|           | <p>The UK only collects about 1% of rainwater so the solution is not in RECYCLING dirty water from the [REDACTED] Waste Water Treatment Works (WWTW) to pump it to Havant Thicket reservoir (or any other). The solution is to IMPROVE storm water capture and storage across the region AND/OR abstract water further downstream closer to estuaries where greater volumes (especially after floods), can be captured.</p> <p>Broadmarsh is a former waste tip with huge risks to groundwater contamination during construction works, directly impacting on the Habitat "Protected", Langstone Harbour and would be the WRONG location anyway.</p> <p>SW's own Preliminary Environmental Information Report confirms there is a likely significant effect resulting from discharge of the concentrated reject water on the Solent "Protected" sites.</p> <p>ISSUE 2</p> <p>PW had applied for, and were granted approval (15/10/21) for a Reservoir to store pumped Spring Water from Bedhampton Springs to Havant Thicket as a Drought Response. PW is only under "moderate" stress from drought. In Winter it currently returns far more than needed (according to PW's Consultation in 2020). It will have a minimum storage capacity of 8,700 million litres (ML), and capture rainwater. The pumping from the Springs will only be required in extreme (currently defined as 1:200 year) drought conditions at a rate of at least 21ML/d.</p> <p>SW is not constructing an ERP for PW customers. The Havant Thicket approval was not therefore granted to take recycled effluent. The fundamental purpose of the original application for a reservoir for raw water storage has significantly changed. Effectively, SW is attempting to subvert full public engagement by using Havant Thicket for another purpose.</p> <p>According to SW in their July and August 2022 initial consultation on the re-cycling of "dirty" into "treated" water pumped to Havant Thicket, they had PW's approval. That's NOT how PW Consulted with us in 2020.</p> <p>PW is NOT intending to monitor water quality in their new Reservoir but instead rely on SW. Water Quality needs INDEPENDENT monitoring.</p> <p>ISSUE 3</p> <p>The UK has committed itself to Net Zero Carbon Emissions in 2050. The SW Broadmarsh ERP is on the coast approx 10 -15m above mean sea level. Havant Thicket is over 40m above. Constantly supplying and pumping 365 days/annum even when it's not needed is hugely energy demanding and entirely wasteful.</p> <p>SW is also intending to pump treated effluent up 90m to Portsdown Hill to gravity feed therefrom to a Water Treatment Works OVER 40km at [REDACTED] increasing energy demand even higher.</p> <p>The stated aims of the UK Gov't are to "build on our ambitions set out in the British Energy Security Strategy and the Net Zero Strategy for increasing the overall share of domestic energy production and reducing ENERGY DEMAND":-</p> <p><a href="https://assets.publishing.service.gov.uk/media/642708eafbe620000f17daa2/powering-up-britain-energy-security-plan.pdf">https://assets.publishing.service.gov.uk/media/642708eafbe620000f17daa2/powering-up-britain-energy-security-plan.pdf</a></p> | <p>number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) on in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>ISSUE 4</p> <p>The financial burden to SW consumers of a new ERP at Broadmarsh and pipes to Havant Thicket Reservoir is now £1.2 to 1.4 billion (excluding the "Thicket" Reservoir construction costs) or £30/annum per customer.</p> <p>Three Winter storage reservoirs could be built for the Broadmarsh ERP (the estimated cost for the construction of the Havant Thicket Reservoir is £350 million).</p> <p>The [REDACTED] WTW meanwhile is not expected to be served by Broadmarsh until 2035/40 and in drought conditions could be expected to rely on Ocean Going Tankers from Norway. The drought of 1976 is almost 50 years ago but SW was privatised 35 years ago in 1989 and has a huge leakage rate of 19%. SW is a company that fails to plan ahead and fails to manage the infrastructure it already has.</p> <p>ISSUE 5</p> <p>SW's [REDACTED] WWTW persistently fails. It discharged raw sewage into the "Protected" Langstone Harbour for 181 hrs in the eight days between 24th October and 1st November 2024. This is NOT a new failure.</p> <p>SW is able to earn profits from investing in NEW infrastructure but not from maintaining pre-existing infrastructure.</p> <p>ISSUE 6</p> <p>Drinking water from the Havant Thicket will NOT have the same safety protection as the approved scheme will because SW's practice is unreliable and the natural PH balance and chemical structure is changed.</p> <p>Conclusion</p> <p>There is No Economic, Environmental, or Social Benefit in DEFRA authorising the grant of a Development Consent Order for Effluent Recycling Plant at Broadmarsh.</p> | <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP769   | <p>I am writing to ask you to reject Southern Waters plans to recycle sewage using the proposed reservoir in Havant Thicket.</p> <p>I have so many concerns about these proposals which were added after planning was accepted for the reservoir. The top concern for me is that Southern Waters do not seem to be able to manage their current infrastructure, with so much drinkable water just leaking out from holes and never reaching homes, and not able to deal with the amount of waste water. I am aware that water companies are allowed to just discharge untreated waste in times of high rainfall, but southern release water when it even drizzles, or rains lightly as a one off. They seem to be unable to deal with the slightest extra rain and all the while even more houses are being built.</p> <p>I think if they accepted this, and were honest about discharges, and were investing in their infrastructure to improve matters, then that would be something. Instead they are trying to be secretive about discharges and giving pay increases to their high level managers that are well above what they should be getting, particularly as they are not performing very well, in either their function or in improving confidence in their company.</p> <p>I have recently done some research into the water recycling system they are proposing, and it is fairly new in the UK. I can see the attraction, you can effectively make 80% drinkable and then only need to dispose of 20%. When I asked about what would happen to the extra concentrated wages, I believe the proposal is to discharge it using the long outfall, so just have free licence to discharge it continually without any treatment.</p> <p>I have also seen that the process is complex, and it is common that some of the filters block and need flushing out etc. I am extremely concerned that southern water will plow ahead doing the least possible to be able to continue to pay shareholders, and not really make sure that they plan contingencies to deal with this scenario. In short, this is complex and southern water have been clearly incompetent and untrustworthy in their current operations, so there is a huge concern. The risks of this proceeding are huge, because there is a big chance that the water in the reservoir will be compromised, if not with sewage, with other contaminants from the waste</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household</p> |

|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>water, and that our local harbours and beaches will continue to be contaminated with untreated waste.</p> <p>I think it would be much better if Defra were to work with southern water to invest in sustainable solutions that are tried and tested locally, such as using the reservoir to collect rainwater as originally planned, stopping the leakages in treated water, and improving current facilities to deal with waste water to allow the system to cope with more houses and a bit of rain! We are all so upset with Southern Water, as we feel we can't even swim in the sea in the summer anymore. I don't even attempt to visit the beach if it even rains a spot in the previous 48hours, and me and my family have all had bad stomachs after swimming even so.</p> <p>Please do investigate their current operations and speak with local groups such as surfers against sewage etc and please insist that they get their house in order before using us all as Guinea pigs for this complex technology.</p> | <p>and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. The plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination. Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |
| WRMP770   | <p>I am writing to express my objections to the Southern Water revised draft Water Resources Management Plan (WRMP) 2024, which includes using the Havant Thicket Reservoir as a holding place to store water recycled from effluent. I understand that the consultation process ends on December 4th, though it seems to be a shoddy attempt at consultation as it is not well advertised and so remains unknown to many interested parties who may have wished to give their view had they known. Also, accurate information on the project from Southern Water is difficult to find; this lack of communication and transparency is worrying. This is not the way to run an accountable consultation process and it engenders mistrust.</p>                                                                                                                                                                                                                                                                                   | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>The Southern Water 'Water Resources Management Plan' (WRMP) was rejected by DEFRA in 2023. I believe that the new iteration has not substantially changed, the same issues remain, so I'm not sure why we are reviewing it again. Other options were put forward for consideration by those concerned last time, ones which could provide more acceptable solutions to the problems of potential drought. However, these do not seem to have been seriously looked at by Southern Water. The initial proposal of a reservoir constructed to hold fresh water was accepted by DEFRA and the local communities a few years ago; I suggest that trying to change usage to an environmentally UNfriendly one which does not adhere to the needs of the people or the planet is sly and shows lack of respect to both expert and public opinion.</p> <p>The current plan being proposed is incredibly expensive, both financially and to the environment. The pumping and treatment that the Hampshire scheme would need would cost more than £3 million a year, with pumping (and therefore energy use and carbon emission) taking place constantly. This constitutes an enormous carbon footprint, and for what gain? It is proposed that the water is for use in case of times of drought – no one yet knows if there will actually be a summer water shortage, and if there is there has to be a more earth friendly way to ensure a better supply. At a time when climate change and protecting green spaces and diversity of species are in everyone's minds the plan presents an industrial solution to a potential problem without acknowledging or exploring the gains that could be made by more efficiently using what we already have. For example, in the UK only 1% of rainfall is collected. As rainfall in the winter months is forecast to increase surely attempts to harvest more of this would be advantageous and less costly. Also, I was shocked to learn that leakage from the Southern Water freshwater system is as high as 3% before it reaches treatment, and 19% in the distribution network (which has been treated and therefore constitutes a waste of energy and customers money). Investment in the infrastructure of this current system would provide immense gains in available water volume.</p> <p>Southern Water do not have a good record of maintaining their current infrastructure and pollution incidents where effluent has entered Hampshire coastal waters and rivers are already well documented. Their track record is such that I do not believe they can be relied upon to manage a highly complex sewage treatment process without considerable pollution risks detrimental to both humans and the environment. If there were difficulties at the recycling plant contaminated water would enter the reservoir thereby fouling the reservoir as a whole, and consumers would have valid worries about consuming the water. What the county does not need is mass purchasing of bottled water by residents wishing to safeguard their health. There are also concerns that the deep drilling necessary to construct the system would be on a totally unsuitable site. The Broadmarsh site is an old landfill site containing unknown materials, including toxic waste. The very real dangers of this leaching through the chalk and into Langstone Harbour, thereby damaging the ecosystem there, seem to have been ignored. This is unacceptable.</p> <p>In conclusion, the current Southern Water proposal has very un-green qualities that should be raising red flags all round, and they have paid no heed to recommendations made or views given. I reiterate:-</p> | <p>website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a><br/>"https://waterresources.southernwater.co.uk/find-out-more/"</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We have received 1176 responses as part of rdWRMP24 consultation. We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased</p> |

