water sourcing options. The way the plan is drafted suggests that this effluent recycling plant is one of only two options for the future, the other being tankering in water from Norway, which is an absurd and misleading suggestion.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent. We consulted on our draft WRMP 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>Regarding the project itself, HWTWRP is classified by the Planning Inspectorate as a Nationally Significant Infrastructure Project (NSIP), and as such, we are required to seek consent from the Secretary of State in the form of a Development Consent Order (DCO). We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           | <p>The location of the proposed plant is very concerning, the area used to be a land fill site and would need to be piled to be built upon, which would create a massive risk of leaching contaminated waste into the Harbour and surrounding areas. Also the idea of 'topping up' the new, raw water sourced reservoir, with recycle effluent is a major concern, based on Southern waters track record, only recently they contaminated the water supply in Winchester and West Sussex, and of course all of their illegal river and sea discharges and their leaky network too. It's not worth the environmental and reservoir water supply risk. Southern Water are now run by the same people who ruined Thames water, financially and otherwise.</p> <p>The plan should be firstly focusing on repairing the current leaky network, with more ambitious reductions, faster. All their 'parked' alternatives need to be favoured, all aquifer storage schemes should be established, total relocation to abstraction points at the the river tidal limits should be made, more raw water reservoirs and desalination should be used as a last resort. I realise desalination is energy heavy, however it's still 50% less energy hungry than a effluent recycling plant would be, pumping a new 40km uphill network.</p> <p>Based on the predicted costs and time scales I was confused as to why Southen water have prioritised this water sourcing over the others, again I was shocked to learn that they can make huge profits out of this type of 'investment'. Labour did promise to stop water companies operating in this way, so by rejecting these plans it will send a clear message and precedent to prove the Government keeps its promises.</p> | <p>expect to submit a DCO application to the Planning Inspectorate in 2025. The DCO process puts an emphasis on consultation and early engagement with stakeholders and communities. In this regard, we have carried out three separate consultations on this scheme, the first in 2022, the second in 2024 and the most recent in April 2025. In terms of local engagement for our consultations, in 2022 we ran a six-week non-statutory consultation (eight weeks in 2024), sending out almost 30,000 letters to those in the primary consultation zone around the Project. We placed half-page colour adverts over three weeks in the Southern Daily Echo, Hampshire Chronicle and The News (Portsmouth), and ran a social media outreach programme that ran throughout the six weeks of the Consultation. We sent posters to parish councils, and other social hubs like churches, community centres and libraries. We also launched a dedicated website which hosted a virtual room. The virtual room afforded the public with the opportunity to view consultation materials without needing to attend an in-person event. We hosted six in person events in proximity to the pipeline corridors and three online sessions across three consecutive weeks at different times to accommodate for different groups. Reference copies of the consultation materials were also located at 9 different deposit points including libraries and community hubs. We made sure to accommodate those who did and did not have access to either the internet or appropriate viewing technology. Further information about these consultations, and the project documentation and updates, are available on the dedicated project website; <a href="https://www.hampshirewtwrp.co.uk/">https://www.hampshirewtwrp.co.uk/</a></p> <p>We note your comment regarding water supply contamination.</p> <p>We acknowledge concerns raised about the need for HWTWRP and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for.</p> <p>In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>With regard to the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We</p> |

|           |          | <p>have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as aquifer storage. As outlined above, reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These additional options will help, but cannot resolve the deficit alone. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish, such as salmon. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Our plan includes a number of desalination plants in our Eastern area. We submitted our detailed assessment of the desalination option on the Southampton coast to RAPID in 2021. We had recommended removal of the option primarily due to the potential environment impacts. RAPID agreed with our assessment. The assessment of our submission by RAPID is available on Ofwat's website <a href="https://www.ofwat.gov.uk/wp-content/uploads/2022/03/Strategic-regional-water-resource-solutions-accelerated-gate-two-final-decision-for-Desalination.pdf">https://www.ofwat.gov.uk/wp-content/uploads/2022/03/Strategic-regional-water-resource-solutions-accelerated-gate-two-final-decision-for-Desalination.pdf</a></p> |

The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP911   | <p>I write with reference to Southern Water's Draft Water Resources Management Plan which is now available for public comment, prior to its review by DEFRA after 4th December 2024.</p> <p>From the local press, social media and conversations with friends, I understand that there is considerable local opposition to Southern water's proposed use of the Havant Thicket Reservoir, given that Portsmouth Water's customers would also receive the mixed water, despite the current Local Planning Authority approval being for construction and operation of a reservoir filled with 'raw water' sourced from the company's local chalk-fed freshwater springs.</p> <p>Having looked at the considerable date available to the public I am very concerned by Southern Water's commitment to the use of recycled sewage effluent. Indeed, the web-site havantmatters.org lists 40 concerns that should be explored by DEFRA's review of this latest WRMP.</p> <p>Personally I was shocked to read that SW loses 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet their slow programme for improvements means even by 2050 they will still be leaking about 10% of all the water they treat, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Therefore, without a more ambitious mains replacement programme now and in the very near future they will never get leakage under control!</p> <p>Of great concern also is that the plan does not strive to work with the predictions regarding climate change and doesn't seek to capture more winter rain for use in dry summers. Rainwater provides a good quality free raw water resource and we need to prioritise schemes that capture and store it for dry summers</p> <p>Given the points made above I write, therefore, to ask that, as my Member of Parliament, you use all measures at your disposal to ensure that DEFRA takes full cognisance of the '40 concerns' in its forthcoming review.</p> <p>Thank you in advance for your support in this matter.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We acknowledge concerns raised about the need for the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as aquifer storage. As outlined above, reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These additional options will contribute, but cannot resolve the deficit alone. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding additional storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs; the Havant</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP912   | <p>As part of the consultation process we are writing to object, in the strongest possible terms, to Southern Water's proposal to use allegedly treated sewage waste water as a means of supplementing the water supply to the new Havant Thicket reservoir. As an initial point it is worth noting that Southern Water have singularly failed to raise public awareness of their proposal, no doubt concerned at the negative reaction such a plan would undoubtedly raise. Our concerns, and those of many other residents served directly or indirectly by Southern Water, are on many levels and whilst we are not in anyway technically minded and do not propose to argue the scientific feasibility of the Reverse Osmosis process, for ordinary residents like us it is simply wrong and potentially a disaster waiting to happen.</p> <p>We would expect that DEFRA would take account of the following points:<br/>Despite the fact that the water quality from the sewage treatment plant at [REDACTED] is already expected to deteriorate over time, as admitted by Southern Water, this water authority has no plans to improve the situation. How can they then think it is viable to pump "treated sewage water" in to the new Havant Thicket reservoir when it is known by all sides that not all contaminants can be removed?</p> <p>Southern Water are proposing that they alone should effectively be judge and jury on the monitoring and control of any water pumped from [REDACTED] to the reservoir. Southern Water, as with all water companies, have a history of human, technical and system failures in their management of our most basic human need - water.</p> <p>Any contamination from the allegedly treated water, and it will happen sooner or later, will be a disaster for the Havant Thicket reservoir as it cannot be reversed or washed away. This will render it completely unusable for it's intended use of supplementing the future water supply for human use.</p> <p>The environmental impact of the new proposed Effluent Recycling Plant (ERP), associated pipework and pumping stations to Havant Thicket and even further afield to [REDACTED] appear to be of little or no concern to Southern Water when alternative sites for an ERP have been identified but dismissed. Even if an ERP was considered the viable option for the future, a fact which we do not accept, Southern Water's own Preliminary Environmental Information Report states that by locating it at the coast there will be a significant impact from the discharge from the new plant into the Solent via the long-sea outfall.</p> <p>WE can only conclude that Southern Water's primary driver for advocating such a costly, disruptive and dubious scheme is because they are permitted to make profits from such capital expenditure. They have no intention in addressing the issue of a future failing water supply by reducing leaks from their current pipes and infrastructure or indeed implementing much cheaper</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent. We consulted on our draft WRMP 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>Regarding the project itself, HWTWRP is classified by the Planning Inspectorate as a Nationally Significant Infrastructure Project (NSIP), and as such, we are required to seek consent from the Secretary of State in the form of a Development Consent Order (DCO). We expect to submit a DCO application to the Planning Inspectorate in 2025. The DCO process puts an emphasis on consultation and early engagement with stakeholders and communities. In this regard, we have carried out three separate consultations on this scheme, the first in 2022, the second in 2024 and the most recent in April 2025. In terms of local engagement for our consultations, in 2022 we ran a six-week non-statutory consultation (eight weeks in 2024), sending out almost 30,000 letters to those in the primary consultation zone around the Project. We placed half-page colour adverts over three weeks in the Southern Daily Echo, Hampshire Chronicle and The News (Portsmouth), and ran a social media outreach programme that ran throughout the six weeks of the Consultation. We sent posters to parish councils, and other social hubs like churches, community centres and libraries. We also launched a dedicated website which hosted a virtual room. The virtual room afforded the public with the opportunity to view consultation materials without needing to attend an in-person event. We hosted six in person events in proximity to the pipeline corridors and three online sessions across three consecutive weeks at different times to accommodate for different groups. Reference copies of the consultation materials were also located at 9 different deposit points including libraries and community hubs. We made sure to accommodate those who did and did not have access to either the internet or appropriate viewing technology. Further information about these consultations, and the project documentation and updates, are available on the dedicated project website; <a href="https://www.hampshirewtwrp.co.uk/">https://www.hampshirewtwrp.co.uk/</a></p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>storage options such as aquifers or traditional reservoirs as this does not suit their financial bottom line for directors and shareholders.</p> <p>Finally the biggest issue about the whole proposal is a singular failure to recognise the general public perception of its suitability. Southern Water is there to provide a service to their customers and people simply do not want to be asked to drink or use water which has come from a sewage recycling plant. This will lead to a blight on the future housing market when many prospective buyers will be reluctant to move with their families to a large part of Southern England where the tap water emanated from such a dubious source.</p> <p>There are many more arguments which could be made on technical, financial and environmental grounds and no doubt will have been raised by people more able than ourselves. As ordinary residents and customers we can only state in the strongest possible terms that this proposal is wrong for ourselves, our families and future generations.</p> | <p>We acknowledge concerns raised about the need for HWTWRP and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Regarding the quality of recycled water, the advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced. All of the hormones tested in SWS trials (testosterone, progesterone, estradiol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges. In addition, it is the role of the Drinking Water Inspectorate (DWI) to check that water companies in England and Wales supply safe drinking water that is acceptable to consumers and meets the standards set down in law. This includes independently checking the water quality tests carried out by water companies and auditing water company laboratories.</p> <p>A further consultation on water quality for HWTWRP was held in March 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. Documentation in relation to this consultation can be found here; <a href="https://www.hampshirewtwrp.co.uk/consultation.html">https://www.hampshirewtwrp.co.uk/consultation.html</a> including the Environmental Water Quality Report.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in</p> |

|           |          | <p>Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2. With regard to the site chosen for the recycling plant, this site was selected from the feasible options identified as a result of its suitability and proximity to the source of water to be recycled.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as aquifer storage. As outlined above, reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These additional options will help, but cannot resolve the deficit alone. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>Regarding profits, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum</p> |

| WRMP913   | <p>Please direct your attention to the concerns (of all residents) in the Hampshire area. Sending treated water into the fresh water reservoir is not acceptable, no resident wants to pay for this water (!) and the fact that the public complaints through the planning process can be discarded is outrageous.</p> <p>Would you want to drink from that tap? Southern Water is throwing raw sewerage into the sea on almost a daily basis because "they can". Trusting them to get this right? Not until they sort the sewage mess out first. Then prove how safe this process will be, with evidential testing made public, for the public decision.</p> <p>I am not happy to drink from such a tap.</p>                                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The water at customers' taps will continue to meet strict drinking water quality standards. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. Further information on water recycling safety and standards is available on the DWI website <a href="https://www.dwi.gov.uk/water-recycling/">https://www.dwi.gov.uk/water-recycling/</a></p> |
| WRMP914   | <p>I am writing to you as a resident of Rowlands Castle with concerns on the plans in the revised draft of the recycling proposal of effluent.</p> <p>Very little information has been circulated by southern Water to help me understand the plans for effluent recycling. I understand that the Local Planning Authority agreed on the construction of the Havant Thicket Reservoir was conditional on raw water being sourced from chalk fed freshwater springs.</p> <p>Reverse Osmosis has not been used before in the UK and there needs to be independent monitoring of the discharge into the reservoir.</p> <p>Apart from the huge costs involved, there is a lack of trust in the quality of the water from our taps for drinking water.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report, and there is a dedicated website containing detailed information on the Hampshire Water Transfer and Water Recycling Project (HWTWRP), where you can subscribe to updates; <a href="https://www.hampshirewtwrp.co.uk/">https://www.hampshirewtwrp.co.uk/</a></p> <p>Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced. Regarding the operation of the site, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to nitrate reduction processes at Portsmouth Harbour WTW.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>The impact on the harbour wildlife and recreation is of concern and the idea that we can tank water from Norway in a drought seems incredible and at a huge cost</p> <p>I am asking DEFRA to reject this plan and use this opportunity to ensure that the environment is put before profit and give time to develop sustainable solutions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by HWTWRP. We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>The water recycling proposals are not expected to impact the proposed recreational use of the reservoir. A further consultation on water quality was held in March 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. The Environmental Water Quality Report in summary, shows that changes in water quality in Langstone Harbour would be small and are not expected to have any impact on biodiversity. The report also confirms that reject water from the water recycling process, which will be released into the Solent, is unlikely to affect water quality or the biodiversity of the Solent. The full report is available to download here <a href="https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf">https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf</a></p> <p>Sea tankering from Norway is no longer included in our plan.</p> |
| WRMP915   | <p>I am deeply concerned about Southern Water's WRMP and in particular about Southern Water's proposal to recycle effluent water from [REDACTED] WWTW to the Havant Thicket Reservoir.</p> <p>There are many cheaper and better measure that SW need to focus on urgently now, instead of pushing these into the future I feel they have not produced a sound robust plan for our water provision.</p> <ol style="list-style-type: none"> <li>1. Leakage. Southern Water (SW)are not planning to do enough to replace water mains and reduce leakage. This is a terrible waste of treated water just running into the ground. Their suggested programme on mains renewal is far too slow.</li> <li>2. Demand reduction. SW are not planning to do enough on water efficiency to reduce demand. This is an inexpensive solution and should be high priority.</li> <li>3. More sustainable alternatives. SW have not looked enough at greener are sustainable ways of water capture and storage.We have plenty of rainfall and are not a dry artid place. Currently in regions where effluent recycling is use, such as Singapore, Australia and Calafornia rain is scarce.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p><b>1) Leakage</b></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We are aiming to reduce PCC to 110l/h/d under dry year conditions by 2045. This is 5 years ahead of the 2050 target date set by the Government.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a> It is</p>                                                                                                                                                                  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>4. Poor poulation data. The population figures are inflated. Many Local Plans on which data is basd were prepared many years ago and are out of date.</p> <p>5. TRUST. Consumers do not TRUST Southern Water. The company have have an appalling track record of polluting our rivers and harbours and have not been honest and open. They also have a terrible reputation regarding customer care at times of outages.Residets are furious.</p> <p>6. Hampshire Water Transfer and Water Recycling Project is not a sustainable solution and should be rejected. Reasons listed below:</p> <p>A. Poor public engagement. No public consultation at the FORMATIVE stage when the desalination proposal at [REDACTED] was dropped and recycling effluent from [REDACTED] [REDACTED] became the favoured proposal.</p> <p>There was little attention paid to speaking face to face with residents particularly in the four Leigh Park Wards nearest to the reservoir site. (all have a high indecies of deprivation) These are more difficult to reach and more work should have been done to engage with them. Water bills would have been a good way of dissemination information but was not used. A lot of information was restricted and difficult to access.</p> <p>The 2024 consultation I believe to be FLAWED as it was not carried out at FORMATIVE (Gunner principals)stage. The company's Statement of Community Consultation 2024 sets out the process. At the same times as the Consultation was running SW associate Portsmouth Water had registered a planning application for a dual pipeline to the reservoir. This would only be needed for effluent recycling.</p> <p>This is evidence that the 2024 consultation was not held at a FORMATIVE stage. It was held at an advanced stage when the type of dual pipeline which would only be required for water recycling was already designed, registered by the Local Planning Authority and out for public comment.</p> <p>The spring fed reservoir only requires ONE pipeline and that already has planning consent.</p> <p>B. The proposal to build the Water Treatment Works to treat the effluent water from [REDACTED] WWTW at Brockhampton West in Bedhamoton is SHOCKING. This is a toxic former landfill site on the coast which already pollutes Langstone Harbour. Constructing the treatment works on this site is probably the worst place in the whole Borough. Pipes will have to run down through the landfill and also under the Hermitage Stream nearby. There is already big probles with coastal erosion. All this would be commissioned by SW. This is the same company who have polluted the harbour for years on end pretty much unchecked and finally were fined £90 million for polluton event and described as criminal by the Judge in his summing up.</p> <p>C. The effluent recycling project would have a vast carbon footprint. Huge amounts of concrete and other materials and HGV movements would take place during construction.</p> <p>D. Intensive energy use, particularly to pump water around the areas. Only a fraction of this energy could be sustainably generated locally.</p> | <p>too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> <p><b>2) Demand reduction</b></p> <p>We will continuously monitor the effectiveness of our demand management initiatives and closely follow developments in this area across the UK water sector. If needed, we will modify our approach and adopt new technology to achieve greater demand savings and/or to achieve them earlier. Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p><b>3) More sustainable alternatives</b></p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>With regards to consideration of capture and storage options, A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Reservoirs are another storage option: they require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p><b>4) Population data</b></p> |

|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>E. Damage to the environment. No environmental net gain. The original spring fed reservoir would have helped reduce nitrates in Langstone Harbour. The spring water has a high nitrate level and currently flows into the Langstone Harbour. Pumping the spring water to Havant Thicket Reservoir would have brought about the benefit of nitrate reduction. There will be a disbenefit if the effluent recycling was agreed as less spring water would go the reservoir.</p> <p>F. In those countries where effluent recycling is used very little flows to domestic taps. For example in Singapore 55 per cent of water is recycled water(newwater) but only 5 percent flows taps. Most people on the island drink bottled water. The water is used in agricultural and industry. They have the highest percentage consumption of bottled warer in the world.</p> <p>G.Currently the majority of people in England drink tap warer. It's unknown what percentage would turn to bottled water.SW have no produced any data on this. Increased use of bottled has an environmental impact but SW have not assessed that either.</p> | <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs. Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p><b>5) Public trust</b></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="#">Our Business Turnaround Plan   Southern Water</a></p> <p><b>6) Hampshire Water Transfer and Water Recycling Project</b></p> <p><b>A. Public engagement</b></p> <p>We have fulfilled all regulatory and legal requirements regarding the public consultation, , but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations.</p> |

|           |          | <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers, contacted MPs, stakeholders and previous responders directly, and publicised the consultation in our newsletter which went out to all of our customers.</p> <p>Thank you for raising your concerns about whether the rdWRMP24 consultation aligns with the Gunning Principles in being truly formative. The purpose of this consultation has been to gather stakeholder input and that we expect changes to be made to the rdWRMP24. Whilst we appreciate the concerns, as a final decision on the rdWRMP24 had not been made or predetermined at the time of the consultation, we do not agree that it is contrary to the Gunning Principles.</p> <p><b>B. Former Landfill site</b><br/> Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p><b>C. Carbon footprint</b><br/>See (3) above.</p> <p><b>D. Intensive energy use</b><br/>See (3) above.</p> <p><b>E. Environmental impacts</b><br/>See (3) above. The scheme will reduce abstraction pressure on the environment and the resulting impacts.</p> <p><b>F. In those countries where effluent recycling is used very little flows to domestic taps</b><br/>No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir.</p> <p><b>G. Currently the majority of people in England drink tap water</b><br/>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir.</p> |
| WRMP916   | <p>I am writing to you as a Southern Water customer. I live in Horndean very near to the new reservoir so myself and my family will be impacted by future decisions concerning the Effluent Recycling Scheme.</p> <p>I have major concerns about the environmental impact, the cost and trust in the water company as their track record has been very poor.</p> <p>My main concerns are that other options have not been explored thoroughly. I believe that rain water storage using aquifers and more reservoirs could be a cheaper more sustainable option with less environmental impact. If the 19 % of water wasted due to leaks could be improved this would save water. This would be a far more sustainable option than tankering water from Norway.</p> <p>Digging 40 km of pipework to transfer the recycled effluent will have a huge environmental impact and running costs in the region of £3 million each year (which the customers will have to pay). The energy needed, not just in times of drought, will be unacceptable.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. We consider cost and environmental impact alongside other factors such as volume of water that an option can provide, its resilience to climate change etc. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan: <a href="#">Our Business Turnaround Plan   Southern Water</a></p> <p>With regards to your suggestion of other storage and rainfall capture options: A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South</p>                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>The shafts which will need to be dug into Broadmarsh landfill could cause contaminated pollution to leak into Langstone Harbour. The water which will be discharged into the Solent will also affect the water quality and therefore our marine mammals. The plan shows no independent monitoring of the discharge from the recycling plant and I and many others don't feel S.W. can be trusted.</p> <p>Finally the environmental impact of increase in plastic bottles used for bottled water by people who want to be confident that the water they are drinking is safe will increase.</p> <p>I feel that customers have not been given enough information on these plans nor have people been given enough time for consultation on these plans.</p> | <p>Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. A further consultation on water quality for HWTWTP will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding your concern about the laying of pipework: The majority of the pipelines will be installed using trenches across farmland. In other locations, such as populated areas or where there are particularly sensitive environmental constraints, trenchless techniques will be used. Installation of the pipelines would be controlled by various management plans, including a Construction Environmental Management Plan. Water recycling inevitably uses more energy and is subsequently more expensive to run, than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>With regards to your comment about our consultation, we have fulfilled all regulatory requirements in this respect. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. We have received 1,176 responses as part of rdWRMP24 consultation. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> |
| WRMP917   | <p>I strongly object to Southern Water's application for refuse recycling at the Havant reservoir due to the environmental and economic flaws in their revised plan. Southern Water continues to promote expensive, energy-intensive effluent recycling while dismissing more sustainable alternatives. Their plan includes tankering water from Norway—a previously rejected, environmentally unsound idea that risks introducing non-native species and comes with significant costs. Instead, SW should prioritise solutions that align with climate change adaptation, such as collecting and storing more winter rainfall in reservoirs and aquifers.</p> <p>My main points of objection are as follows:</p> <p>Southern Water has a history of poor water management. It loses 100 million liters daily to leaks, wasting 19% of their treated water. Even by 2050, they aim to reduce leakage by only 53%—far less ambitious than the achievable 70% reduction experts suggest. They should be held to account and spending money on a solution to this waste.</p> <p>Locating the recycling plant on a landfill site near Langstone Harbour threatens contamination through leachate. The high-energy recycling process will pump treated water over long distances, further increasing carbon emissions.</p> <p>Southern Water's refusal to invest in network connectivity and reservoirs undermines long-term resilience. Instead, their plan prioritises profit-driven recycling schemes that burden customers and the environment.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Water Resource Planning Guideline requires WRMP24 to be a Best Value Plan i.e. a plan that aims to deliver wider benefits to society and the environment, by taking account of a wide range of factors, alongside economic cost, in identifying the preferred water resource programme.</p> <p>Regarding sea tankering, this option is no longer included in our plan.</p> <p>With regards to your suggestion of other storage and rainfall capture options: A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a</p>                                                                                                                                                                                                                 |

|           | <p>I urge DEFRA to reject Southern Water's flawed plan and demand a sustainable approach that focuses on reducing leaks, improving demand management, and developing infrastructure to store winter water for summer use. This approach would better protect our environment and ensure long-term water security.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan: <a href="#">Our Business Turnaround Plan   Southern Water</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Ofwat regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> |
| WRMP918   | <p>I am writing to express my strong objection to Southern Water's (SW) revised draft Water Resources Management Plan 2024. This is a once-in-a-generation opportunity to prioritize sustainable and environmentally sound solutions to address water scarcity, yet SW's current proposals fall woefully short of this imperative.</p> <p>Key Concerns with the Revised Plan<br/>Effluent Recycling Schemes:</p> <p>Southern Water's persistent push for energy- and chemical-intensive effluent recycling as a key strategy is deeply concerning. Placing the recycling plant on a former landfill site at Broadmarsh (Havant) risks contaminating Langstone Harbour due to piling and tunneling operations. The plan involves pumping treated effluent 40 kilometers to [REDACTED] at an astronomical and escalating cost of £1.2 billion, while failing to adequately explore sustainable alternatives such as improved rainfall collection and aquifer storage.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Water Resource Planning Guideline requires WRMP24 to be a Best Value Plan i.e. a plan that aims to deliver wider benefits to society and the environment, by taking account of a wide range of factors, alongside economic cost, in identifying the preferred water resource programme.</p> <p>Regarding you concerns about the environmental impacts, such as the risk from invasive non-native species (INNS) of the sea tankering from Norway option we confirm that this option is no longer included in our plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           | <p>Water Tankering from Norway:</p> <p>The proposal to tanker water from Norway during droughts is environmentally and economically unsound. It risks introducing non-native species, contradicts Southern Water's earlier assessment of this option as unviable, and represents a clear disregard for sustainable water management practices.</p> <p>Failure to Address Leakage:</p> <p>Southern Water's inefficiency in addressing leakage is alarming. Losing 100 million liters of water daily (19% of all water abstracted) is unacceptable, particularly when customers pay for this waste.</p> <p>The plan's modest target of reducing leakage by only 53% by 2050 is insufficient. Expert analysis suggests a more ambitious target of a 70% reduction is achievable with proper investment and prioritization.</p> <p>Lack of Network Integration:</p> <p>In West Sussex, Southern Water has failed to connect its water network, resulting in unnecessary dismissal of viable options simply because water cannot be transported to areas in need. This shortsightedness prioritizes effluent recycling schemes over developing an integrated and robust water network.</p> <p>Missed Opportunity for Sustainable Solutions:</p> <p>The UK collects only 1% of rainfall. Instead of relying on unsustainable, high-carbon methods, Southern Water should prioritize solutions that align with climate adaptation:</p> <ul style="list-style-type: none"> <li>Building new reservoirs to store excess winter rainfall for use in drier summers.</li> <li>Moving abstraction points closer to the sea to preserve freshwater in chalk streams.</li> <li>Maximizing aquifer storage capacity to work with, rather than against, natural hydrological cycles.</li> </ul> <p>Why DEFRA Must Reject this Plan</p> <p>If this plan is approved, Southern Water will gain de facto approval to pursue unsustainable and high-cost effluent recycling schemes, at great expense to the environment and its customers. The potential amalgamation of Portsmouth Water with Southern Water further raises concerns about cost-sharing, potentially burdening Portsmouth Water customers with inflated bills.</p> <p>The revised draft plan demonstrates a clear prioritization of corporate profit over the environment, public interest, and long-term sustainability. This is unacceptable and must not be allowed to proceed.</p> <p>Call to Action</p> <p>I urge DEFRA to reject Southern Water's revised draft Water Resources Management Plan and require the development of a truly sustainable, forward-thinking strategy. Specifically, DEFRA should mandate:</p> <p>A significant reduction in water leakage with a minimum target of 70% by 2050.</p> | <p>programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>With regards to your suggestion of other storage and rainfall capture options: A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |

## Water Resources Management Plan 2024 Statement of Response

### Annex 3: Our responses to feedback from the general public

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>Investment in sustainable water storage solutions, such as reservoirs and aquifer storage, to manage the predicted seasonal variability in rainfall.</p> <p>Comprehensive network integration to enable equitable water distribution across Southern Water's service area.</p> <p>This is a critical moment to ensure water resource management aligns with climate resilience and environmental stewardship. Southern Water must be held accountable to deliver a plan that prioritizes these principles.</p> <p>Thank you for considering my objections. I trust DEFRA will take the necessary steps to ensure Southern Water develops a sustainable and responsible water management strategy that benefits both the environment and its customers.</p> <p>When I was at school many years ago I was taught that there was a vast untapped resource of an artesian basin that stretched for thousands of square miles under Hampshire, the Channel, Dorset Devon etc. Has this resource been fully utilised?Are</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP919   | <p>I am writing to object to Southern Waters Draft plan which is appalling.</p> <p>Tinkering in water from Norway is a crazy in efficient and unethical idea.</p> <p>The water shortages are as a result of leaky pipes with 19% of water we pay to treat lost! SW should be reinvesting those huge profits into repairing the existing pipe network, not charging us more to make more profit, or claim they need to make repairs.</p> <p>You need to ensure these water companies are held accountable!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Water Resource Planning Guideline requires WRMP24 to be a Best Value Plan i.e. a plan that aims to deliver wider benefits to society and the environment, by taking account of a wide range of factors, alongside economic cost, in identifying the preferred water resource programme.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a> It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> |
| WRMP920   | I find the latest Water Resources Management Plan from Southern Water deeply disturbing:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>a) because the primary aim still appears to be maximising profit for shareholders - regardless of the cost to bill payers and the environment;</p> <p>b) if permitted, I believe that the latest proposed effluent recycling and transfer scheme could set a bad precedent - driving further similarly bad proposals across the country.</p> <p>I therefore strongly urge DEFRA to REJECT Southern Water's proposed plan. It appears to be based on poor assumptions regarding future needs. It is unnecessarily expensive (the latest construction estimate is £1.2 to £1.4 BILLION, and spiralling). It is unnecessarily inefficient (the latest energy estimate just to treat &amp; pump the water will cost at least £3 million per year). It is carbon intensive and therefore unsustainable. It is a high risk to the environment and local people. It will not benefit local people. It is not expected to be in operation before 2035 and therefore won't help to satisfy existing or short-term needs. Once opened it has a useful life of only 60 years - so no legacy benefit. Southern Water have so far ignored or mysteriously rejected much simpler, efficient, cheaper, tried and tested solutions.</p> <p>In addition to rejecting the latest proposal, I believe DEFRA should also somehow force - or at least incentivise - Southern Water to:</p> <ul style="list-style-type: none"> <li>stop wasting time and bill payer's money with so many poor proposals;</li> <li>properly explore and develop sustainable solutions which exploit our wetter winters by storing excess water in existing confined aquifers;</li> <li>build more winter storage reservoirs (apparently they could build 3 for the same estimated costs of this proposal!);</li> <li>move river abstractions to the tidal limit to reduce risks and improve the ecology of rivers;</li> <li>extract from springs along the coast;</li> <li>speed up mains maintenance and renewal programmes in order to reduce waste;</li> <li>consider purchasing under-utilised private supply licences.</li> </ul> <p>Time is of the essence. Climate change is happening NOW! The UK is classified as one of the world's most nature-depleted countries! Damaged ecosystems exacerbate climate change, undermine food security, and put communities at risk. Further climate mitigation delays by companies such as Southern Water could be catastrophic. We simply cannot afford to let Southern Water continue wasting time and money developing inappropriate schemes such as this. It is more important than ever before for authorities like DEFRA to listen to and act in the best interests of the public by helping to improve transparency (and trust), and also taking measures to minimise the misinformation, disinformation, corruption and delays of the corporate elite - who are currently destroying our environment and people lives.</p> | <p>Regarding cost and profit, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017.</p> <p>We acknowledge concerns raised about the need for the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reductions in the amount of water we can take from the Test and Itchen rivers, we need to find sustainable alternatives. In addition, the length of pipeline adds to energy use, but is essential to move water around the network between existing treatment and supply infrastructure. To address the potential environmental impacts, including increased energy usage, of HWTWRP, we are undertaking a range of environmental assessments as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtrp.co.uk">https://www.hampshirewtrp.co.uk</a>.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the</p> |