|           | <ul style="list-style-type: none"> <li>Southern Water has not been transparent in this consultation process, which rather misses the point of consultation</li> <li>The energy needs of the plan are way too high and cannot be countenanced when the overall need of the world is to reduce carbon emissions</li> <li>Southern Water have failed to explore more cost effective options which make better use of the water already available</li> <li>Southern Water are showing no respect to the environment in pursuit of this plan</li> <li>Southern Water appear to be ignoring the safety concerns of the public and knowledgeable experts</li> </ul> <p>I strongly urge DEFRA to both reject this proposal from Southern Water, and to insist that they look to more environmentally friendly solutions to any potential water shortage.</p> | <p>results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. The plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring</p> |
| WRMP772   | <p>I do not want for myself my children and grandchildren to be drinking water that is not spring water this is perfectly healthy and local.<br/>I'm not convinced that southern water can be trusted to treat effluent in drinking water supplies as they have a terrible record locally with maintenance ( complete lack of it ) .</p> <p>People's health should be the priority we are going backwards with regards to water treatments.</p> <p>Please do not allow this to go ahead.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP773   | <p>I object to Southern Water WRMP plan on the following grounds:</p> <ul style="list-style-type: none"> <li>• It does not work with Climate change but instead contributes to it.</li> <li>• The level of need is overestimated by high figures for population growth and exclusion of other potential water sources from the plan.</li> <li>• It ignores and parks more sustainable and longer-term solutions.</li> <li>• The options in the plan are the most expensive and the most environmentally damaging.</li> <li>• It ignores the pollution risk to the harbours, Havant Thicket reservoir and the countryside.</li> <li>• It has shelved the use of [REDACTED] as a site for Reverse Osmosis treatment plant.</li> <li>• It takes no account of the improvements to the Hampshire grid which enables water to be moved to area of high demand.</li> <li>• The Reverse osmosis recycling option delays protection of the iconic R. Test and Itchen until 2035 or later, whereas a twin track approach to include moving the abstraction and the Test MARS aquifer would give protection at an earlier date.</li> <li>• It is too slow to fix the level of leaks and replace mains.</li> <li>• It fails to include effective methods to reduce consumer demand by removing the threat of hosepipe bans, and tiered billing.</li> <li>• It increases the energy and electricity demands from the National grid (which the same company own) at a time when our own electricity generation is not meeting our needs and we are dependent on importing more of our electricity.</li> <li>• It fails to address the consumers' resistance to drinking water processed from sewage effluent recycling which has created a plastic bottle mountain in Singapore.</li> <li>• Southern Water have a poor record for managing the simpler and well established and understood technology and their ability to manage the much more complex technology of Reverse Osmosis and desalination is a concern.</li> <li>• There has been a lack of effort to inform the public about this consultation and a lack of transparency in the presentation of the plan.</li> <li>• Southern Water's owners are Macquaire Bank. This bank has a record of raising debt levels, poor regulation and systems and Southern Water's shares are already junk status.</li> </ul> <p>I do recognise that the climate change and population increase is creating pressure on water supply. The decision taken by DEFRA on this plan will affect people from as far away as Medway to the New Forest. However, this plan fails to look at more realistic and sustainable options for drought management including proposing to tanker water from Norway during drought instead. Tankering is the plan for droughts before 2035, assuming the Hampshire Water Transfer is operational by then, which is not guaranteed. The water from Norway is acidic, is a biosecurity risk, excessively expensive and allows for further delays in meeting the need to source water in the region. I object to this unsustainable plan.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. We have received 1,176 responses as part of rdWRMP24 consultation.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>This plan work against climate change rather than with it. The emphasis on desalination and effluent recycling which would deliver up to a one – third of the projected demand in the future is unsustainable and unwise. Accepting this plan will make water much more expensive, add to drivers of climate change and the costs will force poorer people to ration their water use with potentially health damaging consequences.</p> <p>Given we only collect 1% of our rainfall and we do not have the capacity for solar energy that countries which use reverse osmosis and desalination, this scheme does not fit with our geography or environment. What is plan does is create huge debt and our water bills will be made up of 50% interest payments or even more. Other options have not been properly investigated.</p> <p>The cost of this the Hampshire water transfer scheme from Havant alone has increased at an alarming rate from 550 million in June 23 to over 1.3bn in November 24. The operational costs are 395 million pounds but it is known that the energy required, the amount of chemicals and the filters are very expensive, need specialists to manage and, when Thames Water built a desalination plant previously, it was too expensive to operate, failed to work more often than it was functioning and failed to deliver any water in 2022 drought period. Reverse Osmosis filters only last 6-7 years at best. Southern Water has a poor record and culture of fixing only when there is a failure when maintaining their operations, hence the number of fines they have received. So, can SW be trusted to manage Reverse Osmosis?</p> <p>The business case for Southern Water plan is based on population figures which are inconsistent across their documentation and for the periods over which growth is forecast. The assumptions are there will be no reductions in demand from consumers nor will there be a capacity to move water via the Hampshire grid to area of shortages. The population figures in Southern Water's documentation average 23% rather than 16% the ONS figures for population growth in the same period. Southern Water have based their figures partly on Local plans but 70% of these are out of date.</p> <p>Sustainable solutions such as moving the abstraction on R. Itchen and Test to the tidal limits have not been considered and the Arun Reservoir and Test MARS aquifers have been parked from this plan. This means the Environmental agency have been unable to make any assessment of these alternatives. Whilst Southern Water are saying moving the abstraction would increase the salinity in the Estuaries, this can only be true if the amount of water abstracted were to be increased. Moving the abstraction of itself would not change the volume of fresh water flowing into the estuary. And the Environmental Agency has had no opportunity to make an assessment as this option is not in the WRMP. Moving the abstraction on the River Itchen is much cheaper, sustainable and could be delivered much more quickly than effluent recycling, if the investigation and planning work started now, with tunnelling techniques used for the 9km pipeline needed to ensure no significant impact on the river protecting the full length of the freshwater catchment and its ecology. If the abstraction were to be moved to the weir, this would reduce the need to reduce abstraction, saving money and the environment. Yet Southern Water are not even planning to look at this until WRMP29. That is not acceptable. Moving the abstraction makes much more sense than the Hampshire Water transfer scheme. It is cheaper, does not necessitate cutting tunnels across 40km of countryside and would last a lot longer than the 60 years of an Effluent recycling plant.</p> | <p>level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation. We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons.</p> <p>Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. Our estimated cost for Havant Thicket Reservoir is included in our Water Resources Planning tables. We do not recognise the figure for £1.2 billion for the reservoir.</p> <p>We are planning to build new reservoirs where feasible. This includes the Havant Thicket Reservoir, the South East Strategic Reservoir Option (SESRO) and the River Adur Offline Storage. However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan. The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>The Hampshire Water Transfer scheme is also the most environmentally damaging option. Southern Water's preliminary Environmental own assessment of the impact of the Effluent recycling from [REDACTED] in Havant states there is likely to be significant effect on the Solent of the 4 to 5 times more concentrated reject water from the Effluent recycling plant. The concentration of pesticides, forever chemicals and pharmaceuticals are a particular concern. An ongoing study at Portsmouth University with Oxford University is producing evidence that these chemicals are having detrimental and significant effect on the fauna and flora of Langstone Harbour. Given that we are already one of the world's most nature deprived countries and the fragility of food webs due to the rapid increase in world temperature, this is an addition threat to food security.</p> <p>Desalination and Reverse Osmosis processes must run continuously using chemicals and energy. Regardless of the need for water, the Reverse Osmosis plant has to process 30Ml/day and this highly complex process which even when working at its optimum, will not remove all contaminants. Given SW dire record on managing well established and much simpler technology, we do not believe we can trust them to manage this extremely technical process. Southern Water's Effluent recycling plant based in Havant is to be built at Broadmarsh, an historic dilute and disperse Landfill site. This site is known to contain solvents, hydrocarbons and asbestos. The bedrock is chalk where there are water courses beneath. Therefore, there is a high risk of opening these, accelerating the leakage of pollution directly into the Langstone and indirectly into Chichester harbour. These harbours are already under pressure from the high levels of nutrients released from the adjacent sewage works at [REDACTED]. This site is adjacent to Ramsar wetland, and a SSSI and a SAC. an area heavily used by birds and sites of internationally importance for birds. Construction here will disturb and cause the birds, already under pressure from habitat loss and climate change.</p> <p>The option to use [REDACTED] instead of Broadmarsh has been shelved despite it being closer to areas most in need, where there is more room and not is on the coast, therefore reducing the environmental risks, needed a shorter pipeline, less energy to pump the water to [REDACTED] and less disruption to the countryside.</p> <p>The WRMP fails to emphasis leakage reduction and demand management in an urgent manner. It also ignores the Hampshire gird which will enable water transfers. Moving abstractions downstream and using aquifers to reduce the pressure have been delayed for 8-10 years, creating a shortage in supply meaning this plan has no alternatives, thus restricting the choices in this plan to be between the highest cost and most environmentally damaging option and no choice. By delaying these, the EA are blocked from assessing these alternatives.</p> <p>In Havant Borough we have a new reservoir, the only chalk stream fed reservoir in the world which is to be used as an environmental buffer for a recycled Effluent plant using reverse Osmosis. This means it will have no protection for any environmental impacts due the purified water being sent continuously which will have a different chemical composition and a significantly raised temperature, increasing the risks of algae blooms. This use, for which the Reservoir was not originally intended, will have significant effect on its ecology.</p> <p>The timescale for delivery is unrealistic. The Havant Thicket reservoir scheme is already delayed by two years and wet weather and technical problems is highly likely to cause further delays and expense.</p> | <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12). The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>There has been a lack of publicity about this consultation. There has been no noticeable social media campaign. There are no posters where the proposed infrastructure will be built or notification to all the customers of Southern Water. Southern water ruled out the option of telling people on their bills. There has been a lack of transparency. Documents which were restricted that did not compromise security or commercial interests. The documents contained inconsistencies and made it extremely difficult to work out what was going on and excluding the public from being engaged. There is no clear justification for the options selected, and the Littlehampton and Havant Effluent recycling system are the most environmentally damaging.</p> <p>Conclusion</p> <p>I ask you to consider that the plans proposed are rejected and SW are told to bring forward alternatives that can be investigated by the EA alongside those for increasing water capture and moving abstraction. I also ask that Ofwat rules are changed so they are fit for purpose and that the Green House Gas emissions are included for all schemes and that they are given full weight in the decisions.</p> <p>I also bring to your attention the history of the owner of Southern Water, Macquarie Bank. They were the owners of Thames Water until 2017, during which time the debt jumped from £3.4bn to £10.8 bn and they earned to nickname of 'Kangaroo Vulture'. On 28th November, 2024, the Times newspaper announced that the City of London regulators fined Macquarie 13 million pounds for serious failings in its management and systems. Is this a company we can trust to deliver a fair service for a fair price?</p> <p>So I ask that DEFRA oblige Southern Water to prioritise the following in this Water Resource management plan:</p> <ol style="list-style-type: none"> <li>1. Fixing leaks at a faster rate than 53% by 2050 so at least 70% are fixed by that date. Over 100Ml/day of water that has been processed and paid for by customers are lost by Southern water. The rate of mains replacement by Southern Water has been well below the rate required. Allowing Southern Water to proceed with their plans for Reverse Osmosis and Desalination when 19% is lost in leaks is a burden on the population and mostly on those who can less afford it.</li> <li>2. Include the option of moving abstractions to the tidal limit so it can be investigated by the Environmental agency. The plan at the moment, eliminates all other choices and condemns us to an expensive, profit driven options which are against the interests of the British people allowing our hard-earned cash to go overseas and out of our economy.</li> <li>3. Allow water to be abstracted from rivers when the water levels are high and therefore use the free, sustainable, environmental and climate supporting rainfall to be used for the good of all consumers.</li> <li>4. Increasing the storage of water in reservoirs and contained aquifers which will, in combination provide enough water for a 1 in 200-year drought.</li> <li>5. Retain the threat of hosepipe bans as a tool to educate and nudge the public and businesses to manage their water more sustainable and use tiered billing to reward and incentivise reductions in consumption so the wasteful pay for those who conserve. We need to be on the right side of history and make sustainable decisions, not the ones that create more greenhouse Gases and biodiversity loss. This plan will increase debt. It will increase the price of a vital resource to the British people, whilst enriching foreign banks and venture capitalists and damaging our economy.</li> </ol> | <p>having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Yes, desalination is an energy intensive process. However, the drawbacks of any option have to be considered in view of the benefits it delivers. We have excluded desalination options in cases where drawbacks outweigh benefits or where the environmental challenges cannot be satisfactorily overcome.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP774   | <p>I wish to express my concern at the proposal to use recycled sewage effluent as part of our drinking water supply. I am concerned as it will mean a treatment plant on the coast at Broadmarsh, and given its current record on pollution I simply do not trust Southern Water not to cause more problems around our local shores.</p> <p>I am also very concerned about the economics of this proposal. I read that about 20% of Southern Water's supply is lost to leaks, and I feel that reducing this amount massively would be for better for the environment overall and also a great deal less expensive. This must surely be a more sustainable solution to potential water shortages.</p> <p>I also feel that since the original proposals for the Havant Ticket reservoir, which I fully support, there has been a continuous creep of what the company wants to do, and again I simply do not trust Southern Water. Where will their proposals finally end?</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback. Your concern about the use of recycled water in Havant Thicket has been noted.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| WRMP775   | <p>I am writing to strongly object to the plans by Southern Water to recycle sewerage effluent into our new reservoir. My family have no desire to drink sewerage however filtered. There is plenty of rain falling from our skies that should be harnessed more effectively and many many leaks that need to be repaired.</p> <p>While I am writing I walk the Emsworth shoreline daily and it is so obvious when there have been discharges. Not only people using the water for recreation but dogs as well have become very ill after drinking the water in Emsworth harbour and there is also pollution you can see (in the water at the bridge leading to Nore Barn woods)from the field that drains into the harbour. This water used to be crystal clear and some days it is.....but mostly it has the scum on the tide of sewerage.</p> <p>I am a very concerned resident of Emsworth.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Our plan also includes building of two storage reservoirs, Havant Thicket and SESRO.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> |
| WRMP776   | <p>We wish to object in the strongest possible terms to Southern Water's Water Resources Management Plan, and urge DEFRA to reject it.</p> <p>We will not repeat here the environmental and cost implications that have been so ably identified by other objectors. Suffice to say we are in total agreement with them.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The relationship between Southern Water and Portsmouth Water is that of neighbouring water companies. Southern Water and Portsmouth Water are entirely separate and independent companies but have commercial arrangements to transfer water across their respective boundaries. If there are any failures, such as losses of supply to Southern Water customers then Southern Water is responsible, if the failures affect Portsmouth Water customers then</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>Additional objections</p> <p>Our additional objections question the business relationship between Southern Water and Portsmouth Water.</p> <p>I have asked both companies on several occasions for clarification; no response has ever been received.</p> <p>There is a complete lack of transparency in this business relationship.</p> <p>How is any government investment to be shared by two companies?</p> <p>What will happen in the event that both companies are nationalised by this or a future government?</p> <p>When an ecological disaster happens, as it surely will, are the financial consequences to be shared equally between SW and PW?</p> <p>With two companies involved, each can hide behind the other, lay blame at each other's door, and double charge their customers.</p> <p>DEFRA should start by untangling this business relationship, buy out SW's investment in PW, and ensure that the Havant Thicket Reservoir is wholly owned by a single company: Portsmouth Water.</p> | <p>Portsmouth Water is responsible. Portsmouth Water is a 'Water Only Company' meaning that within its area, it provides water services. Southern Water provides wastewater services in the area Portsmouth Water supplies for water.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP779   | <p>Some time ago, I took part in a guided walk around Staunton Country Park and was impressed to learn of, then see, work for Havant Thicket Reservoir. I understood it was to collect natural spring and rain water. How wonderful to forfeit some land for an energy efficient and environmentally kind arrangement to store water needed.</p> <p>For Southern Water to propose pumping "treated" water into this reservoir seems completely unacceptable and out of order.</p> <p>A. Natural water is available here. It would be irresponsible to pump "treated" water into it.</p> <p>B. If more water is required elsewhere, eg Southampton, why not pump the proposed "treated" water directly to their supply source.</p> <p>C. Southern Water's priority should be given to timely repairing and replacing pipework, along with managing their huge sewerage and discharge problems. How can we trust them with this proposal.</p>                                                                      | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Regarding distance from customer centres, using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP780   | <p>I would like to lodge my objections to Southern Water's WRPM (Water Resources Management Plan). My objections are laid out below.</p> <p>Consultation - The consultation process has not been transparent. It is only through the efforts of my local councillors that I have been made aware of this enormous undertaking. This is not acceptable. For something of this scale and impact on the local environment then a full and proper consultation must be undertaken,</p> <p>Environmental Impact - I am extremely worried by the impact on Langstone Harbour and the Solent by this proposed development. Please can I have some details on the risk assessments and impact analysis that has been conducted on building and then operating a reverse osmosis plant on the proposed site.</p> <p>Alternatives - The harbour is already under stress and I have seen other proposals that are far less costly and with less risk that can provide alternative solutions for all stakeholders. An independent analysis of the options and risks is a must for local stakeholders. It is not acceptable that Southern Water can ram through their favoured solution without consultation or assessment of alternative solutions like a leak repair programme or environmentally friendly excess rainwater storage facilities. I would like some level of assurance that these kinds of solutions have been discussed.</p> <p>Please remove the lack of transparency so there can be a proper debate.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation involved 8 roadshows throughout our supply area. Here consultees could visit and speak to the team directly. We also undertook 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation.</p> <p>All of these activities were publicised on our website and on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information.</p> <p>We fulfilled the expectations from planning guidance regarding our visibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below:</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>With regard to Langstone Harbour, A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                    | <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding alternative plans, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Our regulators the Environment Agency (EA), Ofwat, the Drinking Water Inspectorate (DWI) and the Consumer Council for Water (CCW) are independent from Southern Water and they undertake an analysis of our plan along with advice from other bodies such as Natural England (NE). Their analysis looks at all aspects of the plan, including the options and risks. Our SoR shows the feedback we received from these regulators and how we have responded to it. The options and risks are assessed independently by RAPID through the Gated Process, and by Defra through the WRMP process.</p> <p>Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can.</p> |