|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                                                                                                                                                                                                         | <p>greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. A Chalk Managed Aquifer Recharge (MAR) feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>The company Water Resource Zones do not always extend to the coast as might be expected (e.g. especially in Hampshire), as the resource zones are distinct and separate from the physical infrastructure of the Water Supply Zones. Additionally, many coastal springs are often relatively small from a public supply perspective, and such spring discharges typically show a strong seasonality and decline significantly in summer periods. Or abstractions at these locations can be more prone to saline intrusion. So coastal springs general tend to offer poorer drought resilience and security of supply. Similarly, associated coastal wetland environments dependant on such smaller springs will also be drought sensitive. However, such options (or those available within our water resource zones) will continue to be reviewed and reconsidered in future water plans.</p> <p>Regarding the use of under-utilised private supplies, this is an option we are reviewing as part of the next Water Resources Management Plan.</p> |
| WRMP921   | <p>I wish to state my objections to Southern Water's revised plan.</p> <p>My principal grounds for objection are that the plan is unnecessary and exorbitantly costly. Also, it poses serious risks of environmental damage; there is also a range of safety problems which potentially jeopardise people's health.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>The plan to 'recycle effluent' to top up the reservoir is unnecessary because there are alternatives which would be less costly, less potentially hazardous and quicker to implement. Each of these alternatives would contribute to solving the problem that Southern Water seeks to address, i.e. maintenance of a reliable supply of water without detriment to the fragile ecology of the Test-Itchen chalk streams. Thus, a concerted programme of investment to reduce leaks in the supply network would help. Relocating the plant which currently extracts water from the chalk streams would minimise the problem of damaging the streams' freshwater ecology; for example, by relocating downstream to a point just above the tidal reach. Currently there is inadequate collection of rainwater, only a trivial percentage of which is collected for storage. The building and development of the infrastructure to realise Southern Water's plan (including three new pumping stations, more than 40 miles of pipeline, and the development of new plant to process the effluent) would be ludicrously expensive: current estimates are £1.3 billion, with costs said to be rising all the time ! Unspecified amounts of this vast sum would presumably have to be borrowed: yet Southern Water's financial status has just been downgraded, which will result in higher costs of borrowing. This will become an increasing burden on the customers. In addition, this development of the infrastructure would be 'carbon heavy', compromising the commitment of Southern Water to reduce its carbon emissions by 2030.</p> <p>I am deeply concerned about a range of environmental risks associated with the whole project: the Broadmarsh site (designated location of the 'treatment' plant) has historically been a 'dump' for industrial waste, contaminants from which could leak into the water; the ground is likely to be unstable, as it has been the site of a landfill tip: this potential instability could compromise the integrity of the infrastructure. As far as I am aware, there has been no application of the planned processes on this scale in this country before, which raises questions about its safety. If contaminated water accidentally reaches the reservoir, the water stored there would be irreversibly polluted, with grave risks to public health and to the natural environment. Finally, I have no confidence that Southern Water would (a) maintain the level of investment required to keep the systems running safely and (b) report truthfully on any 'issues' that might arise. Just look at how they behave now, illegally dumping raw sewage and covering up their misdeeds !</p> <p>Please reject their proposals.</p> | <p>projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as HWTWRP. Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. Leakage reduction will help, but alone it cannot resolve the deficit. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Concerning the carbon impact of large infrastructure schemes, as WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>With regard to the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by HWTWRP. We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p>                                                                                                                                                                                                                                                                                                      |
| WRMP922   | <p>Fundamentally Southern Water's plan must be rejected. On so many counts it is wholly unacceptable.</p> <p>I share with you a number of reasons for rejecting this plan. To be frank there are many reasons and I know you will receive many letters and emails exposing Southern Water's plan as being wholly unacceptable.</p> <p>1 -Southern Water's plan commits us to paying for recycled effluent as the primary source of our drinking water every day of the year, year on year. Aside of the many reasons I shall draw to your attention later we shall all be committed to paying vast sums for a service that extracts water from effluent which includes raw sewage and water run-off into the recycling plant. There is no alternative or second option on offer.</p> <p>2-There is no plan to abstract water from lower down the catchment area, there is no plan to capture fresh rainwater. Climate change predictions show that we are likely to encounter wetter winters. Quantity of rainfall predictions indicates sufficient rainfall to supply all our water needs if it were collected. No such plan exists to create more reservoir catchments.</p> <p>3 – The Candover Drought Option should not be permitted to continue beyond 2030. The [REDACTED] river abstraction should be moved to nearer the tidal zone. Climate predictions indicate drier summers. Our rivers need a flow to sustain biodiversity and protect wildlife.</p> <p>4 – it is incredulous that Southern Water would tanker in water from Norway should we have a drought. This shows a complete disregard, or perhaps deliberate intent, not to make use of our</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent.</p> <p>1. Following reductions in the amount of water we can take from Rivers Test and Itchen and their associated aquifers, we need to find at least 166 million litres of water a day to supply customers in Hampshire, that isn't from a river or aquifer. We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding sustainable water supplies into the future means we need to look at all viable alternatives to the sources that have been traditionally used. HWTWRP is being funded in the same way as all our costs, funding for new infrastructure and improvements on the water supply side of the business is averaged across water supply customers' bills across our region. As with all costs and charges to customers, funding for the Project will be subject to approval by our economic regulator, Ofwat. We anticipate that Ofwat would spread the cost of construction and operation over the life of the Project once built, to reduce the impact on bills in any one year. The Project is continuing to be developed. We currently estimate that the cost of the Project to each of our water supply customers would be approximately £2.50 a month over a 20-year period.</p> <p>2. We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------- |           | <p>own rainfall. Water inevitably contains organisms. Mixing water from one country with our own, opens up the possibility of bringing in unwanted 'guests' which could devastate our own wildlife. Further altering the pH of our water could have deleterious effects on our own wildlife.</p> <p>5 – Southern Water manipulate population figures and thus inflate water demand needs so they can dismiss using alternative schemes to provide fresh water for our needs on the grounds that these alternatives would be insufficient to meet demand. This way they wholly dismiss all plans to build more reservoirs to capture the plentiful supply of rainwater. They dismiss improvements to abstract river water from nearer the tidal zone when in wintertime there is plenty of water in the rivers and when abstraction would not threaten wildlife. They make a token gesture to improving infrastructure to markedly reduce water leaks. That they dismiss all these options leads one to consider that their plan is primarily a means to 'feather their own nest' from a financial point of view. Their plans are so energy intensive and, as previously stated, commit them to using the high energy method 365 days of every year and we shall pay the price.</p> <p>5 – It is of considerable concern that Southern Water would appear to be manipulating the Investment Model to prevent the selection of smaller more sustainable schemes until after 2030, in favour of continued use of drought permits on the Test and Itchen, and the selection of larger schemes which cannot be delivered until later, to make sure the Company get the solution they want selected, which delivers more guaranteed profits.</p> <p>6 – The scheme is incredibly energy intense. To pump treated effluent up to Havant Thicket Reservoir and then transfer the water over to [REDACTED] some 40+ kilometres away will require considerable energy. As such this method has a very high carbon impact and will result in release of considerable greenhouse gases. This process will occur every day of the year, year on year, regardless of the rain that falls during the winter, regardless of the huge volume of water that flows from our rivers to the sea.</p> <p>7 – Southern Water say they are committed to net zero by 2030 yet their scheme is probably one of the most energy demanding schemes that could be devised.</p> <p>8 – That Southern Water's plans to reduce water leakage are so poor is of grave concern. We pay for that lost water and they profit from that lost water! Their timescale to make improvements is wholly inadequate. Far too much water is leaked.</p> <p>9 - It goes beyond crass stupidity that Southern Water plan to build on the old landfill site on Broadmarsh. Given their atrocious record of water leaks and deliberate sewage releases I have absolutely no faith that they can build on the landfill site without there being a calamity, if not a catastrophe. The potential for leakage of obnoxious substances is just too high a price to pay.</p> <p>Anyone of the above points I draw to your attention should be sufficient to turn down Southern Water's plan. Collectively these points, and you will receive many others, conclusively shows that Southern Water's plan is absolutely and wholly unacceptable. It is a plan that ensures a high cash flow, daily return for Southern Water's stakeholders at our expense. Further, should it</p> | <p>relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable as a result of the reduction in abstraction licences on the whole river and groundwater system and potential impact on migratory fish. New reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan. A Chalk Managed Aquifer Recharge (MAR) feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>3. It is our desire to avoid use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for HWTWRP, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>4. Sea tankering has been removed from fdWRMP24.</p> <p>5. For dWRMP24 we, together with the other Water Resources South East (WRSE) companies, commissioned Edge Analytics to provide population growth forecasts, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning</p> |

|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | be accepted by yourselves, it sets a very dangerous precedent for future schemes. You have amongst other sound reasons for refusal such as scientific and financial, a moral obligation to refuse this plan. | <p>approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>5. The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>The amount of water we can abstract from river and groundwater sources are determined by our abstraction licences. The licences typically specify the maximum amount of water we can take from a source over a year with a limit set on maximum daily abstraction. We cannot take unlimited amounts of water from these sources during wet periods. The availability of excess water does not mean that we can exceed the volumes permitted in our abstraction licences. The treatment capacity of our sources typically corresponds to the licence or the demand in the area supplied by the source.</p> <p>6. Regarding the carbon impact of water recycling, following reductions in abstraction licences as outlined above, in some areas we need to look for alternative sources of supply. This will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>7. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>8. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>9. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> |
| WRMP923   | <p>As a resident of Rowlands Castle - Please see below objections:</p> <p>Further to Southern Water's (SW) last draft Water Resources Management Plan in 2023, which included [REDACTED] effluent recycling via Havant Thicket Reservoir, being rejected, it would appear that they have now just recycled the same old leaky Plan, with more effluent recycling, but this time they are also proposing to tanker water all the way from Norway to Southampton in a drought to plug the gap in their plan to 2035! Even SW previously rejected tankering from Norway as a stupid idea (very expensive and environmentally unsound, with the risk of importing non-native species), but rather than look at more sustainable options that might undermine their case for recycling effluent they have effectively recycled their old Plan giving lots of reasons why the better options cannot be developed quickly enough and the effluent recycling scheme still remains their best option.</p> <p>FACTS:</p> <p>* In the UK we only collect 1% of rainfall. We need a better plan that works with climate change to collect more water in the predicted wetter winters and to store it for use in drier summers, using underground confined aquifers and by building new reservoirs. Instead, SW proposes energy and chemical hungry effluent recycling from which it and its owners will be able to profit very considerably over many years from both construction and operation. The recycling plant will be located on an old landfill site on the coast at Broadmarsh (Havant), with</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>We acknowledge concerns raised about the need for the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment.</p> <p>Regarding the carbon impact of water recycling, following reductions in abstraction licences as outlined above, we need to look for alternative sources of supply. This will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline</p>                                                                                        |

|           | <p>piling and tunnelling putting Langstone Harbour at risk from leachate and the recycled water will be pumped up to Havant Thicket Reservoir and then 40kms to [REDACTED]. The current building costs are £1.2billion and spiralling. We need a radical rethink on where and how the company takes water from the environment, for example moving its abstraction points closer to the sea to leave freshwater in our precious chalk streams for longer.</p> <p>* It is shocking that SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet SW's slow programme for improvements means even by 2050 SW will still be leaking about 10% of all the water it treats, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious leakage and mains replacement programme SW will never get leakage under control.</p> <p>* An industry leakage expert tells us if SW put the funding and priority in, SW should be striving to achieve a 70 % reduction in leakage by 2050 (not the 53% target in its plan).</p> <p>* In West Sussex, SW has not taken action to connect up its network and as a result SW is dismissing options because it can't get the water to where it is needed. Why is SW not connecting up the network? It is because they want to get the recycling schemes underway first.</p> <p>If the Plan goes through, the use of very expensive effluent recycling schemes will effectively have been approved and SW will be able to carry on and build these schemes at great cost to its customers and the environment.</p> <p>All unacceptable.</p> | <p>emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>Regarding storage, our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. A Chalk Managed Aquifer Recharge (MAR) feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>We have also considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Regarding the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

| WRMP924   | <p>I wish to object to the Southern Water Revised Water Resources Management Plan.</p> <p>Key Concerns:</p> <p>1. Effluent Recycling Risks: SW's plan relies heavily on energy-intensive effluent recycling. The proposed plant at Broadmarsh (Havant) would be built on an old landfill site, risking contamination of Langstone Harbour through leachate during construction.</p> <p>This recycled water would be pumped to Havant Thicket Reservoir and then transported 40 km to [REDACTED] with an estimated cost already at £1.2 billion and rising.</p> <p>2. Leakage Mismanagement: SW loses 100 million liters of treated water daily through leaks—19% of their supply. Even by 2050, they plan to waste 10%. Leakage experts say a 70% reduction by 2050 is achievable, but SW's target is only 53%.</p> | <p>The options requirement for network enhancements in the Central area (which includes West Sussex) were not taken forward as the required enhancements could not be delivered by 2030. These will be reconsidered for WRMP29.</p> <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1. We acknowledge concerns raised about the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reductions in the amount of water we can take from the Test and Itchen rivers, we need to find sustainable alternatives. In addition, the length of pipeline adds to energy use, but is essential to move water around the network between existing treatment and supply infrastructure. To address the potential environmental impacts of HWTWRP, including increased energy usage, we are undertaking a range of environmental assessments as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a>.</p> <p>Regarding the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |

|           | <p>3. Absurd Alternatives: SW's proposal to tanker water from Norway—an idea they previously dismissed as expensive, environmentally unsound, and risky for importing invasive species—shows their desperation to defend unsustainable recycling schemes.</p> <p>4. Sustainable Options Ignored: SW dismisses sustainable solutions like expanding reservoirs, using aquifer storage, or improving the network to move water efficiently, claiming these aren't feasible within their timeline.</p> <p>5. Potential Price Hikes: If Portsmouth Water merges with SW, all customers may face significant bill increases to fund these costly projects.</p> | <p>2. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>3. Sea tankering has now been removed from fdWRMP24</p> <p>4. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. A Chalk Managed Aquifer Recharge (MAR) feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>5. Southern Water and Portsmouth Water are entirely separate and independent companies but have commercial arrangements to transfer water across their respective boundaries. Portsmouth Water is a 'Water Only Company' meaning that within its area, it provides only potable water services. Southern Water provides wastewater services in the area Portsmouth Water supplies for water. Southern Water is not discussing changes to the current licence to operate arrangements and company mergers are not considered to be part of this consultation process. HWTWRP is being funded by Southern Water. Like all our costs, funding for new infrastructure and improvements on the water supply side of the business is averaged across our own water supply customers' bills across our region. As with all our costs and charges to customers, funding for HWTWRP will be subject to approval by our economic regulator, Ofwat. We</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | anticipate that Ofwat would spread the cost of construction and operation over the life of the Project once built, to reduce the impact on bills in any one year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP925   | <p>Regarding the revised draft Water Resources Management Plan by Southern Water I am would like to make the following observations as I am vehemently opposed to this direction.</p> <p>Southern Water (SW) have not completed a full review of the plan considering all the alternatives</p> <p>SW are not responsible people to deal with our drinking water and if they were to fix their leaks there would be no need to recycle sewage water for drinking.</p> <p>With predicted changes in climate more should be made to capture the rainwater.</p> <p>SW should focus more on suitable options rather than recycle sewage for drinking.</p> <p>Taking water from Norway in Tankers is not a viable option</p> <p>SW leakage is 100 million litres per day (19%) of water and this should be brought under control.</p> <p>Reading all the information the Hampshire effluent recycling scheme does not represent the best value for customers.</p> <p>Details of the water quality on the new reservoir are not available and the scheme should not move forward until the environmental risks/impacts are known</p> <p>Moving the [REDACTED] abstraction to the tidal limit would be a better and more sustainable solution to protect the whole of the freshwater catchment and restore natural flows in a drought. Moving river abstraction to the tidal limits can have environmental benefits.</p> <p>More targets should be set for delivery of groundwater boreholes schemes as they require minimum infrastructure and DEFRA should challenge this.</p> <p>The West Sussex network should be upgraded. Upgrades are already taking place in Hampshire.</p> <p>SW seem to be putting all their eggs in one basket surely it is better to implement smaller schemes where water is needed many of which do not require new consents - just treatment plants and boreholes.</p> <p>More effort should be put into working with non domestic usage to reduce their use of drinking water for non potable uses</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as the Hampshire Water Transfer and Water Resources Project (HWTWRP). Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. Leakage reduction will help, but alone it cannot resolve the deficit. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>HWTWRP is being funded in the same way as all our costs; funding for new infrastructure and improvements on the water supply side of the business is averaged across water supply customers' bills across our region. As with all costs and charges to customers, funding for</p> |

|           | <p>Consumers in the areas affected DID NOT have the options to comment at the formative stage of the plan.</p> <p>I am sure that I am not in the minority as at a recent meeting the majority was of the same opinion as myself and I trust you will take all all the points into account for rejecting the SW proposals.</p> | <p>HWTWRP will be subject to approval by our economic regulator, Ofwat. We anticipate that Ofwat would spread the cost of construction and operation over the life of HWTWRP once built, to reduce the impact on bills in any one year. The Project is continuing to be developed. We currently estimate that its cost to each of our water supply customers would be approximately £2.50 a month over a 20-year period.</p> <p>HWTWRP held a consultation on water quality in March 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. The full report is available to download here <a href="https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf">https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf</a></p> <p>To address water quality and other potential environmental impacts, including increased energy usage, of HWTWRP, we are undertaking a range of environmental assessments as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a></p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Recycled water options are generally only considered in areas where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). HWTWRP is designed to provide water resources during droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>The options requirement for network enhancements in the Central area (which includes West Sussex) were not taken forward as the required enhancements could not be delivered by 2030. These will be reconsidered for WRMP29.</p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. We are working with developers to recycle as much water as possible on new developments at the site level.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information. We have received 1,176 responses as part of rdWRMP24 consultation and have met the visibility standards within the guidance. We do welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations.</p> |
| WRMP926   | <p>I have massive concerns about what Southern Water are doing - I live very close to this area, and I find it unacceptable that the plans have changed.</p> <p>The UK collects only 1% of rainfall, despite predictions of wetter winters. Instead of working with climate change by storing surplus winter water, Southern Water proposes energy-intensive, profit-driven schemes that harm the environment and burden customers for decades.</p> <p>The SW revised draft plan does not strive to work with predicted changes to our climate, which modelling has shown means we will get wetter winters and drier summers. We need a strategy that includes;</p> <p>Moving abstractions (river and boreholes) to the bottom of the catchments, Collecting more water in winter and storing it for use in dry summers. This would reduce environmental impacts and allow the extent to which abstraction reform is required to be reduced.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. We acknowledge concerns raised about the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>The main concerns I have are below</p> <p>1. Effluent Recycling Risks: SW's plan relies heavily on energy-intensive effluent recycling. The proposed plant at Broadmarsh (Havant) would be built on an old landfill site, risking contamination of Langstone Harbour through leachate during construction. This recycled water would be pumped to Havant Thicket Reservoir and then transported 40 km to [REDACTED] with an estimated cost already at £1.2 billion and rising.</p> <p>2. Leakage Mismanagement: SW loses 100 million liters of treated water daily through leaks—19% of their supply. Even by 2050, they plan to waste 10%. Leakage experts say a 70% reduction by 2050 is achievable, but SW's target is only 53%.</p> <p>3. Absurd Alternatives: SW's proposal to tanker water from Norway—an idea they previously dismissed as expensive, environmentally unsound, and risky for importing invasive species—shows their desperation to defend unsustainable recycling schemes.</p> <p>4. Sustainable Options Ignored: SW dismisses sustainable solutions like expanding reservoirs, using aquifer storage, or improving the network to move water efficiently, claiming these aren't feasible within their timeline.</p> <p>5. Potential Price Hikes: If Portsmouth Water merges with SW, all customers may face significant bill increases to fund these costly projects.</p> | <p>Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reductions in the amount of water we can take from the Test and Itchen rivers, we need to find sustainable alternatives. In addition, the length of pipeline adds to energy use, but is essential to move water around the network between existing treatment and supply infrastructure. To address the potential environmental impacts of HWTWRP, including increased energy usage, we are undertaking a range of environmental assessments as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a>.</p> <p>Regarding the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>2. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>3. Sea tankering has now been removed from fdWRMP24</p> <p>4. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. A Chalk Managed Aquifer Recharge (MAR)</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                       | <p>feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>5. Southern Water and Portsmouth Water are entirely separate and independent companies but have commercial arrangements to transfer water across their respective boundaries. Portsmouth Water is a 'Water Only Company' meaning that within its area, it provides only potable water services. Southern Water provides wastewater services in the area Portsmouth Water supplies for water. Southern Water is not discussing changes to the current licence to operate arrangements and company mergers are not considered to be part of this consultation process. HWTWRP is being funded by Southern Water. Like all our costs, funding for new infrastructure and improvements on the water supply side of the business is averaged across our own water supply customers' bills across our region. As with all our costs and charges to customers, funding for HWTWRP will be subject to approval by our economic regulator, Ofwat. We anticipate that Ofwat would spread the cost of construction and operation over the life of the Project once built, to reduce the impact on bills in any one year.</p> |
| WRMP927   | <p>Does Southern Water own Portsmouth Water and can they run roughshod over it?</p> <p>The new reservoir was always intended to be for fresh drinking water pumped out of the chalk. Now as I understand it Southern Water are proposing to grab it as a dumping ground for their effluent. Please stop this appalling proposal dead in its tracks</p> <p>Wishing to stay healthy</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Purified recycled water is water that has gone through a series of advanced treatment techniques before being pumped into a river, lake or reservoir – from where it can be taken and treated to strict drinking water standards before being sent into supply. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by the Hampshire Water Transfer and Water Recycling Project (HWTWRP). We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP928   | <p>I am writing to express my concern and reject Southern Water's propose plan to recycle sewage effluent into Drinking water. The plans have huge environmental concerns</p> <p>There are cheaper greener solutions</p>                                                                                                                                                              | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           | <p>1 The UK collects only 1 percent of rainfall ,despite predictions of wetter winters</p> <p>2 Repairing leaking water pipes which accounts for a loss of 19 per cent of Southern Water's supply losing 100million litres of treated water daily</p> <p>3 Investigate groundwater borehole schemes ,and aquifer storage, they require minimum infrastructure and are within the company's control and would protect the Rivers Test and Itchen from drought orders</p> <p>If this plan were agreed there is a risk of drinking water tasting differently as after treatment minerals have to be added to the water before it reaches our taps and this could drive people to use bottled water and this would have a huge enviroinmental impact</p> <p>There is a complete breakdown in Southern Water especially with the recent news in the National Press that Southern Water grading has been downgraded to 'junk' the only company to be downgraded in this way.</p> | <p>projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent.</p> <p>We acknowledge concerns raised about the need for HWTWRP and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>1. Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). HWTWRP is designed to provide water resources during droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |

|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Regarding the water tasting different, just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. We don't expect customers to buy bottled water when the water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. All water companies' provision of public supply is regulated by the Drinking Water Inspectorate, and further information about water recycling can be found on their website; <a href="https://www.dwi.gov.uk/water-recycling/">https://www.dwi.gov.uk/water-recycling/</a></p> <p>We are financially resilient and maintain a strong liquidity position, with the strong backing of our shareholders. They have injected more than £1.6 billion of fresh equity into the Southern Water group since they joined in 2021, and this financing has allowed us to spend £3bn during 2020-25 (or £1,500 per household) and implement our Turnaround Plan, to deliver for our communities and the environment.</p> <p>We acknowledge the ongoing challenges and uncertainty faced by all companies operating in the UK water and wastewater sector, but we are confident in our ability to deliver what we have set out in our future investment plans.</p>                                                                                                              |
| WRMP929   | I wish to object to Southern Water's revised plan to recycle effluent back into our drinking water and demand that a better, more sustainable way forward by selecting options that work with climate change to store winter water and not against it. Southern Water have selected options that are high energy and carbon hungry solutions. Southern Water need to invest more to repair leaks and replace main sewer to cope with our changing climate and conserve this important resource. | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent.</p> <p>We acknowledge concerns raised about the need for HWTWRP and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p> |

|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                                                                                    | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reductions in the amount of water we can take from the Test and Itchen rivers, we need to find sustainable alternatives. In addition, the length of pipeline adds to energy use, but is essential to move water around the network between existing treatment and supply infrastructure. To address the potential environmental impacts, including increased energy usage, of HWTWRP, we are undertaking a range of environmental assessments as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a>.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP930   | I am concerned about SW's unsustainable proposals and demand better solutions, such as fixing leaks, developing reservoirs, and utilising aquifer storage as an alternative to Effluent Recycling. | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent.</p> <p>We acknowledge concerns raised about the need for HWTWRP and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as aquifer storage. As outlined above, reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These additional options will help, but cannot resolve the deficit alone. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding developing additional storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is also considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |
| WRMP931   | <p>I am opposed to Southern Water building a plant for recycling final effluent from sewerage works to use for drinking water.</p> <p>We need to collect our rainfall more efficiently, as only 1% of rainfall is collected at present! This is amazing considering the rainfall we have in the UK.</p> <p>We need to either build more dams or underground confined aquifers, instead of a highly carbon hungry plant.</p> <p>Our environment is at risk tunneling and piling which would cause leakage in Langstone Harbour, where all the wildlife will be at risk.</p> <p>It needs to be closer to the sea to leave freshwater in our chalk streams.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is just one of many water resource projects/options contained in our Water Resources Management Plan (WRMP) covering our supply areas across Hampshire, Sussex and Kent.</p> <p>We acknowledge concerns raised about the need for HWTWRP and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>It is also shocking that Southern Water loose 100 million litres of water a day to leaks! We need to stop the leaks quickly.</p> <p>The environment needs to come before profit.</p> | <p>county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Regarding developing additional storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is also considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish, such as salmon. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Leakage reduction is included in our rdWRMP24 in addition to other water resources options, such as aquifer storage. As outlined above, reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These additional options will help, but cannot resolve the deficit alone. The chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP932   | I am extremely concerned about the proposed use of Havant Thicket Reservoir by Southern Water to recycle sewage effluent into drinking water that will then be supplied back to         | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>customers as "fresh" drinking water. The sewage treatment works cannot take all of the chemicals, pharmaceuticals, illegal drugs etc. out of the water in the recycling process.</p> <p>Southern Waters latest Draft Plan does not seem to make best use of our natural resources in that there is no plan to capture rain water in the wetter months for use during the dryer summer months. Our iconic and rare chalk streams should not be put under increasing pressure to supply water. These Chalk streams are extremely rare worldwide and support a fantastic array of wildlife which are under increasing threat by things like over abstraction, farm run off and raw sewage being discharged into them. It is an absolute disgrace that our precious rivers and streams have been treated this way. We must stop the over abstraction of our local chalk streams.</p> <p>The proposal in the Southern Water Draft Plan to tanker water from Norway during periods of drought is not sustainable or environmentally friendly. Rainfall collection and storage would be a far more sustainable plan to see in the Southern Water Plan.</p> <p>Southern Water loses 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet their slow programme for improvements means even by 2050 they will still be leaking about 10% of all the water they treat, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious mains replacement programme they will never get leakage under control. This is an absolute disgrace!</p> <p>Southern Water Preliminary Environmental Information Report (2024) confirmed a likely significant effect on the marine environment from the Hampshire effluent recycling scheme. Modelling for water quality impacts on the reservoir is still not available. The scheme should not move forward until the environmental risks/impacts are known. The water quality in Langstone Harbour is already hugely unacceptable with very high concentrations of chemicals, prescription and lifestyle choice drugs, hormones etc. that are having a detrimental effect on our already struggling wildlife in these areas.</p> <p>I am seeking reassurance that this scheme will not be given the Go Ahead in its current state. We are already one of the most nature depleted countries on the planet, this scheme will only make this statistic worse and there is a grave concern that human life will also be at risk with this plan.</p> <p>I look forward to receiving your response.</p> | <p>We acknowledge concerns raised about the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced. All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. HWTWRP is designed to provide water resources during droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex. We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions.</p> <p>Regarding sea tankering, this has now been removed from the plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>HWTWRP held a further consultation on water quality in March 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. The Environmental Water Quality Report in summary, shows that changes in water quality in Langstone Harbour would be small and are not expected to have any impact on biodiversity. The report also confirms that reject water from the water recycling process, which will be released into the Solent, is unlikely to affect water quality or the biodiversity of</p> |

The full report is available to download here <a href="https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf">https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP933   | <p>The following are some of my concerns having read through the proposal by Southern Water using the reservoir being built in Havant thicket at this time.</p> <ol style="list-style-type: none"> <li>1. As local inhabitants we were misled into thinking this reservoir would be a site for clean water storage from chalk streams and provide an area for some water sports, and recreational usage – good for the local wildlife, flora and fauna and for people. This has now changed to being part of an effluent recycling scheme.</li> <li>2. The way this scheme is supposed to work with the osmosis process is relatively new so how do we know it will work safely and well.</li> <li>3. This scheme is billed as a Drought Solution. Why not develop a scheme that will collect and store the naturally occurring rainfall of the winter months in aquifers. We are told that the winters are likely to become wetter.</li> <li>4. There are significant risks attached to developing this effluent recycling plant on top of a previous landfill site used to dump all sorts of industrial waste beside Langstone Harbour. The risk of problems occurring leading to contamination on land and in the sea is high, there must be safer and more accessible sites. For a start, building it so far from the final destination 40km away will cost a fortune in devising and building pipelines to transport the water.</li> <li>5. I understand that the taste of the water from the tap will change when/if the scheme is eventually finished and so likely to push more people into buying bottled water in plastic bottles which adds to a devastating pollution problem.</li> <li>6. I have also heard suggested that in times of drought Southern Water will tanker over water from Norway. The cost of that and the environmental implications are beyond imagining.</li> <li>7. Who will pay for this? The local general public of course in terms of disruption to roads, land and through increased water bills.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</li> <li>2. The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</li> <li>3. Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</li> <li>4. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</li> <li>5. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</li> <li>6. Regarding the viability of sea tankering, this option is no longer included in our plan.</li> <li>7.</li> </ol> |