| WRMP781   | <p>I am writing to you in regard to Southern Water's proposed water recycling schemes.</p> <p>I am at a loss to understand why such a scheme is being pursued in a country with our climate, there is much talk in the media (especially social) that these schemes are used in many places. That is simply not true, they are used in few places with challenging climates and often just for</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket, supplementing the reservoir with purified recycled water will create a new sustainable source of supply. Water from the water recycling plant will be used all year round to supply Southern Water customers,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>agricultural / industrial use and not drinking water. In places such as Singapore (challenged more on land mass) there has been a huge shift towards bottled water and the environment issues caused by the increase in plastics usage.</p> <p>In the UK we collect less than 1% of our abundant rainfall, surely it makes more sense to look at capturing and storing this. I originally supported the reservoir in Hampshire for this reason. Although it would have some environmental impact it was also necessary. There are also options of storing in underground aquifers. Both far more environmentally sound than running a recycling scheme all year (the documentation is clear this cannot just be used in summer months).</p> <p>Southern Water lose as much to leakage as is likely needed in the future, far more priority should be placed on fixing these, figures show the loss of 100 million litres of drinking water every day!!</p> <p>I live on the south coast, Southern Water cannot be trusted with waste water, there is much to point to pumping of sewage into the sea outside of that they admit to (which is already way outside just for emergencies as covered by the guidelines for release). Why would we possibly trust then not to make mistakes with drinking water which would be catastrophic.</p> <p>I realise that there are concerns on the abstraction today, but they could be moved to closer to the tidal limit thus not impacting the chalk streams (again I live right next to one impacted by Portsmouth Water). Doing this in combination with bolder storage options would be far less environmentally damaging. The energy alone to transfer water across the county in a time where climate emergency has been declared seems ludicrous.</p> <p>How can this possibly be allowed to go ahead unchallenged, reports point to it being the most damaging and potentially expensive option.</p> | <p>following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. A Chalk MAR scheme (feasibility trial) is included in our plan for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>licences on the whole river and groundwater system and because of the impact on migratory fish. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP782   | <p>I find it surprising and concerning that I only learned about the Public consultation from a leaflet sent out by the Green Party and not through a more general information outlet - eg my local MP!</p> <p>I truly believe that the Water companies should not be private companies but under Government control, maybe then they would spend more money on clean water production and less paying investors and speculators.</p> <p>Southern Water's lack of action on fixing leaks and their proposal to use recycled sewage effluent from [REDACTED] to top up our water supply are objectional to say the least and must be abandoned.</p> <p>Finally fixing leaks should be an immediate priority not a long term proposal.</p>                                                                                                                                                                                                       | <p>Thank you for reviewing our rdWRMP24 and providing feedback. We have received 1176 responses as part of rdWRMP24 consultation.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>We note your objection to the use of recycled water in Havant Thicket.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We note the objection to the use of recycled water in Havant Thicket.</p> |
| WRMP783   | <p>1. I do not think that Southern Water's Plan to develop effluent recycling as an alternative water source is an appropriate drought solution. There are other more sustainable options that could protect chalk streams such as the Itchen and the Test. (a) Abstraction sites on rivers could be moved closer to tidal limits. (b) Fix leaking infrastructure. (c) Universal usage meters – the more you use the more you pay. (d) Introduce compulsory grey water harvesting schemes on new housing developments.</p> <p>2. Southern Water's Plan emphasises the need to adapt to the possibility of severe droughts while not taking sufficient account of severe heavy rain events, also predicted by scientists. The Plan should focus on maximising opportunities to capture and store this free resource for use during droughts, which will also reduce flooding risks. Use sealed aquifers to store excessive rainfall events.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>a) 1. We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>3. I am opposed to the Hampshire Water Transfer and Water Recycling Project because of its high financial, energy/carbon, chemical and environmental cost. For the cost of this scheme you could build three HTR sized reservoirs to store winter rainfall, which could last for 200 years and have low operational costs. The recycling project is contrary to Southern Water's commitment to achieve net zero carbon by 2030. The operation of the reverse osmosis plant and pumping water 40 km from Havant Thicket Reservoir to [REDACTED] will result in excessive carbon costs and greenhouse gas emissions. The nature of the reverse osmosis process means that it is not fit for purpose as a drought resource. The process must be run continuously, in Havant's case producing a minimum of 30 Ml/day of water, 365 days per year as its minimum flow to avoid damage to the membranes, pipes and pumps. It cannot be switched off when not needed. The Havant effluent recycling scheme is among Southern Water options with the highest negative environmental impact.</p> <p>4. The Reverse Osmosis treatment process is very complex, requiring very close management and monitoring by highly trained and competent operators, a fairly consistent treatment stream, and a lot of maintenance which is expensive. However Southern Water locally has a poor track record with coastal discharges, poor maintenance, telemetry failures, and £92 million in recent fines. We do not trust this company to run this technology safely. People are particularly concerned about the use of Havant Thicket Reservoir as an 'environmental buffer lake'. Thousands of people in the Portsmouth Water area will be drinking the mixed spring and recycled water during an emergency or a drought. From 2040 this will also include parts of West Sussex. All could be placed at risk if any chemical or organic contaminants got through the recycling process and into the reservoir. The results from the trial recycling plant in 2023 raise concern, with bacteria in output water and low sampling rates for pesticides, pharmaceuticals and trace organics. That Southern Water will also be in sole charge of testing water quality from the recycling plant before it enters the reservoir, does not re-assure us.</p> <p>5. I am particularly concerned about the plan to locate the recycling plant on a contaminated landfill site at Broadmarsh, Havant. This is known to contain solvents, hydrocarbons and asbestos among other toxic materials. The site is next to Langstone Harbour, a Ramsar wetland of international importance with SSSI and SAC conservation status. There are significant risks to this habitat, because the plant will require deep piling and tunnelling through the landfill to the chalk aquifer below, likely to release toxic leachate into the Harbour. There are safer and more suitable sites for the plant which avoid this unacceptable environmental risk.</p> <p>6. If recycling effluent must be progressed, [REDACTED] Waste Water Treatment Works, near Fareham, would be a better location. This was considered by Southern Water but shelved. It would have the advantage of having space for the effluent recycling plant away from the coast, reducing environmental risks. Although it would require an environmental buffer lake to be built, it would also be a more sustainable solution as the plant would be closer to where the water is actually needed in Southampton and Winchester.</p> | <p>realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>All our meters going forward will be smart meters. We plan to replace all our existing meters with smart meters by 2030. We are working on several pilots funded by our water efficiency fund looking at how rainwater capture can be used for both irrigation and toilet flushing. This is an option that can be considered for new builds.</p> <p>2. With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>3. We note the objection to the use of recycled water in Havant Thicket. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>4. The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water. Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW. The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges. No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>7. Tankering water from Norway which is suggested as a temporary drought solution if needed before recycled effluent comes on line in 2035 is a ridiculous idea. This would come at excessive cost and high environmental risk. Norwegian water is chemically very different from water in the Test and might introduce non-native organisms.</p> <p>8. Investigation into greener lower cost schemes and their development should be started as soon as possible. Only when these schemes have come into operation, and their water yield known, should there be consideration of whether very expensive effluent recycling projects are needed as an additional resource. A delay might also allow time for technology to progress, perhaps enabling a water purification system which can be switched on and off when needed.</p> <p>9. Defra should change the water industry funding mechanism to stop incentivising infrastructure heavy solutions which have to be paid for by customers. On top of which customers must pay to service the huge debt that will be associated with Southern Water's Plan. Instead Defra should incentivise the development of cheaper sustainable solutions that work with climate change.</p> <p>10. When Southern Water made a material change their plan, from desalination to effluent recycling, they did not carry out a full review of all of the alternative options, nor did they undertake a statutory consultation. This is not acceptable.</p> <p>11. Where recycled effluent has been introduced in other countries for drinking water there has been an increase in people drinking bottled water, resulting in a plastics mountain.</p> | <p>5. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>6. Work formally paused on investigating and developing Fareham Wastewater Treatment Works as a back-up option in May 2023, in agreement with RAPID, and so we have not developed it to the same level as HWTWRP. Should it be necessary to switch to this back-up option, we would need to undertake significant scheme development activity, which would include further studies and investigations including further site selection activity, as well as further rounds of public consultation.</p> <p>7. With regard to the viability of sea tankering, this option is no longer included in our plan.</p> <p>8. Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>resilience options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>9. With regard to funding mechanisms, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> <p>10. With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024. For more information, see here: <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>11. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP798   | <p>please prevent southern water from proceeding with this hyenas crime.<br/>we all have the right to clean purified water and not re cycled water.<br/>southern water should be condemned for not treating effluent properly and this is just another debacle to cover up their failings.<br/>building to new reservoir in this locality to supply water to another county is just improper practices.<br/>before long we will all be drinking brown water " look at what happened in pre victorian times "<br/>do we really need more contaminates or deseses at this time.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | this new thought should be prevented vigorously.                                                                                                                                                                     | Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website, <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP799   | I strongly disagree with the whole idea of retreating sewage .<br>It won't affect me as I am too old but worry about the next generation.<br>Make better use of rainfall.                                            | Thank you for reviewing our rdWRMP24 and providing feedback<br><br>We note the objection to the use of recycled water in Havant Thicket.<br><br>Regarding rainwater capture, we have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Our current plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP800   | Major concerns regarding the proposed plan by Southern Water. I do not agree to used recycled effluent from [REDACTED] to top up our water supply.<br><br>Go back to basics, fix the leaks and collect our rainfall. | Thank you for reviewing our rdWRMP24 and providing feedback<br><br>We note the objection to the use of recycled water in Havant Thicket.<br><br>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.<br><br>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.<br><br>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. |
| WRMP801   | , Re Southern Water's plans to recycle effluent through a reservoir in Havant Thicket                                                                                                                                | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           | <p>When I moved here, in 1961, Portsmouth Water had plans to make a reservoir in the area: they never found it necessary to implement them, despite the increase in population. Our vast regional aquifer has always been sufficient to supply our needs. The recent changes to local rainfall, no doubt a result of global warming, make it likely that supplies will be adequate for the foreseeable future. This development is fairly recent, so Southern Water's plans for a storage reservoir seemed quite reasonable. What is not reasonable is that they propose to store recycled effluent there, the only reason for this apparently being to make a profit by selling it.</p> <p>To most people the idea that profit should be made from the provision of water is repugnant; it would be interesting to now just how much money has been paid out by the company in dividends and bonuses since it was formed, money which would have been better invested in renewal of the infrastructure and investment to provide for the increased demand for sewerage facilities.</p> <p>I do not intend to itemise all the objections to this plan; many people have, no doubt, covered them adequately,</p> <p>I do wish to register that I object very strongly to a proposal which seems to be aimed, not at the public good, but at private profit.</p>                                                                                                                                                                                                           | <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                  |
| WRMP802   | <p>I am writing to respond to the consultation on the Southern Water revised draft WRMP.</p> <ul style="list-style-type: none"> <li>• Measures to reduce water use and mend leaks are clearly good.</li> <li>• Desalination makes environmental sense for a water company with a long coast-line available for sea water, especially with advancing desalination technology.</li> <li>• Water recycling is the most environmentally sound method of all.</li> <li>• Making use of local reservoirs to transfer water in the local area and reduce strain on vulnerable waterways seems sensible.</li> <li>• T2ST: the creation of a long and expensive pipeline to transfer water from the Thames Valley to the coast seems completely mad for the following reasons: <ul style="list-style-type: none"> <li>- This transfer would take water from the most highly water-stressed area in the South East to an area with plenty of sea water available for desalination.</li> <li>- This transfer would depend on the construction of a giant reservoir (SESRO) that may never happen</li> <li>- the project would be extremely expensive since Southern Water would be tangled up in the funding and construction of both the reservoir and the pipeline.</li> <li>- Southern Water would be enmeshed in partnership with Thames Water which has appeared to be on the brink of collapse for months.</li> </ul> </li> </ul> <p>Why has Southern Water allowed itself to be embroiled in this unlikely plan when so many other (sensible) means are available to it?</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ul style="list-style-type: none"> <li>• Your comment has been noted, and we thank you for your support.</li> <li>• Our plan includes a number of desalination plants in our Eastern area.</li> <li>• Your comment has been noted, and we thank you for your support.</li> <li>• Your comment has been noted, and we thank you for our support.</li> <li>• T2ST is considered to be in accordance with the National Framework and Regional Plan requirements, in that T2ST forms part of a portfolio of supply side strategic options identified as being required in the WRSE draft Regional Plan. The National Framework supports this approach, recognising that substantial new supply infrastructure will be required. <ul style="list-style-type: none"> <li>- SESRO is being jointly developed by Thames Water, Affinity Water and Southern Water as a regional solution. However, for the purpose of WRMP24s, it is included in Thames Water's WRMP24. Sensitivity analyses were carried out by using different sizes of SESRO as well as excluding SESRO altogether. The results show that if SESRO cannot be built, it will need to be replaced by a large transfer from Severn Trent Water to Thames Water or another reservoir. For further details, see Section 10 of Thames Water's WRMP24 <a href="https://www.thameswater.co.uk/media-library/home/about-us/regulation/water-resources/wrmp24/technical-report/programme-appraisal.pdf">https://www.thameswater.co.uk/media-library/home/about-us/regulation/water-resources/wrmp24/technical-report/programme-appraisal.pdf</a></li> </ul> </li> </ul> |

The scenarios included in our rdWRMP24 are that abstraction during droughts from the Test and Itchen should not continue beyond this date. This is a fixed assumption in the regional investment model and schemes such as HWTWRP and the T2ST are selected as the best value options for continuing to meet demands in this scenario. Although these schemes are expensive there are no other environmentally sustainable, lower cost options that can meet water supplies needed in Hampshire.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP803   | <p>Dear Sirs</p> <p>I wrote previously in response to the consultation document in July 2024.</p> <p>I am surprised to read in this latest WRMP 2024 plan that there has been very little if any progress on the feasibility of the cheaper options proposed.</p> <p>This plan seems committed to the most expensive and environmental damaging options.</p> <p>Leaks in the infrastructure are currently at about 100million litres a day which is five times the output planned from the reservoir. The target of 53% less leakage by 2050 is pitiful.</p> <p>There is little commitment to riving down demand for water with the compulsory installation of water meters.</p> <p>Why is no effort being made from the predicted climate change of wetter winters and dryer summers. Could the storage of this water not be considered.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>All our meters going forward will be smart meters. We plan to replace all our existing meters with smart meters by 2030.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |
| WRMP805   | <p>Dear Sirs</p> <p>Havant Thicket Reservoir</p> <p>When the proposal to construct a reservoir was first tabled, it was made to look as if this was Portsmouth Water Company creating a storage facility for one of our most precious needs— Fresh Drinking Water. That was my understanding and we indicated out support for the proposal.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With regard to planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>We now find that the proposal originates from Southern Water—a company notorious for contaminating our local streams and harbours, and it isn't to store drinking water, but semi-treated sewage effluent.</p> <p>We are ashamed that we were so easily persuaded as to the merits of the scheme, and wish to withdraw our support, indeed we are totally opposed to what is now proposed, and are astonished that our Council appear to support it.</p> <p>We are fortunate to have a plentiful supply of clean water, and are let down by the organisation paid to treat and purify the contamination caused by our domestic lifestyle. Other areas are affected by heavy industrial usage and exotic chemical contamination, but we do not have that problem and should be able to lead an ordinary existence without feeling guilty.</p>                                                                                                                                                                                                                                                                                                                           | <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>We note your objection to the use of recycled water in Havant Thicket. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Despite perceptions that the South-East of England receives high volumes of rainfall, it is nonetheless classified as an area of 'serious water stress', see <a href="#">here</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP806   | <p>I wish to express my disapproval of Southern Water's Water Resources Management Plan, and ask that you reject it, for the following reasons:</p> <p>There is no need to recycle treated waste water when this part of the country has adequate rainwater (despite the gloomy forecasts of global warming, which at the moment is resulting in more winter rains). Recycling of waste water has high overhead costs, and, if badly managed, can lead to much more expensive mitigation processes.</p> <p>At present, large volumes of clean water are lost through leakage in a poorly maintained and updated distribution network. It would be better to improve the pipes, rather than using inferior quality water to make up the required needs.</p> <p>The extraction of river and borehole water should be rethought, so that the maximum amount can be extracted - the further away from the sea, coast and population the water extraction and storage are, the more water 'escapes' into the sea, or has to be transferred to where it is needed.</p> <p>There are other reasons, but these are serious enough .</p> <p>PLEASE reject the Management Plan.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Despite perceptions that the South-East of England receives high volumes of rainfall, it is nonetheless classified as an area of 'serious water stress', see <a href="#">here</a>. We note your objection to the use of recycled water in Havant Thicket however, supplementing the reservoir with purified recycled water will create a new sustainable source of supply. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. We note the objection to the use of recycled water in Havant Thicket.</p> |
| WRMP809   | <p>I strongly object to the 'revised 'plan....the southern water company cannot even be trusted not to pollute our waterways, let alone a valuable reservoir. It stupidly sold off its own reservoirs, so is the architect of its own demise.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP810   | <p>I wish to object most strongly to this revised Draft Water plan by Southern Water and ask that Defra reject it.</p> <p>It is clear to me that the plan fails the 'common-sense' test on so many dimensions that it should be rejected forthwith. The short-comings of the plan are too numerous to mention them all but for me the key ones are:-</p> <ol style="list-style-type: none"> <li>1. Mixing effluent with drinking water should be a last resort rather than a first.</li> <li>2. Not making the most of capturing and storing rainwater is a major omission from any strategic plan.</li> <li>3. The plan involves continuous pumping of many millions of litres of effluent/water over many kilometres and as such is energy hungry and environmentally unfriendly.</li> <li>4. The plan does not prioritise reducing leakage and usage as fully or as quickly as it should.</li> <li>5. The strategy should be to make more use of assets like the new Havant Reservoir or natural aquifers. Instead, I have it on good authority, that the planned mixing of effluent into the Havant Reservoir will result in algae growing there and undermining the leisure usage that was a key component of it's initial justification.</li> <li>6. I recognise that any solution will be hugely costly but it appears to me that the planned expenditure is being misdirected and so will result in a HUGE mistake which our children and grandchildren will have to bear the brunt of and also rectify.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. Our Water Resource Management Plan not only has to look at our water needs for the next 5 years, but needs to look ahead as far as 2075. This means we need to understand changes to our water supply needs and impacts from climate change and population growth. In addition, all water company Water Resource Management Plans now need to leave more water in the environment for the benefit of our plants and wildlife. This means that water companies now need to look at water supply and storage options that have not been traditionally used, such as water recycling and desalination. We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding a sustainable water supply into the future means we need to look at all viable schemes and will have to make decisions with the support of our national Government and industry regulators which benefits all society.</li> <li>2. Regarding rainwater storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</li> <li>3. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</li> <li>4. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</li> </ol> <p>Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. With regard to possible algal blooms, purified recycled water is extremely clean. Water quality in Havant Thicket reservoir</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. The water recycling proposals are not expected to impact the proposed recreational use of the reservoir.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP811   | <p>I am deeply concerned about Southern Water's water resources management plan and am writing to express my opposition to it.