|           | <p>Please require Southern Water to come up with NEW proposals, not slightly altered previously rejected ones. Proposals that are more viable in the long term, store the naturally occurring rain water, are less costly to the environment and our purses, less disruptive in terms of infrastructure and are sited closer to where the need for water is.</p> <p>I sincerely hope that the proposal will be seriously reviewed and revised to achieve the goal of managing precious water in a sustainable way and incorporating the collecting of enormous amounts of rainfall we get in the winter month.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP934   | <p>I am appalled at the revised proposal put forward by Southern Water in relation to the recycling of effluent for the new reservoir currently under construction at Havant Thicket.</p> <p>When the original plan was shared, some number of years ago, there were plans for the reservoir to also become a local amenity, with activities such as boating and fishing as well as various walkways. At the time, it seemed to be a reasonable compromise in terms of usage and local amenity vs. a much needed resource, considering the huge impact on the natural habitat destroyed in the process of building it.</p> <p>The current plan is of course much different, with the ridiculous idea of, in the event of drought, bringing water from Norway by tanker (at huge financial and environmental cost) as well as pumping water from the reservoir 40km to the [REDACTED] installation 24 hours a day, 12 months a year (another power-intensive operation), not to mention the health risks of drinking recycled water, especially in the event of equipment failure, and the pollution risks to Langstone Harbour from potential leachate from the Broadmarsh site.</p> <p>At the same time, Southern Water seems unconcerned at the huge amount of water leakage from the existing distribution system. Surely, it would be better to focus more on reducing this leakage and, at the same time, increasing the percentage of rainfall collected from the current (national) 1% figure, which seems derisory. Such additional rainfall collection would then need minimal processing as opposed to the cost, energy and risk of the proposed effluent recycling scheme. And given the current levels of effluent discharge into the sea, based on the current failure rates within their water processing system, I have every expectation that these breaches would increase, causing further damage to our precious offshore natural environment.</p> <p>This entire project smacks of someone who came up with the original hair-brained idea being determined to see it through irrespective of hurdles, costs and other reasoned arguments being put forward, not wanting to lose face, rather than admitting it was a stupid idea in the first place. I can only hope that common sense prevails and that the latest plan is thrown rejected with the additional caveat that and subsequent proposals take ecology into account rather than dogma and profit.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> |
| WRMP935   | <p>I am writing to object to Southern Water's proposal to recycle effluent from [REDACTED] to the new reservoir at Havant Thicket. I have lived in Rowland's Castle (a village adjacent to Havant Thicket) for 20 years and the proposed recycling scheme is a major shift from the solution</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>Southern Water promoted and discussed with local residents during the reservoir planning application phase.</p> <p>I am objecting to the proposed WRMP scheme on the grounds below:</p> <p>It is environmentally unsustainable and a massive waste of investment, engineering and energy SW should focus on reducing the substantial leaks of potable water from the current network</p> <p>The chalk rivers of the Itchen and Test could be protected better through the far more environmentally friendly solution of re-siting abstraction points closer to the tidal limit than importing recycled water across large distances from out of catchment locations.</p> <p>Southern Water's track record on transparency and probity is poor and the proposed WRMP technology is expensive and untested commercially in UK.</p>                                                                                                                                                                                                                                                                                                      | <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> |
| WRMP936   | <p>Following the rejection of Southern Water's draft Water Resources Management Plan last year, based on major objections from the residents (customers of Southern Water and Portsmouth Water) and the regulators, Southern Water has decided not to reevaluate their proposals or look seriously at faster, lower cost and sustainable solutions recommended by everyone except Southern Water.</p> <p>Instead, Southern Water have just regurgitated the same [redacted] retreatment and reuse of the Havant Thicket plan to supply Southampton – but now with the addition of some unsustainable options such as stopping all abstraction from our rivers (which is unnecessary) and buying water from Norway – looks like a sacrificial ploy to redirect attention. The original and approved plan for Havant Thicket to serve the Portsmouth Water customer-base does not even get a mention.</p> <ul style="list-style-type: none"> <li>At no stage in either Plan has Southern Water followed the guidelines to ensure meaningful community engagement during the formative stages. Why are Southern Water allowed to</li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October–November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35–40 minutes with the remaining time allocated to Q&amp;A.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>disregard this directive? In addition, Southern Water have not satisfied a legal requirement for a new statutory consultation on the treatment works proposed.</p> <ul style="list-style-type: none"> <li>• The key documents on alternative solutions are hidden away in a safe at their HQ under a national security banner – as a consequence there is no evidence of any reappraisal by Southern Water in the public domain. There can be no reasonable justification for the alternatives to be secret when Southern Water's chosen option is not!</li> <li>• The Southern Water option remains as cleaning up the waste water from [REDACTED] mixing it with the existing spring water in Havant Thicket (now used as a storage buffer) and transporting the result 40km to Southampton. The cost of this solution, when completed sometime after 2035, will be close to £2billion. (We could have six new reservoirs for that kind of money, all of which could be sited nearer the areas of need. The proposed sites for the Retreatment Works and links to [REDACTED] [REDACTED] are in an area of rising flood risk and are on top of two toxic waste dumps.) Putting all our eggs in Southern Water's single basket demands a much higher level of scrutiny over the alternatives by an independent authority. This is probably the most expensive solution for us who have to pay – but the most economically beneficial for Southern Water.</li> <li>• The facts to consider are that the UK is projected to be getting warmer and wetter. We currently only save 1% of the rainfall, and 25% of Southern Water's output is lost o leakage. So the primary objective should be to store the water when excess is available – ie of the time – for use during periods of drought. The better solutions include: <ul style="list-style-type: none"> <li>- Fix the leaks</li> <li>- Move all river abstractions to the point where they meet the sea</li> <li>- Plan more reservoirs and aquifer storage – three reservoir sites are already identified</li> <li>- Look to open up unused and private abstraction permissions</li> <li>- Use the existing Hampshire water grid to move water around</li> </ul> </li> </ul> <p>These solutions would satisfy the need without the most expensive and unnecessary high-tech solution, which only Southern Water favours. It cannot be acceptable for the people who will have to pay for whatever solutions are chosen to have no say in the strategy or preferred options. On top of this, Southern Water have included a new short-term stopgap – starting up an eight-strong tanker fleet at huge cost to ship water from Norway to Southampton to a new treatment works to clean and remineralise the water, and then pour it into the rivers. This proposal leaves all of the communities speechless !</p> <p>We are looking to you, Secretary of State Reed, to inject a sense of proportion and reality into this matter, and to commission a complete independent review of the sustainable options, leading to a meaningful engagement with all stakeholders.</p> | <p>We released a press release regarding the consultation, which was picked up by major newspapers; <i>The Guardian</i> and the <i>Financial Times</i>. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.MPs, stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022–2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Regarding the use of under-utilised private supplies, this is an option we are reviewing in 2025 as part of the next Water Resources Management Plan.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> |
| WRMP937   | <p>I am writing to lodge my objections to Southern Water's Effluent Recycling Draft plan. Having read the wealth of information there is, it is astonishing that Southern Water proposes such a plan which, on any level, is not acceptable. Southern Water has a chance to redress some of the many things they have done wrong by getting it right this time. What they propose is not getting it right. They have an opportunity to develop a plan that is sustainable and I plead with you to listen to my concerns and the concerns/objections of others. I am not an articulate person and I have reused some of the wording that I have read but it nonetheless reflects how I feel.</p> <p>Tankering in water from Norway during a drought is not a sound proposal. It just plugs a gap and is expensive and unsustainable. Customers and the environment deserve a better proposal. The cost to customers of tankering in water will be enormous. There would be an ecological impact by placing temporary pipelines along the River Test. There is a risk of leakage if a pipe bursts, which could impact fish and other species that use the river, as well as the risk of importing non-native species.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the financial costs of sea tankering, this option is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>Just in the past few days alone, we have had so much rainfall and new reservoirs have to be an answer. We get a great deal more rain due to climate change and creating new reservoirs would not only store more water but would be beneficial to wildlife and provide recreation for our communities. So little of the rainfall in the UK is collected and this is scandalous. Confined underground aquifers to store winter water are used around the World and I believe Southern Water should undertake investigation and development now not delay until 2029. Southern Water already own the land to do this and it has already been assessed to have no likely impact on the River Test. Trials for a similar scheme were successful in Dorset.</p> <p>Southern Water has an unacceptable record of failures with regard to pollution incidents and it is difficult to trust them to operate a complicated effluent recycling system. I don't want apologies after an event or for Southern Water to say we will learn from our mistakes, after another failure (and there will be one), I want a sound, environmentally friendly plan that is based on doing the right thing, not the most profitable things. There is a significant additional risk of pollution from the proposed recycling plant, especially if it is not maintained correctly.</p> <p>Southern Water need to be thorough and prompt in reducing leakage losses. I reported a leakage of water to them and it took many phone calls and many weeks before they repaired the leak. When this is multiplied catchment wide, it is appalling how much water is wasted. There was also another incident which I reported, in a cold snap. The water leaking spilled onto the pavement and iced over and many people, including me, slipped on the ice. I finished up in A&amp;E. Again, it took several weeks before the leak was fixed.</p> <p>It is possible for Southern Water to move river abstractions closer to the tidal limit. If they did this, it would protect many miles of the main river from public water abstraction, as well as providing benefits to the Itchen and other channels. Also, it would largely resolve the immediate problem in Hampshire.</p> <p>This is a high energy proposal, making it hard to believe that it will provide good value. There has been inadequate public consultation before effluent recycling options were selected.</p> <p>There is an enormous amount of concern about the environmental impact of effluent recycling schemes, particularly with the discharge to the Solent. The discharge will be significantly more concentrated than the existing sewage effluent discharged.</p> <p>I would ask DEFRA to encourage development of sustainable solutions.</p> <p>Southern Water are proposing the second highest increase in Water Rate charges in the country, something which is incredibly unfair. All water charges should be the same countrywide. Southern Water should do the right thing and put forward an alternative proposal, which is environmentally sound.</p> <p>Thank you for reading my objections.</p> | <p>shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| WRMP938   | <p>I should like to put on record, that I wish to add just some of my serious worries about the above plans that I have encountered so far, and to support any objections to them already sent to you, which resonate with me.</p> <p>In spite of information to the contrary, I have heard little by way of public consultation with S.W. The question, were it put, is easy to answer: Would you rather the source of your drinking water come from river, spring or ground water, or alternatively from recycled effluent? To my way of thinking, there is only one acceptable answer. Forty so-called consultation documents are hardly likely to be bedtime reading for many. Were they really consultations or is the quantity solely to put off objectors? Even the assurances given by S.W. that appropriate information on water effluent recycling would be available for 2024 consultations, have apparently not been met and, I believe, some critical documents have even been restricted. Why, I wonder?</p> <p>With the world currently seriously focussed on overcoming Climate Change, I have yet to see anything that shows that S.W. are including it in their own concerns and remedies. Their plans are not long-term but seem more to be stop-gap answers. I will not burden you with repeating all of the many arguments I have read, put forward by more knowledgeable even more concerned people who have doubtless written to you already at length, with intelligent solutions for your consideration. Those I sincerely trust you will take heed of, and act accordingly, but I will venture to mention just a few supporting comments which I have noted. These I hope, will continue to show you how many people are not satisfied with S.W.'s Revised Plans, and ask you to reject them.</p> <p>This year more than any I can remember, has seen more rain, flooding, damage to homes and unhappiness for many people because of it, than ever before. To try and remedy this in any ways at our disposal, should be paramount in any solutions, and to endeavour to harness so much 'free' water, of which, to date I gather, we collect only one percent. Options that work with predicted climate changes should have been included in the revised draft plan. We can't just ignore it. Surely it is not beyond the skilled in that area, to devise suitable solutions. I have seen some ideas mentioned. For instance: Ground water schemes on the I.O.W. like free water-butt schemes, could be used in the South West; other reservoir schemes; making as a priority schemes to increase the capacity at existing works; network upgrades, as in Hampshire; and apparently more investigation of aquifer storage schemes also in Hampshire; W. S0u0ssex and the I.O.W. are not being prioritised. Surely these are urgent? Too many possibilities seem to be being ignored. Instead, their plan focuses on how they can fill the supply deficit in a drought before the previously selected effluent recycling schemes are due to operate. The final straw is, as I understand it, that effluent recycling and transfer via Havant Thicket, which is close to me, and due to be available in 2035 results in unacceptably high carbon impact and greenhouse emissions. Aren't we trying to reduce these emissions overall? It will ultimately transfer recycled water via long pipelines that have to operate every day (not just in a drought) to [REDACTED] (near Winchester, Southampton and the I.O.W) plus W. Sussex. Portsmouth Water customers will also receive the recycled effluent to their taps when the reservoir is used,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback. We note the objection to the use of recycled water in Havant Thicket.</p> <p>We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) on in 2022–2023 and, following changes, we consulted on our revised draft WRMP24 in 2024. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October–November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35–40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which, went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. We have received 1176 responses as part of rdWRMP24 consultation.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket</p> |

|           | <p>initially in a drought or emergency, but from 2040 more routinely. If it cannot be delivered by 2030 S.W. will reject it. We need sustainable solutions available for use in 2035 and beyond. Sadly, I am unlikely to around to benefit by then, but many who care will be.</p> <p>As for tankering water from Norway in a drought, I've never heard anything so ridiculous in all my nearly 89 years, not to mention the actual cost, and the challenge such a scheme would present. The idea is surely not sustainable. We should rely on our own abilities and solutions, which are many if only we look for them. Surely it is not beyond the brightest brains in our own country to devise some way of saving the generous rainfall we have had and, doubtless, will continue to have, if we do nothing to save it ourselves.</p> <p>I understand that S.W. have not taken into consideration the completion of the Hampshire Grid Improvement Programme, which should be available from 2030. This would transfer water within Hampshire by merging existing zones and, if taken into account, could have changed the options appraisal process. Sounds reasonable to me.</p> <p>My final observation is that S.W. have shown no interest in preventing water leakage in their system? Do they know how to do it? There has been no sign so far as I am aware. I understand that S.W. loses 100 million litres of treated water daily through leaks - 19 percent of their supply. If they have no plans for control in that direction, then any other options for us to save water will be in vain as far as, I am reliably informed, up to and beyond 2050! Save it with one hand and then lose it with the other is unacceptable.</p> <p>As an old lady who cares, but will not be around to benefit, please reject their profit driven plans and ask them to consult again properly and seriously, those who have reliable and sustainable solutions. This seems to be a once-in-a-generation chance to find the right solutions and I, and others who care very much, feel we do have the right people to offer them, if only S.W. will bother to do so..</p> <p>Yours ever hopeful,</p> | <p>Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> |

|           | <p>sustainable including reduction of water leakage.</p> <p>Instead they want to build at Broadmarsh ,which will possibly,probably,contaminate Langstone Harbour plus the high cost of transporting the recycled water .</p> <p>Add to that the cost of paying to tanker water from Norway ,seriously?</p> <p>It is predicted that we will experience wetter winters so why are there not plans to collect and store rain water ?</p> <p>On a side note a lot of people have expressed concern about drinking effluent recycled water so would that not led to an increase usage of water in PLASTIC bottles ?</p>                                          | <p>programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> |
| WRMP940   | <p>I object to this plan.</p> <p>This plan ignores the United Kingdom Technical Advisory Group (UKTAG) report, United Kingdom Environmental Standards and Conditions. This report shows quite clearly that the flow of freshwater into the saline estuary of a river can be reduced by more than sufficient to meet any foreseeable shortfall.</p> <p>By failing to recognise this report, the company is forced into continuing to take as much water as possible from inland waters. This will continue to cause environmental damage and it forces the company to look for alternate environmentally damaging, expensive, high energy use solutions.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding your view on the UKTAG report, your comment has been noted.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>The United Kingdom Technical Advisory Group was established by all parts involved in the water industry to transfer the terms of the European Union Water Framework Directive into UK regulation. Its proposals have been approved. Its recommendation that flows into estuaries can be reduced make it possible to obtain the necessary water with minimum power use.</p> <p>This makes this draft water resources management plan, draft WRMP24, in clear contravention of the Paris Climate Agreement.</p> <p>I have written a number of responses to both draft WRMP24 and WRMP19. Those responses are still to be taken into account. This is a plan based on failure. It can only work by telling the customers to use less water, up to 40% less water. Even then it finishes by telling the customers that, after they have reduced demand and paid £billions for new works, the company will still need to impose water restrictions. None of this would be necessary if the UKTAG report, United Kingdom Environmental Standards and Conditions, is implemented.</p> <p>This plan, draft WRMP24 should not be approved until the industry, the regulators and the government properly asses the UKTAG report and determine whether or not it should be implemented.</p>                                                                                                                                                                                                                                                                                                | <p>We thank you for your engagement and feedback with our rdWRMP24 consultation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP941   | <p>I consider key issues to be:</p> <p>The amount of current leakage is high at 100 million litres/day and there is insufficient focus on reducing this as a priority, as a starting point.</p> <p>Tankering in water from Norway cannot be considered a credible drought option – being very high cost, is a non-local solution with security implications – and risks importation of non-native flora contamination.</p> <p>Much more should be made of capturing surplus winter rainfall and storing this for use in drought periods, including additional new reservoir schemes for the purpose.</p> <p>The plan does not adequately protect the chalk aquifers and chalk streams. These would be better protected by extracting water downstream just before rivers meet the sea. Population growth forecasts are not aligned with ONS statistics. Southern Water should be planning on population growth aligned with ONS and national government plans, which are lower, providing time to start again and develop alternative more sustainable and lower cost solutions</p> <p>Waste streams from the proposed effluent treatment plants discharge into environmentally sensitive areas, with the potential for significant damage. Effluent treatment is also assumed to run 24hrs/day throughout the year, even when there is high rainfall, full rivers and reservoirs. This has a large cost and negative environmental impact. Alternative plans are needed to reduce/eliminate dependency on effluent treatment and provide environmentally sustainable solutions</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on</p> |

|           | <p>I urge you to reject the plan and direct Southern Water to develop alternative proposals that better address leaks, capture and store rainfall, protect chalk streams and aquifers, protect environmentally sensitive shorelines and are affordable</p> <p>Thank you for considering my views</p>                                                                                                                                                                                                                               | <p>the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |
| WRMP942   | <p>The Southern Water proposals concerning Havant Thicket are ridiculous. There is surely a better way.</p>                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP943   | <p>I write in response to the request for comments on the proposals by Southern Water to develop an effluent recycling scheme to provide additional water supply, principally in times of drought, in parts of southern Hampshire and West Sussex.</p> <p>There are elements of this scheme which I find frankly most disturbing and I can only urge the Secretary of State to look very carefully at some of the detailed submissions that have been made by various interest groups who are concerned about these proposals.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p><b>1. Have the possibilities for the creation of new reservoirs, in addition to the Havant Thicket project, been fully considered?</b></p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>Several key points should be considered:</p> <ol style="list-style-type: none"> <li>1. Have the possibilities for the creation of new reservoirs, in addition to the Havant Thicket project, been fully considered?</li> <li>2. Would it not be more cost effective to spend resources on reducing the current rate of loss (about 19%) from the existing distribution network?</li> <li>3. Climate change modelling suggests that we can expect warmer, wetter winters. Have the benefits of confined aquifer recharge schemes been fully explored. There are several possibilities for such schemes across the region. These can represent relatively simple, low-cost adjuncts to water supply for use, particularly in times of drought.</li> <li>4. The effluent recycling scheme relies extensively on a complex engineering chain with reverse osmosis technology at its heart. Reverse osmosis is extensively used worldwide, principally for desalination and is now robust technology in that situation. However, it is highly energy intensive and the absolute requirement for the removal of solids before water is pumped through the reverse osmosis modules is a significant challenge. Also, it would be necessary for Southern Water to give absolute assurances that no inappropriate contaminants could pass through the process. This would not be the relatively simple desalination of seawater, rather the purification of contaminated effluent from a highly populated and intensively industrialised conurbation in southern Hampshire.</li> <li>5. Moving the treated water from Havant to the distribution point in the Southampton area will require the construction of a 40km pipeline and building pumping stations, each of which will inevitably require significant energy input. Is this really an appropriate engineering solution?</li> <li>6. Southern Water's fallback solution, in case of drought, is to bring water by tanker from Norway. The cost, the energy requirements, the ecological dangers and the distribution</li> </ol> | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p><b>2. Would it not be more cost effective to spend resources on reducing the current rate of loss (about 19%) from the existing distribution network?</b></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p><b>3. Have the benefits of confined aquifer recharge schemes been fully explored?</b></p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p><b>4. Concerns about the complexity and risks of reverse osmosis as a treatment method.</b></p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p><b>5. Concern about the energy use and infrastructure of transporting water 40km.</b></p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> |

|           | <p>difficulties of bringing water to southern Hampshire in this way surely outweigh any possible benefits. To be frank, this is a ludicrous proposal.</p> <p>I am far from convinced that effluent recycling is a sensible, cost effective and fully thought-through engineering solution to the issues surrounding the continuity of water supply in this region. I urge the Secretary of State to reject this proposal.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p><b>6. Objection to the tanker plan to import water from Norway.</b><br/>Regarding the viability of sea tankering, this option is no longer included in our plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP944   | <p>The water industry has always recognised pumping water over long distances should only be used when all other option have been investigated due to energy requirements and consequent costs to customers</p> <p>I am concerned by OFWATs proposal to fund the effluent recycle in Hampshire. The scheme uses the most resource hungry process then pumps for 40km for further processing. Customers will be shocked by the eventual cost and not at all impressed when possible alternative schemes come to light.</p> <p>Energy security is already of significant concern, developing energy intensive solutions makes things worse. Greener and cheaper alternatives are not being properly investigated and brought forward.</p> <p>We get plenty of rain in the winter, Southern Water should be developing solutions that store that free natural water for use in the summer.</p> <p>To risk contaminating a reservoir originally conceived to be filled with excess winter spring water by filling the reservoir continually from [REDACTED] STW will result in very little of this spring water being stored. If there is a contamination emptying the reservoir and decontaminate would probably take a whole summer.</p> <p>There has been a lack of public consultation.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |
| WRMP945   | <p>This is to advise you that I wish to object to Southern Water's plan for an effluent treatment plant at Langstone Harbour.</p> <p>As a qualified industrial chemist who has gained considerable experience with reverse osmosis (R.O.) plants, I am acutely aware of the membranes' susceptibility to damage by many different chemicals which could render them less efficient and could, in turn, introduce pollutants into the water supply. About 16% of the raw sewage arriving at [REDACTED] is industrial effluent which includes discharges from various plating companies which can include highly toxic cyanides.</p> <p>The discharge from the concentrate line of the R.O. plant will change the nature of Langstone Harbour's water's chemical and biological composition which could include pollutants.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We acknowledge your comment that the effluent substrate itself may contain compounds that can damage the R.O. membrane, asset management processes will be designed to take this into account throughout the life of the membrane.</p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>There is no independent monitoring proposed as Portsmouth Water will rely on S.Water for analysis and control.</p> <p>The construction of a 40Km. pipe line from the plant to [REDACTED] will be very expensive and require a high energy loading as it will have to traverse Portsdown Hill behind the plant.</p> <p>Local residents will be concerned regarding their water supply and buy bottled water which will increase plastic waste and require a high carbon footprint.</p> <p>Alternatives:</p> <p>Move the current water extraction plants closer to the tidal limit of the rivers which would protect the upstream water from drought etc.</p> <p>Develop contained underground aquifers to store winter water.</p> <p>Develop new reservoirs</p> <p>Conduct effort to reduce water leakage from pipeworks.</p> <p>I apologise for the length of my email, but it is a serious matter and deserves careful consideration.</p> | <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP946   | <p>With reference to the Havant (Hampshire) "New Water" Scheme.</p> <p>I am totally against this Scheme of mixing Portsmouth Water's New Reservoir (Chalk Stream Water extract) with Southern Water's "Effluent Recycling" water, which is usually dispersed into the sea after treatment, BUT plans are afoot to MIX the two waters for future "New Drinking Water" for this area.</p> <p>There are many reasons why this Scheme is not in the public interest.</p> <p>It is my understanding that:</p> <p>Southern Water are proceeding with this Scheme without fully considering alternatives (Tunnel Vision).</p> <p>However, they do have numerous other possible scheme but have 'parked' them, without consideration until 2029.</p> <p>They are withholding vital information from the public by "blocking access" to information documents.</p> <p>Apparently there will be NO Local Planning Application.</p> <p>The cost of pumping "Effluent Water" from Bedhampton up to Havant Reservoir, mixing water and returning back to Bedhampton for distribution will cost in the region of £3million per year, just for energy to operate this system.</p> <p>The infrastructure cost of laying pipework from Bedhampton to the planned site at [REDACTED] (South of Winchester) is going to cost at least £1.2billion.</p> <p>It is estimated that the The Site will be "REDUNDANT" within just 60 years!!!!</p> <p>The Reservoir membranes will only last 5 - 8 years then should be replaced which will be costly.</p> <p>Will Southern Water replace them within that time span?</p> <p>Southern Water even plan to 'tanker water' in from Norway, which is none compatible with our water as it is too acid.</p> <p>The "New Water" will taste different.</p> <p>PFAS, PFOS and PFOA are dangerous chemicals. Known as "Forever Chemicals" which are present in many products and are toxic. These are found in "effluent water" and are dangerous. They are banned in many States in the USA with Zero Limit in many States. In the UK the limit in drinking water is around 120 ppb and expected to go lower. There will need to be lots of</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> |