</p> <p>I believe this plan, which does not focus on developing the most sustainable solution for the collection and storage of rainfall, in the context of climate change, is simply a poor and expensive proposal. I have a number of main issues with the plan.</p> <ol style="list-style-type: none"> <li>1. Rainfall is free and we should work out how to harvest it and store it. Additionally, a major problem with the performance of our water companies is their failure to tackle leakage reduction: instead of plans like this one, this should be a priority, and more effective leakage reduction would contribute to our water supply needs.</li> <li>2. I do not wish to drink recycled effluent, when rain water is freely available, if properly managed. Furthermore, how can we be assured that this will be managed safely, when Southern Water's track record of pollution incidents is so lamentably poor on this. Southern Water needs to build our trust that our water is safe to drink; this plan will further erode public confidence in our water supply and in the safety of our rivers and harbours.</li> <li>3. I am concerned at the huge cost of building and maintaining such a massive infrastructure as that proposed. I believe that there are perverse incentives operating here, which reward companies like Southern Water for such building projects, rather than incentivising lower cost sustainable solutions.</li> <li>4. The environmental impact of this plan is negative and the siting of the recycling plant so close to Langstone Harbour must be a major concern.</li> </ol> <p>To conclude I do not support this plan and urge you to reject it and to require Southern water to develop a more sustainable plan which shows a proper concern for the environment, and works with climate change, rather than a hugely costly plan which has a massive carbon footprint with a high risk to the environment.</p> <p>Yours sincerely</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The National Framework, Water Resource Planning Guideline and other supplemental policies all recognise the need for water resource plans to not only secure a water supply but to also add to wider environmental and societal benefit. Our Water Resource Management Plan not only has to look at our water needs for the next 5 years, but needs to look ahead as far as 2075. This means we need to understand changes to our water supply needs and impacts from climate change and population growth. In addition, all water company Water Resource Management Plans now need to leave more water in the environment for the benefit of our plants and wildlife. This means that water companies now need to look at water supply and storage options that have not been traditionally used, such as water recycling and desalination. We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding a sustainable water supply into the future means we need to look at all viable schemes and will have to make decisions with the support of our national Government and industry regulators which benefits all society</p> <ol style="list-style-type: none"> <li>1. Regarding rainwater storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</li> </ol> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <ol style="list-style-type: none"> <li>2. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will</li> </ol> |

|           |          | <p>continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <ol style="list-style-type: none"> <li>3. The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</li> <li>4. We note your objection to the use of recycled water in Havant Thicket. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</li> </ol> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP812   | As a resident of Portsmouth I am shocked that Southern water are allowed to even contemplate using a reverse osmosis recycling plant for the population. When they only use 1% of rain water and lose 100 million litres of treated drinking water a day because of lack of maintenance and upgrades. I'm appalled and think they are purely going down this route for profit ( 45 million) . With climate change, rising river levels and also increased rainfall, surely it would be more eco friendly and cheaper to increase reservoirs and storage .To upgrade the current pipe and drainage would be not before time !                                                                                                                                                                                                                 | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates.</p> |
| WRMP813   | I do not want my family to be drinking recycled sewage water!! Would you yours?<br>I live very close to one of Southern Waters treatment plants. We have had flooding and days where the smell has been so bad we have been unable to be in our garden. What hope do Southern Water have of correctly managing the new proposed Water Management Plan if they cannot look after the treatment plants and pumping stations they have now?<br>With the changing climate we can expect more and more rain. Currently Southern Water only utilise 1% of rain water and still manage to lose 19% ie 100 million litres a day through leaks etc.<br>The rejected water from the new plant is apparently going to be pumped into the Solent and will be 4 times stronger than the sewage currently discharged into the sea in this area. You cannot | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>Water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>swim safely without passing faeces as it is. Very nearby is Langstone Harbour and Farlington Marshes which are beautiful natural areas for all sorts of wildlife.</p> <p>I truly believe that this whole Plan is monetary based with Southern Water making a profit of 45 million pounds which will basically come from its customers bills.</p> <p>Please consider rejecting this plan and making Southern Water come up with a plan that will work with climate change and be kinder to the environment.</p> | <p>We note your comments regarding odour in the area near Portsmouth Harbour WTW. As this consultation is for our Water Resources Management Plan which covers our plan for provision of drinking water, we are unable to comment. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates.</p> <p>We note your objection and environmental concerns supplementing recycled water in Havant Thicket. A consultation on the water quality impacts in the reservoir and the Solent as part of our ongoing Environmental Impact Assessment will be held in 2025.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>The National Framework, Water Resource Planning Guideline and other supplemental policies all recognise the need for water resource plans to not only secure a water supply but to also add to wider environmental and societal benefit. Our Water Resource Management Plan not only has to look at our water needs for the next 5 years, but needs to look ahead as far as 2075. This means we need to understand changes to our water supply needs and impacts from climate change and population growth. In addition, all water company Water Resource Management Plans now need to leave more water in the environment for the benefit of our plants and wildlife. This means that water companies now need to look at water supply and storage options that have not been traditionally used, such as water recycling and desalination. We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding a sustainable water supply into the</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | future means we need to look at all viable schemes and will have to make decisions with the support of our national Government and industry regulators which benefits all society                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP814   | <p>It is essential that DEFRA do not support the proposal by Southern Water to use Havant Thicket to hold recycled water. The original consultation by Portsmouth Water stated that the site was for spring water. Scrutiny of SWA plans reveals many flaws and my objections are as follows:</p> <p>The plan does not strive to work with predicted changes to our climate to capture more winter rain for use in dry summers. Rainwater provides a good quality free raw water resource and we need to prioritise schemes that capture and store it for dry summers. (For further detail refer to item A below).</p> <p>2<br/>SW have not completed a full review of the plan considering all alternative options as “a full re-appraisal exercise was not considered time or cost beneficial” (Annex 20, page 3). Given the importance of finding immediate solutions for the rivers Test and Itchen and at Pulborough, along with the large volume of objections to the options selected in the previous draft plan, a full and more robust review was essential. More sustainable options previously ‘parked’ by SW which work with predicted climate changes should have been more robustly assessed and included in the revised draft plan.</p> <p>3<br/>It is clear that SW have only focused on identifying options to fill the gap as a result of the delay to recycling options in Hampshire and at Littlehampton (Annex 20, page 1 and 3) instead of seriously looking at prioritising more sustainable options.</p> <p>4<br/>The timescales for delivery of effluent recycling options are unrealistic given their complexity and consenting requirements. Having put back the delivery year for the Hampshire effluent recycling scheme to 2034-35 in the Statement of Response, in places in the latest plan this option has now been brought forward to 2033-34. This is not realistic given the public opposition, risk of an enquiry, risks associated with bringing forward technology which is new to the UK for effluent recycling, and developing on old landfill sites, the recycling options are much more likely to be delayed further, leaving our precious and iconic chalk rivers with no solution for longer.</p> <p>5</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1) With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>2) Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>3) The purpose of the targeted options appraisal process for rdWRMP24 was to mitigate the impacts of a proposed extended reliance on the River Test and Candover drought options in Hampshire post 2030 and to limit the use of Pulborough surface water drought option under droughts of more than 1-in-200 year severity beyond 2030. Annex 20 to our rdWRMP24 Technical Report describes the work carried out in this regard.</p> <p>4) With regard to delivery timescales, we aim to have the Hampshire Water Transfer and Water Recycling Project operational by 2034.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>SW proposal to continue to rely on and extend the use of the Candover Drought Option (augmentation boreholes) and drought permits (Technical Report page 138-139) should not be permitted beyond 2030. The plan extends their use up to 2034. (For more detail refer to item B below.)</p> <p>6<br/>SW should not be allowed to rely on continued use of the Candover drought option, Lower Itchen and Test drought orders, while they just wait for the Hampshire effluent recycling/ transfer scheme to be delivered as proposed (Annex 20, page 1 and 2), as it is inevitable that the Hampshire recycling scheme will be delayed further and will not be available in 2035, a more sustainable solution must be developed.</p> <p>7<br/>Tankering water from Norway in a drought cannot be accepted as a credible drought plan. (For more detail refer to item C below).</p> <p>8<br/>SW are unnecessarily pessimistic in their assumptions regarding population growth and this is driving a large demand deficit. The information provided is also contradictory with Annex 7b forecasting 23% growth and Annex 14 referring to a 17% increase by 2050. Surely that level of population growth is not credible. (For more detail refer to item D below.)</p> <p>9<br/>Assuming high levels of abstraction reform is over precautionary when what will be required in future is currently very uncertain as SW environmental studies are still ongoing. This is driving a large demand deficit which helps SW justify their unsustainable effluent recycling schemes. (For more detail refer to item D below.)<br/>Assuming no abstraction at all even in winter from the rivers Itchen and Rother is not appropriate and over precautionary. (For more detail refer to item E below.)</p> <p>10<br/>SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet their slow programme for improvements means even by 2050 they will still be leaking about 10% of all the water they treat, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious mains replacement programme they will never get leakage under control.<br/>An industry leakage specialist tells us that if Southern Water prioritised and funded leakage reduction they could strive to achieve a 50% reduction by 2040 and a 70% reduction by 2050, rather than the 53%leakage reduction target they have set themselves by 2050.</p> | <p>5, 6) It is our desire to 'avoid' use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>7) With regard to the viability of sea tankering, this option is no longer included in our plan.