|           | <p>treatments using Activated Carbon to clean the water to meet the limits. This is extremely expensive.</p> <p>PFAS - Perfluoroalkyl and Polyfluoroalkyl Substances, can cause liver damage, thyroid disease, obesity, fertility issues and cancer.</p> <p>PFOS - Perfluoro-octane Sulfonic Acid, can cause lower birth weights, decrease antibodies in young children and increased cholesterol in adults.</p> <p>PFOA - Perfluorooctanoic Acid, can cause birth defects or other reproductive harm and increase risk of cancer.</p> <p>More research needs to be done on the long term effects to human beings before the public are forced to drink this "New Water".</p> <p>Southern Water Bills are already very high and Southern Water plan to increase the amounts considerably higher. The public deserve a better service from Southern Water than they are currently receiving for their payments.</p> <p>The current plans for this "New Effluent Mix Water" should be stopped and less expensive, safer alternatives explored before proceeding.</p> <p>Thank You.</p> | <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> |
| WRMP947   | <p>I am very concerned the Southern Water could be pumping treated effluent into a drinking water reservoir in Havant. We know how they have failed pumping sewage into Chichester Harbour so don't let them do what isn't needed in a reservoir.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP948   | <p>Fao Secretary of State Steve Reed<br/>Consultation re Southern Water's revised Water Resources Management Plan.<br/>Introduction.<br/>I would like to register my objection to this scheme on the following grounds.<br/>Process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>The public consultation process has been wholly inadequate. All SW and PW customers will ultimately be affected yet neither company has directly contacted them. Clear information about this costly, complex scheme has not been widely available and there seems to have been no official summary of the environmental consequences or alternative solutions.</p> <p>Sadly I think you would find many locals are wholly unaware of this proposal, of this consultation and of the crucial decision which no longer rests with HBC but with the SoS.</p> <p>The aspect which has received some publicity has been that treated wastewater is to be added to the new spring fed reservoir by a process which although used in other parts of the world has not been used in this country.</p> <p>I greatly fear that those protesting solely on these grounds will be dismissed as luddite so would like to list a few of the other reasons to object which I am sure would have featured more if the details had been widely known</p> <p>Is this the right scheme?</p> <p>We do not need to start expensive processing of wastewater to increase supplies of drinking water for future needs. We are not water poor, PW has never needed to impose a hosepipe ban. We get plenty of rain, and wetter winters are predicted, but we currently store less than 2% of this free water supply. We also currently waste enormous amounts of treated drinking water. There are alternatives</p> <p>Due consideration should be given other ways of increasing supplies for the predicted future population growth and effects of climate change, such as</p> <ol style="list-style-type: none"> <li>1. developing a full range of storage facilities for excess rainwater including small reservoirs, aquifers, lakes, wetlands, tanks and rain butts closer to demand.</li> <li>2. rolling out a comprehensive leak repair programme. SW currently loses 100million litres per day of purified water which is clearly unacceptable. Reducing this to 50million litres a day by 2030 would alone supply all the extra water SW is planning to provide by reverse osmosis to meet predicted need.</li> <li>3. introducing universal metering to better control consumption and waste,</li> <li>4. advising planners of the need to limit inward migration and new development so that demand for SW's services is limited to what it is possible to supply.</li> </ol> <p>The Wastewater Recycling Proposal has huge environmental consequences</p> <ol style="list-style-type: none"> <li>a) Impact on Langstone Harbour/Solent of <ol style="list-style-type: none"> <li>i) leach from deep drilling into the derelict Broadmarsh industrial waste dump on the shore's edge, where the huge reverse osmosis plant is to be sited and</li> <li>ii) discharge into Langstone Harbour and Solent of the highly concentrated remaining waste products.</li> </ol> </li> <li>b) Damage by construction of the enormous pipework system through Havant to HTR and to the [REDACTED] Pumping Station (40km away).</li> <li>c) Carbon footprint/water quality <ol style="list-style-type: none"> <li>i) The construction process will be carbon-intensive, and the daily energy and chemical consumption of pumping and processing will be huge.</li> <li>ii) Adding the treated wastewater to the spring water will change the water quality and risk pollution from the inevitable malfunctions.</li> </ol> </li> </ol> | <p>November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Smart metering underpins our demand management strategy. However, smart metering is primarily a tool for gathering data and information. We recognise that it is the effective use of the information provided by smart meters that will ultimately deliver water efficiency, not the mere installation of smart meters themselves. As part of our smart metering strategy, we will be looking at tools and platforms to maximise the benefits of smart metering. We are aiming to reduce PCC to 110l/h/d under dry year conditions by 2045. This is 5 years ahead of the 2050 target date set by the Government.</p> |

|           | <p>Trust.</p> <p>SW is debt ridden and has consistently proved unable to provide adequate wastewater disposal for its existing customers. Chichester/Langston Harbours, and the chalk streams flowing from the Downs are routinely poisoned. It surely cannot be sensible to entrust this company with constructing and managing such a complex and costly scheme.</p> <p>Conclusion</p> <p>For these and many other reasons I urge the SoS to refuse this proposal and call for full and proper public consultation, publication of detailed environmental impact analysis and option appraisal before the matter is reconsidered.</p> | <p>We will continuously monitor the effectiveness of our demand management initiatives and closely follow developments in this area across the UK water sector. If needed, we will modify our approach and adopt new technology to achieve greater demand savings and/or to achieve them earlier. Issues concerning the numbers of people moving in and out of the region are outside Southern Water's remit.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver</p> |

They have injected more than £1.6 billion of fresh equity into the Southern Water group since they joined in 2021, and this financing has allowed us to spend £3bn during 2020-25 (or £1,500 per household) and implement our Turnaround Plan, to deliver for our communities and the environment.</p> <p>We acknowledge the ongoing challenges and uncertainty faced by all companies operating in the UK water and wastewater sector, but we are confident in our ability to deliver what we have set out in our future investment plans and that when the Competition and Markets Authority (CMA) makes its PR24 determination it will provide sufficient funding for the investment in the 2025-2030 period.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP949   | <p>Dear Sir, I wish it to be placed on record my objection to Southern Water's draft WRMP and call on Defra to reject it. My main reasons can be summarised here as follows;</p> <ol style="list-style-type: none"> <li>1. SW is driving forward the most expensive and environmentally damaging scheme of those few options it has considered, to address the potential of a 1-in-500-year bad drought for the area to which it supplies water. This is within the current climate change context.</li> <li>2. The Hampshire effluent recycling scheme at Havant will be required to run 24 hours a day pumping 30Ml/day 40km to [REDACTED] throughout the year, even in prolonged periods of wet weather when the rivers are full and groundwater is high. This is at a high financial and environmental cost.</li> <li>3. SW's WRMP is developed to ensure that effluent recycling projects are prioritised, rather than looking properly at the less costly and varied options that collectively could deliver much of what is needed both in terms of additional supply and reduced demand.</li> <li>4. There has been a lack of meaningful and honest engagement with the Company's customers who will pay and also with those of Portsmouth Water (PW) who will receive the recycled effluent whenever PW need to draw on the reservoir.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</li> <li>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</li> <li>2. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</li> <li>3. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</li> </ol> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           | <p>5. Importantly, SW did not follow the legal requirement for a new statutory consultation on their plan when there was a material change to the option(s) selected in 2021, when both the [REDACTED] desalination scheme and the WRMP19 back-up option of discharging recycled effluent to the River Itchen were rejected.</p> <p>6. It is an unbelievable option that SW now propose to bring water in tankers from Norway if a drought occurs in the next 10 years instead of proactively investigating more sustainable solutions. The absurd selection of this option should be rejected emphatically.</p> <p>7. SW assert that they are most concerned to protect the chalk streams like the Test and Itchen but have failed to work on moving the abstraction point from [REDACTED] to near the tidal limit.</p> <p>8. There is insufficient attention being paid to Demand Management. Not enough effort is being devoted in the first 10 years to really driving down demand through education and advice to residential customers and non-household users.</p> <p>9. There is insufficient attention being paid to reducing leakage with a reduction of only 53% by 2050, which is 25 years away. It is known that 100ml/day is being lost by SW through leakage, water that customers have paid to treat. To reduce this loss to only 50ml/day after 25 years beggars belief, much more effort is needed to tackle this problem so that SW need to take less water from the environment in the first place.</p> | <p>4. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>5. With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here: <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>6. Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>7. We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>8. We are aiming to reduce PCC to 110l/h/d under dry year conditions by 2045. This is 5 years ahead of the 2050 target date set by the Government.</p> <p>We will continuously monitor the effectiveness of our demand management initiatives and closely follow developments in this area across the UK water sector. If needed, we will modify</p> |

|           | <p>These represent merely a number of summarised issues that should provide DEFRA with adequate evidence that the plan is unworkable and should be rejected. I hope that common sense can prevail.</p> <p>Yours faithfully</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>our approach and adopt new technology to achieve greater demand savings and/or to achieve them earlier.</p> <p>9. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP950   | <p>To whom it may concern,</p> <p>I wish to express my deep opposition to the above proposals by Southern Water as totally unfit for purpose on the grounds of colossal financial cost, appalling environmental impacts, disregard for the consideration of ever increasing amounts of rainwater, a dreadful record of Southern Water's management of this precious resource, amongst many other negatives.</p> <p>The estimated costs of the project have risen from 500-900 million pounds in June 2023 to 1.3 billion pounds in June 2024. That's just one year. As evinced from other major capital projects this is just the start. Imagine the final bill. It hardly bears thinking about.</p> <p>That's not even considering the on-costs of running the system using vast quantities of chemicals and very expensive filtration membranes to end up with a water quality that's a poor substitute for the natural water that we have today.</p> <p>Additionally, pumping water FORTY KILOMETRES to [REDACTED] every day of the year irrespective of whether sufficient rainfall is evident or not. It's madness! Who will pay? Southern Water's customers initially and doubtless Portsmouth Water's not long after.</p> <p>Then of course there's the discharge of concentrated reject waste water from the Boadmarsh WTP through the [REDACTED] Long Sea Outlet into the Solent and other environmental impacts within the area.</p> <p>There are many more cost effective and environmentally suitable alternatives available but it seems the Southern Water want to go ahead with most expensive, environmentally damaging, costly to run scheme that produces the least desirable version of a substance essential to life itself.</p> <p>The scheme, as I said in my opening, is totally unfit for purpose and should be soundly rejected.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> |

| WRMP951   | <p>I wish to oppose the Southern Water Havant Thicket water retreatment planning application. My reasons are:</p> <p>It is the highest cost option and was only selected as it gives Southern Water a huge profit.</p> <p>There are many lower cost alternatives which make it obsolete.</p> <p>The site chosen is a toxic waste dump and subject to flooding and coastal erosion.</p>                                                                                           | <p>Thank you for reviewing our rdWRMP24 and providing feedback. We note your objection to use recycled water in Havant Thicket.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. Our regulators the EA, NE and Ofwat are independent from Southern Water and they undertake an analysis of our plan. Their analysis looks at all aspects of the Gate submission, including the options and risks. Our SoR shows the feedback we received from these regulators and how we have responded to it</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |
| WRMP952   | <p>I object to this expensive and unnecessary project.</p> <p>Effluent recycling plant constructed on a landfill site that was for decades used by Portsmouth Dockyard to dump their materials from the waste products removed from Naval Ships during refit.</p> <p>Similar MOD dumping grounds from the Naval Dockyard in Portsmouth such as Baffins pond and the Hillsea old Marshlands cleansed to enable Lord Nelson School to be constructed upon this sanitised site.</p> | <p>Thank you for reviewing our rdWRMP24and providing feedback.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           | <p>Such toxic cleansing operation requires a major financial investment and several years of removal and disposal with the risk of more investment if the site has other very toxic material such as blue asbestos and arsenic and or many other such toxic lagging materials many dockyard ladders and sailors died from lung cancer and other such respiratory terminal illnesses .</p> <p>Disturbing this tip and building into these grounds is an ecological disaster waiting to happen and places all who work on such a projects at risk of industrial injuries and adds a massive cost to this project.</p> <p>Toxic tip disturbance will be increase project costs and and place Langstone at risks of major Harbour pollution from the toxic waste tunnelling and pile driving will open fissures to allow toxic rain water contaminated by the Toxic dump material into the Harbour to add to the Sewage waste and forever chemicals contained within sewage waste water and potentially the wast material within the dump could also have forever too chemical items contained within it</p> <p>All such MOD land fills are not as is being presumed a cheap option, Farlington Fields required years of military shell clearance, shells having been a WW1 storage site.</p> <p>I also agree with all the other objection with regard to effluent recycling health risk and question why Southern Water and concealing the fact that their drain of the South Downs Aquifer is i believe the primary reason for the necessity to utilise recycled effluent water alongside all its cost and health risk.</p> <p>Aquifer drainage of Ice age water storages deep under ground is being drained across the globe at an alarming rate focussing on their protection and limiting extraction through the plugging of all water supply pipes across the Southern water will more than resolve the need to drink recycled sewage with an even higher likelihood of causing health issues due to the increase concentrations of forever chemicals that enter the sewage system from industrial waste.</p> <p>Effective and efficient cost saving through the water network upgrade of Southern Waters Infrastructure.</p> <p>Southern water targets to avoid loss of water due to failing pipe distribution system. Save at source of supply not post supply through sewage recycling as is being proposed sort the problem at source:</p> <ul style="list-style-type: none"> <li>• Avoid loss of water by the elimination of a leaky water Network as suggested.</li> <li>• Add to National planning policy the necessity to capture rain water before it enters the sewage system on all new builds based on a building size whereby introduction will create a return cost benefit..</li> </ul> | <p>landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP. The options requirement network enhancements in the Central area were not taken forward the required enhancements could not be delivered by 2030. These will be reconsidered for WRMP29. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This will also require the entire housing stock across our supply are to undergo modifications in internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level.</p> <p>We are working on several pilots funded by our water efficiency fund looking at how rainwater</p> |