</p> <p>8) For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>9) The government has set a 25 Year Environment Plan target of 75% of waters to be close to their natural state. Abstraction reform plays a key part in this plan. Sustainable water abstraction is essential to ensure that river flows and groundwater levels support ecology and natural resilience. Since 2008 the Environment Agency has made changes to over 270 abstraction licences to prevent over 30 billion litres of water per year being removed from the environment where abstraction is unsustainable.</p> <p>Water companies, through their WRMPs, need to plan for future deficits in supply generated by reductions in abstraction licences. Through the Water Industry National Environment Programme (WINEP), studies and investigations are ongoing to understand the environmental impact of our current licences. Any future licence changes are informed by the conclusions of these WINEP environmental studies.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>Government figures indicate that Southern Water lose a further 3.2% of the water they take from the environment before it even reaches a treatment works. This shows a complete disregard by the company for just how precious water is.</p> <p>11<br/>SW have not taken account of the completion of the Hampshire Grid improvement programme which will be available from 2030 to rezone the Western supply area. The Company option review and selection process is based on individual supply zones. Taking account of the increased ability to transfer water within Hampshire by merging existing zones could have changed the options appraisal process. As the plan does mostly cover the period beyond 2030 the improved connectivity of the grid in the Western Area supply area by 2030 should have been fully considered and taken into account in the plan.<br/>(For more detail refer to item F below.)</p> <p>12<br/>The investment model is not fit for purpose it needs to be urgently revised so that it does not preferentially select the use of drought options/permits. The model needs to be able to preferentially select smaller more sustainable options, whereas it currently favours large infrastructure schemes which should be a last resort once more sustainable options have been exhausted. (For more detail refer to items K and L below.)</p> <p>13<br/>The possibility of market trading for 'water credits' is mentioned. This is a concern as it could create a new loophole for water companies and speculative developers to exploit to make money, while not actually doing anything to fix the problems faced.</p> <p>14<br/>Given spiralling costs, programme delays, significant environmental effects, the need to operate 365 days a year, lack of legacy and short life-span, the Hampshire effluent recycling scheme cannot represent best value for customers. In fact, the restricted documents confirm that the Hampshire effluent recycling/ transfer scheme is almost as expensive to operate (OPEX) per megalitre as tankering water in from Norway!</p> <p>15<br/>The selection of effluent recycling via Havant Thicket and transfer (40km) to [REDACTED] results in unacceptably high carbon impact and greenhouse gas emissions, more than double that of any other transfer or desalination scheme. In fact, the restricted documents confirmed that the Hampshire effluent recycling/ transfer scheme has a higher total carbon, average carbon emissions &amp; embedded carbon impact than sea tankering water in from Norway! (For more detail refer to item M below.)</p> <p>16</p> | <p>10) The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>11) We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p> <p>12) The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>13) Environmental markets are one way to facilitate greater investment in environmental improvements delivered by technical solutions. A Water Saving Market (WSM) would work by facilitating trade between buyers and suppliers. A well-designed market will have clear governance and operational settings. Affinity Water are investigating the feasibility of a Water Saving Market to deliver water efficiency solutions and support water neutrality. As the only region in the UK with established water neutrality requirements, Southern Water is supporting Affinity Water in this feasibility study, together with Local Authorities from the region. Sussex North WRZ is one area proposed for the study, as an area with existing water scarcity issues and developmental pressures. SW continues to work with all stakeholders in the SNZ region to support greater understanding of water scarcity issues and explore potential solutions.</p> <p>14) Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>SW Preliminary Environmental Information Report (2024) confirmed a likely significant effect on the marine environment from the Hampshire effluent recycling scheme. Modelling for water quality impacts on the reservoir is still not available. The scheme should not move forward until the environmental risks/impacts are known.</p> <p>17<br/>The process of environmental assessment and screening methodology cannot be robust if unsustainable and environmentally damaging schemes like the Hampshire effluent recycling/transfer scheme get through. In fact, the Strategic Environmental Assessment confirmed that the Littlehampton Effluent Recycling scheme and Hampshire effluent recycling scheme had the highest negative impact scores, yet both of these options were selected by Southern Water.</p> <p>18<br/>This is a short-sighted water resource plan, customers will still be paying for the effluent recycling infrastructure after it has become redundant due to the Ofwat funding mechanism. With the recycling plants expected to last just 60 years, the huge cost of constructing these schemes cannot be justified, especially as these options leave no tangible legacy for the future. The Hampshire effluent recycling / transfer scheme alone will cost at least £1.2 billion. Customers will also have to pay for the eye-watering debt generated well into the future. For more information on the key concerns and environmental impacts associated with the Hampshire effluent recycling scheme via Havant Thicket Reservoir please refer to 'Effluent Recycling – the 15 Key Concerns'.<br/>Concerning option selection</p> <p>19<br/>Moving the [REDACTED] abstraction to the tidal limit would be a better, more robust and sustainable solution to protect the whole of the freshwater catchment and restore natural flows in a drought. This is not mentioned as an option that has been considered in the SW Technical Report, nor Annex 20. (For more detail refer to item E below)</p> <p>20<br/>In the future SW indicate they will work with stakeholders to look at moving the abstraction on the River Adur to the estuary (transitional waters) to allow more abstraction (Annex 20, page 30-31) but this is not in the current plan. Moving river abstractions to the tidal limit can have environmental benefits, restoring more natural freshwater flows in rivers to protect the ecology. This scheme should be selected now and prioritised as a more sustainable solution. (Why is the solution of moving abstractions to the lower catchment of rivers not being prioritised for investigation as a more sustainable solution across the region?)</p> <p>21<br/>More challenging targets must be set for delivery of the groundwater borehole schemes and Test Managed Aquifer Recharge Scheme in Hampshire, as they require minimum infrastructure and are within the company's control. Investigation and delivery should commence in 2025 to ensure these schemes are delivered as quickly as possible, to provide at least 13.8 Ml/d to help better manage resources in the catchments and protect the rivers Test and Itchen from drought orders. We need Defra and the regulators to strongly challenge on this to ensure a quicker delivery date. (For more detail refer to item H below.)</p> <p>22</p> | <p>Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>15) Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>16) A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>17) We have engaged an independent consultant for our environmental assessments who are following the standard methodology for these assessments. The investment model takes into account the outcome of environmental assessments and if two otherwise equivalent options are available, it will select the option with lower environmental impact.</p> <p>18) The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>19, 20) We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>The investigation of other aquifer storage schemes in Hampshire, the IOW and West Sussex is not being prioritised to establish the yield they could provide. This is essential and should be prioritised and funded urgently so that these schemes can be included as feasible options. Aquifer storage has been successfully used for many years across the world, including in California and in the Thames Basin (UK). Tests in Dorset have previously shown that aquifer storage and recovery is feasible in confined sections of the chalk. (For more detail refer to item G below.)</p> <p>23<br/>Proposed schemes to recycle water currently wasted at the [REDACTED] and Test Surface Water WSW should be prioritised more urgently to help minimise abstraction on the Test and Itchen all the time, not only in a drought (Annex 20, page 32).</p> <p>24<br/>No work is taking place to ensure the alternative Hampshire effluent recycling option using [REDACTED] and a bespoke environmental buffer lake are advanced as a back-up, despite this work having been allocated funding by Ofwat. Nor is there any reference to further investigation of a combined Portswood and [REDACTED] scheme. A scheme previously indicated to be feasible with sites that are closer to where the water is needed. (For more detail refer to item J below.)</p> <p>25<br/>Negotiations with a very large industrial water user in South Hampshire should have been brought forward as a priority, to explore alternative supply options when the contract expires in 2026, to free up drinking water for SW customers in a drought (Annex 20, page 6) and provide more certainty for the plan.<br/>Could a desalination plant that trials research into alternative technology, potential uses for the hyper saline solution and reducing energy consumption be a way forward for this site (Annex 20, page 30 refers) perhaps in partnership with industry.</p> <p>26<br/>In West Sussex the need for network upgrades is being used as an excuse not to bring forward schemes at existing works that would increase supply (Annex 20, Appendix A). If all of these schemes rejected for this reason were brought forward, they could deliver more than 20MI/d of water to the Central Region. This is more water than is to be provided by the proposed Littlehampton (Ford) effluent recycling scheme which will discharge to the Western Rother. The necessary network upgrades in West Sussex should form part of the plan. Network upgrades are taking place in Hampshire to address such concerns, why not in West Sussex?</p> <p>27<br/>Across the Western and Central Area the fact that sources 'might not be available in a drought' is being used by SW as an excuse not to increase capacity at existing water treatment works. If the works were upgraded they could be used at higher capacity during normal operation, leaving other groundwater sources that would be available in a drought to rest or be used less, so that more groundwater is available in a drought. Schemes to increase capacity at existing works could deliver 18 MI/d of water across the region and these options should be prioritised. However, SW are less likely to find this an attractive option where the source is surface water because it is cheaper to treat and supply groundwater every day. SW need to plan to use their</p> | <p>21) A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>22) Our plan includes two groundwater schemes on the IOW to provided up to 3.4MI/d 2040.</p> <p>23) With regard to prioritisation of recycling water at Itchen WSW, as noted in the rejection register against these schemes, enhancements to treatment process are needed at these sites to reduce process losses. These would be considered for WRMP29.</p> <p>24) We are focussed on delivering the HWTWRP by 2033-34. The alternative option to use Fareham for recycling water has not been shelved but is put on hold.</p> <p>25) We will be exploring the option of amending the bulk supply agreement with a large industrial user in HSW WRZ when the existing contract expires in 2026. However, we are not planning to consider any changes to the bulk supply agreement for WRMP24.</p> <p>26) Network enhancements in the Central area were not taken forward as the required enhancements could not be delivered by 2030. These will be reconsidered for WRMP29.</p> |

--------------------------------------------------------|