This is an option that can be considered for new builds.</p> <p>Our water efficiency plan includes helping non-household customers reduce their consumption through smart metering and water audits as well as a collaborative fund to promote water efficiency.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP953   | <p>We totally unhappy with the proposal by Southern Water and Portsmouth Water to make use of recycled sewage water for a number of reasons. Judging Southern Water's track record on sewage discharges, their ability to responsibly process sewage into clear hygienic drinking water must be of primary concern. Southern Water have a near to zero trust record with it's customers. The risks of this proposal is that pathogens and microbial residues in the water are a danger to human health. The siting of a reprocessing plant on the banks of Langstone Harbour are also of major concern due to the water rejection process being discharged into the harbour. By Southern Water's own admission, this will have nearly a four time harmful impact than current sewage discharges. Pumping this scavenged water and sending up to the new reservoir at Rolands Castle is power intensive and yet again is a rush to a solution which should not be needed. Given that only 1% of the natural (unpolluted) rainfall is collected, this ought to be one of first thoughts when looking for for new supplies. With the money being proposed to be spent another priority must be to fix the 190 million litres of water that leaks from the current infrastructure.</p> <p>As residents of Emsworth we currently enjoy the supply of natural spring water from the aquifers beneath the South Downs. To contaminate this water with recycled effluent is an unappetizing prospect, this is a retrograde step we are one we strongly resist.</p> <p>The normal process of consultation has not been followed properly. If it had been you would have been drawing the public along with the proposal and modifying it in line with comments received. You have not done this and therefore have breached your trust with the public and you customers.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |
| WRMP955   | <p>Dear Sir</p> <p>My husband and I would like to strongly object to the Southern Water proposal to clean recycled effluent which is then turned into drinking water. There are a number of reasons and these are also personal as we live on the Sea Front at Hayling Island and have been continuously disgusted by Southern Waters constant release of effluent into the sea at [REDACTED] [REDACTED]. To use [REDACTED] [REDACTED] to turn wastewater into drinking water is preposterous considering the management of the site over the last 10 years. The cost to consider this, will again fall on the consumers. It is substantial and would not necessarily improve the need to release effluent into the sea.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>Only recently we were assured that the site at [REDACTED] was being increased to manage the site better. Is this now being subsumed into the plan or disregarded altogether? Southern Water should be finding ways to capture the rainfall and to make sure it is stored efficiently. There would then be no requirement to recycle effluent to drink.</p> <p>We, as residents of Hayling Island, are not happy that our drinking water may be provided as a result of wastewater being turned into drinking water. I have only just found this consultation and given further time would have produced a detailed opposition to the proposal. I am sure there are many more residents that have not been able to respond.</p> <p>We would be grateful for a response on the scheme and hope that the decision will be to strongly reject the proposal. We would like to ask that you consider the decision as if you lived in the area that will be affected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP956   | <p>I have many concerns about the proposal to recycle water and add it to the new reservoir currently being built at The Thicket in Havant. I am a resident living in the East Hampshire area of Havant &amp; Waterlooville. When the proposal for the reservoir was set out initially it seemed to be a brilliant idea and we were sold a wonderful vision of a spring filled water facility with great attention to the preservation of wildlife and habitats by Portsmouth Water, it looked good - then Southern Water crept in on the bandwagon and everything changed. I don't trust SW one inch, they make little effort as far as I can see to conserve water and this idea of recycled water, if granted will in my view give them carte blanche to carry on regardless - they won't have to make efforts to conserve it they can just use recycled water!</p> <p>The water in this area is special and tastes like no other water and I personally don't wish that to change. I am concerned that people will not trust their water and buy bottled water with all the environmental issues that that entails</p> <p>We do get a lot of rain in this area , but there are no efforts to store it which could begin with a very simple and fairly cheap partial solution of giving each household a water butt in which rainwater can be stored for thigs such as watering gardens, more efforts to conserve the water that falls here are needed overall.</p> <p>Langstone Harbour is a site of special scientific interest and the proposed recycling plant in the area would jeopardise this. I am concerned that the release of reject water into the Solent will be even more concentrated than the sewage which has been being released in recent years, this will surely have an adverse effect on the water quality and wildlife, people have reported falling ill after swimming and surfing in the area, this will not get any better if more dangerous discharges are allowed. NO discharges should be made into the Solent in my opinion.</p> <p>I understand that this solution is not even cost effective (who'd believe that SW was going for something that's very expensive!) and from what I understand effluent recycling plants will be redundant in 60yrs. Doesn't seem to me to be a very prudent use of our money!</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir. A Water Recycling Plant would be typically expected to last 60 plus years but have a number of upgrades every 10–20 years of the electrical and mechanical plant.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response |           | <p>Southern Water lose 100 litres of water EVERY DAY to leaks! Perhaps they need to fix the leaks instead of chasing incredibly expensive ideas like recycled effluent?</p> <p>This is my response as a concerned resident.</p> <p>Yours sincerely</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP957   | <p>Dear Sirs,</p> <p>Only yesterday I became aware of this revised proposal and I am appalled. There has been no publicity about this proposal to consumers in the area particularly Portsmouth Water consumers who will be adversely affected and should be properly consulted.</p> <p>I had heard about Southern Water's original proposal to hijack Portsmouth Water's new spring water reservoir at Havant thicket and pump recycled water into it and understood the proposal had failed local planning permission on grounds of a raft of public objections to the potential contamination of this natural spring water facility and that the original planning permission for construction of the reservoir was on environmental habitat grounds was granted only for filling from natural water supplies of which there are plenty.</p> <p>This proposal to build a new type of treatment works to recycle effluent to potable water, but compositionally different, from spring water and store it in this reservoir for onward pumping to [REDACTED] area ( 30+miles away) is ridiculous and will reduce the quality and taste of the water supplied in the area to Portsmouth Water consumers and permanently change the water environment in the reservoir.</p> <p>( I am not in a position to comment on the suitability of other proposed sites for building such facilities in the Solent area but I do not believe these involve storage in spring water reservoirs.)</p> <p>This new type of water recycling facility is proposed to be built on reclaimed landfill site on the edge of the harbour. Just the building of this facility with the need to pile drive and dig to put in underground pipework will risk extended methane leakage and pollution leakage into the harbour environment. Any failure or leakages would pollute this fragile environment., which is currently clean enough to restore the oyster beds. The risks are too high. Especially as Southern Waters record of pollution leakages and dumping is already high and casts serious doubts of their ability to manage such a facility. Also the complexities of using such a location are likely to throw up issues which will delay the build and make it unlikely to come on line in the proposed time frame. A further issue is what is proposed to happen to the waste product which does not pass the filters into the potable side. Will it need further treatment at the sewage farm? Will it be clean enough to pump out into the harbour where excessive effluent discharges are already causing problems? Will it be pumped out via the Eastney outfall into the Solent? Either solution risks more untreated effluent discharges which are already at illegal levels and cause failures in bathing water standards as well as potential contamination of oyster beds.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>I understand this facility is suggested as a drought supply management. However I understand it will need to be run 24hours a day every day to maintain the cleanliness of the pipework and filters (except of course when cleaning and changing the filters). I understand running such facilities are expensive high energy users, not ideal at a time when we are trying to minimise or reduce energy usage. Especially for a facility with a projected shelf life of only 60 years. This is an expensive solution which seems to be designed for a different problem than the one which exists. The money could be better spent on long term sustainable solutions.</p> <p>There does not seem to have been any realistic assessment of more environmentally sustainable and cheaper alternatives which also could have a longer shelf life. Just accelerating their current slow proposals for reduction in leakages (currently at around 19%) bearing in mind consumers would be paying for expensive potable water production for it only to leak away, would be a sustainable start. As well as looking at more reservoirs or aquifer storage of existing rainfall preferably near where the water will be needed, to supply their customers (i.e not contaminating Portsmouth Water customers water supplies). Water extraction near where rivers meet the sea rather than upstream would also seem to be sustainable and help sustain the fragile chalk stream environment.</p> <p>I also understand a new western water "grid" is under construction and when it comes on line will relieve some of the water issues in the western Southern Water supply area. This does not seem to have been sufficiently taken into consideration.</p> <p>If I had more time I am sure I could have come up with a more coherently argued objection. I hope others have had more time to do this.</p> | <p>water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Regarding concerns about the discharge of waste from the proposed water recycling plants, the scheme will include monitoring equipment to assess the quality of any discharges. As with all discharges, the Environment Agency will determine the permits. These permits will help protect the environment and the Environment Agency will monitor compliance of all discharges.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on</p> |

We will be exploring them further for our next plan.</p> <p>We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP960   | <p>I have major concerns thr proposals for the following reason</p> <p>I do not trust southern waters management of our water supplies and thir environmental approaches.</p> <p>They cannot be trusted to stop spillages and leaks that impact on the environment so I have no trust in them to recycle water safety. On their current performance we are headed for a major health risk if they are allowed to recycle water with the same lapse approach.</p> <p>They need to tidy up their act by improving their current record before using other options to cover their failings.</p> <p>They need to exhaust other alternatives to water shortages like capturing more of the rain water than they currently do before subjecting us to recycled water and their other draft plans</p> <p>They need to become a company that can be trusted to meet their responsibilities and accept their failings, implementation and achievable action plan for improvement and stick to.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>We note your objection to the use of recycled water in Havant Thicket. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Although, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates.</p> |
| WRMP961   | <p>I am writing to voice my objection to Southern Water's Water Resources Management Plan specifically the Recycling Plant and effluent water into the Havant Thicket Reservoir.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>I feel that this has been put forward as the best plan for Southern Water and its profits, not for the environment, public health or financial situation of customers.</p> <p>Defra must reject the plan and require Southern Water to develop a more sustainable plan that works with climate change &amp; which puts the environment before profit.</p> <p>I also understand that this has been put forward direct to the Secretary of State and not through Local Planning Authority, so again Southern Water can profit on the construction and running of this plan, so as to increase the profits of Southern Water without consideration of the aforementioned affected outcomes. There are no alternatives suggested in their plan and any other options have not been investigated fully to give an open minded and transparent assessment of the best path forward.</p> <p>The persons in charge of Southern Water are some of the same that were in charge of the now financially ruined Thames Water, which should initially ring alarm bells with anyone reading the plan as to their intentions, integrity and goals for the future – their profits and shareholders.</p> <p>The information missing from this plan is astonishing and it is very narrow minded of your approach to just accept the information you have been given – more varied and statistically correct reporting (rather than vague percentages on usage and weather), alternatives for the Recycling Effluent Plant, the environmental, financial and public health impact for years to come.</p> <p>I am astounded that you are failing to see or even bother to accept that this does not need a more thorough and deep investigation. Surely this plan should produce more questions than answers, does it not make you think as to what they have omitted to bring to your attention and why?</p> <p>I was made aware of this plan and have made it my business to find out more information and its alternatives. I have also heard information from people more well informed, on the ecological impacts this plan will bring and the investigations that should be done, into alternative solutions and their impact. I think you should have this approach, so as to make a more open minded decision and be transparent.</p> <p>This decision should not be taken lightly as it will affect the whole country, future plans from other water authorities will flood in if this is whisked through without deeper investigation and questions asked.</p> <p>I think you need to pause, take a step back and obtain information on costs and impacts of alternative solutions to this problem, including environmental and financial impacts for the south. Also why have Southern Water left these out? More importantly ask yourself, if you would drink from the tap after this was done in your area?</p> <p>There are many more questions to be asked and investigated before you pass this plan. Please ensure you have all of the information on all solutions before a final decision is made, it will</p> | <p>Southern Water has planned to build the Effluent Recycling Plant on landfill and risks are unacceptably high. If despite all of the concerns about whether effluent recycling is needed, the significant environmental impacts, enormous costs to build &amp; operate are to be ignored, they must be told to find an alternative site for the recycling plant at Havant. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>have ramifications for years to come on many, many people, their surrounding environment and their health. Think carefully about your choices and ask if they have been well informed and transparent.</p> <p>To assist I have made a list of concerns/omissions on Southern Water Plan:</p> <ul style="list-style-type: none"> <li>· Southern Water has a plan that is not planning for the future and the environment. By planning a £1.2 billion scheme to recycle treated waste water into Havant Thicket Reservoir, along with 3 other recycling schemes, Southern Water are taking us down the wrong path. We need a plan that focuses on developing more sustainable solutions first, that work with climate change, to collect the forecast increase in winter rainfall and store it in new reservoirs and confined aquifers for use in dry summers. We get plenty of free rain but only collect 1% of rainfall in the UK. Collecting and storing more water in winter would also provide multiple benefits to society, helping to reduce the forecast increase in flooding, provide recreational sites for our communities, and provide biodiversity opportunities if we build more reservoirs.</li> <li>· Southern Water must have a programme of action to reduce leakage. 3% of water Southern Water take from the environment is lost before it even reaches the treatment works, then a further 19% of water that customers have paid to treat, is currently lost to leakage in the distribution network. That is more than 100 million litres of precious water lost every day. Southern Water must be required to deliver a much faster programme of renewing water mains to replace their ageing pipe network, or they will never get leakage under control. Having a replacement rate of just 1 in 1000 years when a water main is only designed to last 120 years is just unacceptable.</li> <li>· Southern Water cannot be trusted to operate their current obligations without causing pollution and investment. How can we trust Southern Water with the complex technology required to treat final sewage effluent, which has not been used for this purpose before in the UK? Southern Water have a very poor track record of treatment plant and pumping station failures, many prosecutions for pollution incidents and failure to take prompt action to rectify problems. The risk of pollution to the Havant Thicket Reservoir as well as damage to Langstone Harbour and the Solent is unacceptable. Also this will cause the public to switch to bottled water for drinking, therefore increasing single use plastic consumption and pollution.</li> <li>· Southern Water need to do more to protect the environment and keep their promise of Carbon Neutral by 2030. Our river catchments could be protected quickly if they moved river abstractions closer to the tidal limit, abstraction boreholes down the catchment. This would reduce the priority for abstraction reform, which is driving the need for effluent recycling. Storage options need to be developed closer to where the water is needed, so that long pipelines that damage our countryside and wildlife are not required. Options need to be developed that do not have such a high carbon and emissions footprint. We need a strategy that prioritises low energy solutions, the energy alone for the Hampshire scheme will cost more than £3 million/year. With pumping and treatment needed 365 days a year, even though effluent recycling was selected as a drought resource, this will financially be passed to customers. In a</li> </ul> | <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15Ml/d to 60Ml/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10Ml/d to 40Ml/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>time of climate emergency how can you select the schemes with the highest carbon footprint and emissions?</p> <p>Examples :</p> <p>The Hampshire and Littlehampton effluent recycling schemes have the highest negative environmental impact score of any of the options considered.</p> <p>The effluent recycling schemes to be developed by 2035 each have a higher carbon impact than the transfer of water from Norway by sea tankers.</p> <ul style="list-style-type: none"> <li>· Southern Water has planned to build the Effluent Recycling Plant on landfill and risks are unacceptably high. If despite all of the concerns about whether effluent recycling is needed, the significant environmental impacts, enormous costs to build &amp; operate are to be ignored, they must be told to find an alternative site for the recycling plant at Havant. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great.</li> </ul> <p>Other points to bring to your attention are as follows</p> <ul style="list-style-type: none"> <li>· Defra need to change the water industry funding mechanism to stop incentivising infrastructure heavy solutions, but instead encourage development of sustainable solutions that work with climate change.</li> <li>· There has been inadequate publicity and consultation about Southern Water's plan. They did not ensure all of their customers were informed of plan and consultation. They should have written to all Southern Water &amp; Portsmouth Customers across the region that will be impacted by this major change to their water supply.</li> <li>· The level of detail contained within the 32 volumes of publicly available information, provided by Southern Water is hard to digest without the significant investment in time which many readers are unable to spare. The action withholding 12 volumes from public view does not help, as that is where the useful detail on options and environmental assessments is to be found. Therefore, Southern Water have made it difficult for customers to investigate and make an informed decision.</li> <li>· The huge cost of servicing the massive debt created by the selection of such an expensive option will also have to be paid for by customers.</li> <li>· Research shows that customers prefer more natural &amp; sustainable solutions such as reservoirs and aquifer storage, but Southern Water have not listened.</li> <li>· The Hampshire effluent recycling scheme alone will deliver a profit of about £45 million pounds to Southern Water, this kind of profiteering paid for by customers is not acceptable.</li> </ul> | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Regarding funding mechanisms, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> |

|           | I could go on and do have more information I have obtained, should you wish to discuss in more detail. I hope you will give my objection due consideration and have read and understood my points clearly and fully.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Sea tankering from Norway is no longer included in our plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| WRMP962   | <p>As someone who lives very close to the proposed reservoir I am very concerned about the plans for this new reservoir. The original plans seemed to be fairly reasonable and were therefore granted planning permission. Now, the plans have been totally changed to include many alarming aspects.</p> <p>Apparently the construction is to be very 'carbon heavy' and therefore irreversibly damaging to the environment. It will be incredibly expensive. I certainly don't relish drinking recycled effluent as opposed to fresh drinking water from the many springs and aquifers in this area. I am also worried about unpleasant or chemical smells resulting from this new scheme.</p> <p>I understand that the new proposal is quite unnecessary and there are several alternatives, each of which would be less costly, less harmful and quicker to implement.</p> <p>I do hope you will take note of all our concerns about this scheme.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP963   | <p>I wish to object most strongly to the proposed Southern Water water resources plan which is currently being advocated by Southern Water, especially the use of recycling effluent from the [REDACTED] Treatment Centre to the newly created Havant Thicket Reservoir.</p> <p>I understand this is being planned in part to reduce abstraction from two rivers, the Test and Itchen to satisfy the water needs of Southampton and surrounding areas. This could easily be rectified by changing the abstraction sites on both rivers to much nearer the coast. No extensive, costly pipelines and associated works required. Simple.</p> <p>I am also concerned that the recycled effluent will be mixed with virgin springwater supplying the water in the new reservoir at Havant Thicket from the natural springs nearby. The reservoir was initially created to ensure pure water for Portsmouth and its surrounds for future years. Portsmouth Water used to be proud of their record of providing excellent pure water. The impact of mixing pure spring with this treated effluent water is unknown, untested. That is very scary.</p> <p>What is known is that Southern Water has a leakage rate of 19%, polluting rivers and the coast. They often discharge raw sewage into Langstone Harbour and surrounds. How can we trust SW to deliver successfully treated effluent when they have obvious disregard to polluting our rivers and coasts?</p> <p>I entreat you to examine the sustainable alternatives to this plan proposed by many learned experts than myself.</p> <p>Southern Water cannot keep putting profit over water quality, which is such a precious resource. Effluent recycling is not the answer. Please listen to us ordinary people. Thank you DEFRA.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP965   | <p>Dear Sir</p> <p>I wish to strongly reject Southern Water's leaky recycling plan for local drinking water.</p> <p>Southern Water needs to develop a more sustainable plan that puts local people and the environment before profit.</p> <p>Only 1% of rain water is collected - this needs to change. We need to collect more rainwater rather than recycle affluent water.</p> <p>19% of water is lost due to leaking pipes - disgraceful. Again Southern Water needs to use there profit to reinvest in their pipework rather than paying out huge dividends.</p> <p>Southern Water passed performance has been criminal and I can't believe that they can be trusted not to cut corners when treating affluent water. The alway put profit first before looking after us and the environment.</p> <p>The carbon footprint of these solutions are extremely poor</p> <p>I'm not convinced Southern Water knows about this plan.</p> <p>Please reject this plan.</p> <p>Kind regards</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                       |
| WRMP966   | <p>I object to this plan as it will be very detrimental to Havant and the surrounding area in terms of the impact on the environment.</p> <p>Southern Water's performance has been abysmal for years and therefore how can anyone have any confidence in their ability to deliver this plan successfully.</p> <p>As a result there is a significant risk that delivery of the plan will make the problem of sewage discharge worse.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>We note the objection to the use of recycled water in Havant Thicket. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> |
| WRMP967   | <p>I believe that this plan should be rejected due to Southern Waters poor record in regard to its current network and control of sewage outages into the Solent .</p> <p>Also I do not agree with using recycled waste water in our water supply especially as this would be the first process of its type in the UK .</p>                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP968   | <p>Team,</p> <p>I am writing to urge you to prevent Southern Water developing an environmentally unsustainable plan for generating fresh water from effluent. If we lived in a drought prone country then this may be appropriate but for the UK this is an extremely expensive and environmentally destructive solution. Southern Water has done nothing to build trust with the local or wider community and so we are distrustful of the project and it being successful in its objectives.</p> <p>I object specifically as follows</p> <ol style="list-style-type: none"> <li>1) the huge energy costs and carbon footprint involved in construction and working of the plant.</li> <li>2) destruction of an open site adjacent to a highly protected SSRI.</li> <li>3) negative impact on the visual environment at Broadmarsh.</li> <li>4) the input of recycled effluent water into the Havant thicket reservoir compromises biodiversity and undermines the arguments made for the “clean” spring fed reservoir in the initial planning consent.</li> <li>5) plenty of other alternatives are available and these are likely to be greener and less expensive e.g. a focus on abstracting further downstream and reducing current massive leakage (100 million litres/day).</li> <li>6) the plan will fuel the use of bottled water due to mis-trust in recycled effluent.</li> <li>7) inadequate public consultation with very limited awareness of the impact on the local communities who will be most affected.</li> <li>8) the plan does nothing to reduce raw sewage discharge into Langstone Harbour and diverts the companies focus away from what should be it's number one priority</li> <li>9) discharge implications of concentrated effluent into the Solent</li> <li>10) the danger of landfill leachate contamination of Langstone Harbour caused by mechanical boring through former landfill - only a very limited survey has so far been conducted.</li> </ol> <p>In summary, on a rain drenched island there must be more environmentally friendly solutions available to save our chalk streams. This scheme represents the worst of all worlds.</p> <p>Sincerely</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. Our supply area is classed as being under ‘serious water stress’ by the Environment Agency. Please see <a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a><br/>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</li> <li>2. As the environmental regulators of the water industry, the Environment Agency and Natural England have provided detailed comments regarding the Environmental Assessments for the WRMP. Work is being undertaken by our consultants WSP to address these comments and make any necessary changes to ensure that the assessments align with regulatory requirements.</li> <li>3. Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</li> <li>4. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</li> <li>5. We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</li> </ol> |

|           |                 | <p>6. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>7. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.<br/>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October–November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35–40 minutes with the remaining time allocated to Q&amp;A.<br/>We released a press release regarding the consultation, which was picked up by major newspapers; <i>The Guardian</i> and the <i>Financial Times</i>. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.<br/>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>8. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>9. A further consultation on water quality was held in March–April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>10. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |
| WRMP969   | Dear Sir/Madam. | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>I wish you to register my objection to your plans to use the Havant Thicket Reservoir for recycling effluent rather than collecting raw water only. I live in Emsworth next to the River Ems and I have seen the results of over extraction of the ground waters so I recognise the need for additional raw water sources. To effectively hijack the HTR for a purpose for which no planning permission was received is both illegal and arrogant and will leave residents with a water source which will be recycled effluent.</p> <p>If you apply for revised planning permission in order to change the use of HTR from the intended use to a holding reservoir of effluent then you will not be thanked by the tax payer who has partly funded this new reservoir and the residents of Hampshire and West Sussex.</p> <p>Additionally you will have to cope with the likely objections to the High Court which will follow.</p> <p>Regards</p> | <p>Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP970   | I do not wish to drink recycled sewage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP971   | <p>As is the case with Thames Water and others, the lack of proper investment in repairing existing infrastructure undermines any case for so-called improvement schemes such as this. Make the best of the existing infrastructure before considering plans for expansion.</p> <p>Additionally, carbon management issues should really receive higher priority than seems to be case here.</p> <p>Best,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term</p> |

The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP972   | <p>Dear Sirs</p> <p>I am deeply saddened to discover Southern Water's latest plan.</p> <p>The proposal from the firm to operate a very complex, costly effluent recycling scheme is farcical.</p> <p>It has to date been unable to operate conventional treatment plants and pumping stations without causing severe pollution, leading to numerous prosecutions for these failures and still not taken sufficient action to remedy them.</p> <p>It now plans to construct an effluent recycling plant on a contaminated landfill site adjacent to Langstone Harbour. I understand this will need large tunnel shafts and hundreds of piles reaching down to the chalk aquifer below. The risk of pollution into Langstone Harbour appears to be far greater than the existing simpler treatment plants, which already are allowed by Southern Water to badly pollute this harbour.</p> <p>The prospect of allowing Southern Water to make large profits from building the infrastructure for this project is inconceivable, especially when the cost is already projected to be well over a billion pounds and when they have been previously fined for significant failings in their existing comparatively straightforward treatment plants.</p> <p>We will obviously have far greater needs for drinking water in the future. However before embarking on this financially and environmentally costly plan, perhaps simpler, but potentially more effective plans should be considered.</p> <p>Climate change is producing more, not less rain. It needs to be captured, but at present only 1% of rainfall is collected. However at present 3% of water captured by Southern Water is lost before treatment. A further staggering 19% of the costly treated water is currently lost before it reaches a customer due to leakage. This equates to one hundred million litres a day lost.</p> <p>A fraction of the projected new Southern Water recycling plan cost would go a very long way to improve the ageing pipe network and distribute the valuable water to the consumer. All the while</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This</p> |

|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>reducing the massive environmental damage caused by the projected 40 kilometres of pipework, numerous pumping stations plus the already mentioned recycling plants, together with the daily energy used in pumping large quantities of water over large distances.</p> <p>I implore you to throw out this ill conceived plan and force Southern Water to develop a more sustainable plan which for once puts people before profit.</p> <p>Yours sincerely</p> | <p>would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> |
| WRMP973   | <p>Dear Sir/Madam</p> <p>Although the science of effluent recycling may be sound Southern Water simply cannot be trusted to execute it responsibly. With Southern Water's poor track record of treatment plant and pumping station failures, prosecutions for pollution incidents and failure to take prompt action to</p>                                                                                                                                       | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>rectify problems, how can we trust Southern Water to operate and maintain this complex advanced treatment process?</p> <p>This plan is even more environmentally damaging than Southern Water's existing habit of pumping raw sewage into the coast. The reject water from the effluent recycling plant discharged into the Solent will be 4 times more concentrated than the existing sewage effluent discharged. A Southern Water report confirmed it will likely have a significant effect.</p> <p>The Broadmarsh site is utterly unsuited to development. Significant risk to Langstone Harbour of developing the effluent recycling plant and deep tunnel shafts needed on the contaminated landfill site at Broadmarsh (Site 72). There are alternative safer and more suitable sites for the plant which avoid unacceptable environmental risk to the harbour.</p> <p>Of all the plans put forward to ensure that Southern Water customers have a supply of clean water recycling centre is more costly, and less reliable than other plans that were considered. It appears that the plan is put forward only so that Southern Water can borrow money, get customers to pay for the loan, and extract the cash injection for shareholders. This is unsustainable and completely dishonest. This must not be permitted.</p> <p>Thanks</p> | <p>why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> |
| WRMP974   | I object to your plan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We thank you for your engagement and feedback with our rdWRMP24 consultation. | WRMP975   | <p>I wish to make my objection to SW's plan to pump treated waste water into the Havant Thicket reservoir.</p> <p>The company has shown a total disrespect for our environment and this plan is yet another attempt to plaster over the cracks of years of under investment and bad management with a plan that suits them but not the customers and environment they serve.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> |
| WRMP976   | <p>We are very concerned to read that Southern Water are planning to build a sewage water treatment plant at Bedhampton that will produce 'drinking quality' water to be pumped into the new Havant Thicket reservoir and mixed with fresh water collected by Portsmouth Water Company. As Portsmouth Water customers this mixture will be piped to our home which until now has always been provided with fresh spring water. I was under the impression that planning permission for the reservoir required it to be filled from spring water.</p> <p>Given Southern Water's abysmal record of repeated illegal sewage contamination of Chichester Harbour, how can we trust them to maintain the purity of their output from this plant? We understand that the proposed treatment process is new to the UK and as such must be considered risky.</p> <p>A further objection is the high energy requirement of the plant at a time when the world needs to reduce reliance on, and consumption of fossil fuels.</p> <p>We would much rather see the money needed for this expensive project going instead towards water infrastructure maintenance and replacement to reduce the shocking waste of water that occurs because of leaks.</p> <p>We were not aware of the proposal by Southern Water until a few days ago and find it very suspicious that they have not informed the people that would be affected by the change in water quality.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p>                                                                                                                                                                                                  |

|           | We strongly object to this scheme and call on DEFRA to refuse permission.                                                                                                                                                                                                                                                                                                                                                                       | <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October–November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35–40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; <i>The Guardian</i> and the <i>Financial Times</i>. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP977   | <p>Dear DEFRA.</p> <p>To save you reading more or less the same objections may I say I completely agree with and endorse the comments of Me Dave Childs of Havant Thicket Nature Campaign.</p> <p>For all the reasons he states I am equally opposed to this plan.</p> <p>I request that Southern Water fix their leaks, stop suggesting this is a great idea and adopt a less harmful plan of smaller reservoirs.</p> <p>Yours faithfully,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| WRMP978   | <p>I am writing to express my concerns in relation to your plans to put treated water into Havant thicket reservoir. This scheme is short sighted and not a sustainable solution. Surely it would make much more sense for this reservoir to be collecting fresh rainwater. Currently we only collect 1% if rainwater in the UK.</p> <p>I am very concerned about the southern waters ability to protect our waters from sewage pollution and envisage this week be made much worse by these plans.</p> <p>Southern water need to be much more ambitious if they are to honor their commitment to be carbon neutral by 2030.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net</p> |

| WRMP979   | <p>Dear Secretary of State (Defra),<br/>I am writing to strongly object to Southern Waters plans to recycle waste water into Havant Thicket Reservoir.</p> <p>The proposed investment could be much better spent on alternative water infrastructure, such as reducing leaks and increasing rainwater collection and storage.</p> <p>Southern Water's mismanagement of the infrastructure that we all rely on is already a significant cause of distress for me and my family. I grew up on Hayling Island and spent much of my time in, on and around the water. Never did I have to worry about sewage pollution in our seas. After a short time in London, my wife and I returned to start our family in our home in Emsworth. We now find that our young children are unable to enjoy the sea due to Southern Water's inability to manage storm water overflows, resulting in raw sewage being regularly pumped into the sea around Chichester and Langstone Harbour.</p> <p>The idea of allowing Southern Water to potentially mismanage the recycling of that same sewage into our drinking water supply, with this absurd project, is totally unthinkable and unforgivable for me and for the future of my children.</p> <p>Please refuse these proposals and enforce a solution to our future drinking and waste water concerns that solves the real underlying issues in a sustainable way, a taking better advantage of the options at our disposal.</p> <p>Best regards,</p> | <p>Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Thank you for reviewing our rdWRMP24 and providing feedback. We note the objection to the use of recycled water in Havant Thicket.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |
| WRMP980   | <p>TO WHOM IT MAY CONCERN</p> <p>I write to object to Southern Water's proposal to mix recycled sewage with drinking water in the new Havant Thicket Reservoir.</p> <p>It is incumbent on the Water Company to find an environmentally sustainable and cheaper way of providing the local community with pure drinking water – or, if selling it elsewhere, the community/ies elsewhere.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>The heaps of human waste which are spread over arable land are already a health hazard, given that most of the population is taking chemical medication of one sort or another, e.g. contraceptive pills, heart disease pills, etc. etc. Organic foodstuffs are thought to be free of chemical contamination, and are increasingly bought. Human sewage however “purified” must be kept out of our drinking water.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP981   | <p>Dear Sir/Madam</p> <p>I would like to object most strongly to this Water Resources Management plan.</p> <p>I do not agree with Southern Water's proposal to add their recycled sewage to what would be naturally clean water in the new Havant Thicket reservoir; I do not consider the resulting product would be fit for purpose.</p> <p>I am a regular sea swimmer at Eastney beach, overlooking The Solent near their [REDACTED] sewage works. Last March, despite carefully checking their supposedly up-to-date app informing us of recent discharges, I was a victim of their misinformation and caught a serious bacterial infection from sewage-infested seawater, resulting in my hospitalisation and being treated for cellulitis and sepsis and suspected hepatitis.</p> <p>I feel that if Southern Water cannot be trusted to conduct their sewage treatment operations and notations safely, I do not want them to have any input regarding the cleanliness of my drinking water. This is at present supplied to my taps perfectly cleanly by Portsmouth Water!</p> <p>I also wonder how long it would be before the first 'technical issue' gives them the excuse to dump untreated water into Havant Thicket reservoir!</p> <p>Yours faithfully,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> |
| WRMP982   | <p>I wholeheartedly reject the idea of managing the water in this way. Already our local waters have an unacceptable amount of waste in them, accidental I do not believe for one second.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>Our regulators the EA, NE and Ofwat are independent from Southern Water and they undertake an analysis of our plan. |           | <p>I absolutely insist that we have fresh water in this new resource. There have been many studies to prove that these plans are not fit for purpose and similar facilities around the world have failed in the implication of the same.</p> <p>The profits from services we have already paid for surely allows for us to have the water we deserve.</p>                                                                                                                                                     | <p>options and risks. Our SoR shows the feedback we received from these regulators and how we have responded to it.</p> <p>The options and risks are assessed independently by RAPID through the Gated Process, and by Defra through the WRMP process.</p> <p>We thank you for your engagement and feedback with our rdWRMP24 consultation. Your comment has been noted. Our website will contain the development of our WRMP24 and, going forward, our WRMP29.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p>                                                                                                                                                                           |
| WRMP983   | <p>Dear sirs,</p> <p>I wrote with concern about your current draft plan. Please can you advise why priority is not being made to capturing rain water and minimising leakage throughout your network, both of which would ensure sufficient natural water to be provided within your network, rather than effluent recycling, which appears to be the easy way out, whilst providing minimal quality to your customers.</p> <p>I hope that you will revise your draft plan further in light of the above.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We note your point on rainwater storage and our plan does include constructing two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It is worth nothing that reservoirs do require a unique set of geological, geomorphological and hydrological settings to be viable.</p> <p>Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire and to create a sustainable source of supply. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement</p> |

We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We thank you for your engagement and feedback with our rdWRMP24 consultation. Your comment has been noted. Our website will contain the development of our WRMP24 and, going forward, our WRMP29.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| WRMP984   | <p>Dear DEFRA,</p> <p>I have significant concerns regarding southern waters (sw) plans and ask in the strongest possible way that permission is not granted for them in there current form.</p> <p>Sw plans are not ambitious enough and I believe carry a high risk of failure.</p> <p>SW are not repairing water leaks fast enough</p> <p>SW current plan is not environmentally friendly and will produce significant waste whilst failing to harness rain fall.</p> <p>Please reject SW plans and ensure an ambitious environmental sustainable plan is agreed in its plan.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>As a major abstractor of water in the South East for public supply, and with responsibility for the conveyance of wastewater from homes and businesses for treatment before it is returned to rivers or sea, Southern Water plays a critical role in carrying out these duties whilst protecting and enhancing the environment. Further information and reports on how we achieve this can be found on our website</p> <p><a href="https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/">https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/</a></p> |