|           | <p>water sources in a more sustainable way that works with climate change, not just use the cheapest sources first.</p> <p>28</p> <p>Multiple cheaper and more sustainable schemes have been rejected by SW because they 'cannot be delivered in time' (presumably this means by 2030).</p> <p>17 schemes in Hampshire and IOW (Western Area) could deliver at least 42 Ml/d.</p> <p>7 schemes in West Sussex (Central Area) could deliver at least 18 Ml/d</p> <p>Yet the effluent recycling scheme in Hampshire which will supply both Hampshire and West Sussex cannot be delivered until 2035 either, and that timescale will almost certainly slip further. SW are putting all of their 'eggs in one basket'. Surely it is better, more resilient and more sustainable to develop multiple smaller schemes, close to where the water is needed, many of which do not even require new consents, just treatment plant or borehole upgrades.</p> <p>29</p> <p>SW are still not urgently investigating and bringing forward additional new reservoir schemes in the short to medium term, despite this being customers preferred choice. The delivery of the River Adur project is not scheduled until 2039/40, no other reservoir schemes are in the pipeline in Hampshire or West Sussex in the revised draft plan.</p> <p>30</p> <p>Groundwater schemes on the Isle of Wight (IOW) are not brought forward as the water gained cannot be transferred to the mainland to help the rivers Test and Itchen in a drought (Annex 20, page 5-6). However, if implemented they would reduce the amount of water that needs to be transferred from Southampton to the IOW providing a benefit that should be pursued.</p> <p>31</p> <p>The timescale for delivery of ten years should not be seen as a valid reason to reject provision of a bi-directional link between the IOW and the mainland, especially as it could allow water to be used more flexibly in a drought, including use of future spare water from Sandown.</p> <p>32</p> <p>There has been little proactive work by SW to investigate buying or trading licences with private supply users across the region. In a restricted document supporting the previous draft plan it indicated buying just one licence could deliver 19.7 Ml/d. There should be more proactive investigation and negotiation by SW to buy existing private abstraction licences, this in turn would then open up the potential for a more flexible approach to the use of licences within a catchment to meet water supply needs and environmental objectives.</p> <p>33</p> <p>Much more effort needs to be put into working with industry, agriculture, golf courses and community buildings (schools, social clubs and so on) to fix leaks, save water and reduce their use of drinking water for non-potable uses. Southern Water pilots have already demonstrated that great reductions can be achieved with free surveys and provision of grants to encourage the adoption of more sustainable solutions. Yet their targets for improvement in the first 10 years of the plan are woeful, with no benefit by 2030, and hardly any by 2035 (Annex 14, Table 15).</p> <p>34</p> <p>The free water butt scheme trialled on the IOW should be rolled out across the SW supply area to customers as a priority.</p> | <p>27) The amount of water we can abstract from river and groundwater sources are determined by our abstraction licences, which typically specify the maximum amount of water we can take from a source over a year with a limit set on maximum daily abstraction. We cannot take unlimited amount of water from these sources during wet periods.</p> <p>28) Notwithstanding the fact that these 17 schemes are not explicitly identified in this query, there is little benefit in developing 17 schemes by the 2030s when the three schemes we are progressing will deliver the over twice the volume over a similar timeframe. We did not simply reject schemes because they could not be delivered by 2035. Only the schemes that were considered to mitigate the use of drought permits and orders beyond 2030 had to meet the criterion of being deliverable by 2030, because schemes delivered after 2030 would not be able to mitigate the reliance on drought permits and orders beyond 2030.</p> <p>29) We have looked at over 50 reservoir options as part of our options appraisal process over the last 3 WRMP cycles. These are not taken forward due to environmental concerns that will make it difficult to get planning permission. However, we review these options for each WRMP cycle and will review them again for WRMP29.</p> <p>30) Our plan includes two groundwater schemes on the IOW to provided up to 3.4Ml/d 2040.</p> <p>31) The delivery time of an option is the reason for rejection only in cases where water is needed earlier than the option can be delivered. The delivery time in itself is not a reason for rejecting an option.</p> <p>32) We are open to licence trading. The Sittingbourne industrial re-use scheme in our Kent area is effectively a licence trading scheme that will provide up to 8Ml/d from 2030-31 onward.</p> |

| 36        | Concerning inadequate consultation with water users and affected communities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 37        | Critical documents to understanding and evaluating the options available have not been made available to the public. Instead, SW have classified the Options Appraisal and key environmental assessment reports as restricted. In fact there are more documents restricted in 2024, than there were in 2022. Is this a deliberate play to hide important information? As SW know it is unlikely that customers will be prepared to travel to their Worthing HQ to view these large reports that cannot be properly reviewed in one visit. Other water companies made this information more accessible. | 34) Regarding water butts, following the success of the pilot scheme, this is now being replicated in Kent, where we are installing more than a thousand free water butts to help reduce storm overflows in Whitstable, Deal, Swalecliffe, Margate and in Fairlight, East Sussex.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 38        | Customer research across the water industry has shown a clear preference for more natural solutions such as aquifer storage, reservoirs and catchment management. Why are SW not listening to their customers and instead pushing ahead with the least favoured options of desalination and effluent recycling?                                                                                                                                                                                                                                                                                        | 35) Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 39        | Assurances given by SW that water quality modelling and energy use information for the Hampshire effluent recycling scheme would be available in time for the 2024 consultation have not been met.                                                                                                                                                                                                                                                                                                                                                                                                     | 36) Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature. |
|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.                                                                                                                                                                                                                                                                                                                                                                                        |
|           | Lack of adequate and meaningful engagement /consultation with customers;<br>– A very significant alteration is taking place to customer's water supply with the source changing from river, spring or groundwater to recycled effluent. SW should be proactively engaging with all their customers to get their feedback on this material change.                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>– SW did not follow the legal requirement for a new statutory consultation on their plan when there was a material change to the option(s) selected in 2021, when the [REDACTED] desalination scheme was rejected, and the WRMP19 back-up option of discharging recycled effluent to the River Itchen was also rejected. When there was a material change to the plan in 2021 SW should have undertaken a comprehensive review of all the available options and a full public consultation. This did not happen.</p> <p>– As a result, communities in the areas affected by the selected options did not have the opportunity to comment at the ‘formative stage’ of the plan, before the new effluent recycling options were selected.</p> <p>– At the time of previous consultations (2020 to 2022) posters were not even placed at sites impacted to make local communities aware that a consultation was taking place. Nor have posters been placed at impacted sites for this Autumn 2024 consultation.</p>                                                                                                                                     | <p>We made clear in our Summer 2024 Consultation for the Hampshire Water Transfer and Water Recycling Project that water quality modelling and assessment work was ongoing and would be fully reported in our Development Consent Order application. As that work has progressed, we are now consulting on it as part of our Spring 2025 Consultation.</p> <p>As part of our Summer 2024 Consultation, we shared our preliminary assessment of carbon emissions associated with the Hampshire Water Transfer and Water Recycling Project. This was based, in part, on energy usage information for the project. An updated carbon emissions assessment will be provided as part of our Development Consent Order application. The energy usage information used to support that will be appended to the assessment.</p> <p>39) Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> |
| 40        | <p>The consultation documents are vast, very repetitive and fail to provide important information, or make it restricted and inaccessible, making it very difficult for a lay person to understand/get through the consultation reports. Is this intentional?</p> <p>Since this is a ‘once-in-a-generation’ chance to address future water needs, there needs to be a more open discussion about moving to a more sustainable approach which works with predicted climate change, not against it.</p> <p>Further Detail</p> <p>More detail on some of these concerns is set out below with page numbers provided to help find the relevant detail in the SW consultation Technical Report.</p> <p>A</p> <p>The SW revised draft plan does not strive to work with predicted changes to our climate, which modelling has shown means we will get wetter winters and drier summers. We need a complete re-think about how, where and when we take water from the environment.</p> <p>We need a strategy that includes;</p> <ul style="list-style-type: none"> <li>• Moving abstractions (river and boreholes) to the bottom of the catchments,</li> </ul> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <ul style="list-style-type: none"> <li>Collecting more water in winter and storing it for use in dry summers. This would reduce environmental impacts and allow the extent to which abstraction reform is required to be reduced. Instead, SW plan to leave the current abstractions where they are and 'manufacture' additional water to address the regulatory requirement to reduce impacts on the environment. They plan to build chemical, energy and carbon hungry infrastructure (effluent recycling and desalination), which must operate 24 hours a day, 365 days a year, even though it is intended as a drought resource. Constructing large pipelines to transfer the water long distances (40+km), because the water is not being manufactured where it is needed. The huge amount of energy required, and carbon generated will only add to our problems with climate change and energy insecurity. Now is the time to rethink our strategy and prioritise and invest in more sustainable solutions, not invest in infrastructure heavy unsustainable solutions, which once selected will stop the Company investigating and bringing forward more sustainable solutions for another generation. We agree urgent action is needed now to invest to create more robust and resilient water supplies, but what is needed are more sustainable solutions that work with climate change, not against it.</li> <li>Moving river and borehole abstractions down catchment to protect the environment and restore more natural flows.</li> <li>Developing new reservoirs and aquifer storage schemes enable more winter water to be stored for use in dry summers.</li> </ul> <p>SW say this is a once in a generation opportunity to develop more resilient supplies, but we need to take action now to make the right decisions to invest in more sustainable solutions that leave a long-term and positive legacy, not chose unsustainable solutions to manufacture water, which SW see as a quick fix and which makes them a profit, but future generations will regret as they will last no more than 60 years!</p> <p>B</p> <p>The SW proposal to continue to rely on and extend the use of the Candover Drought Option (augmentation boreholes) and drought permits (page 138-139) should not be permitted beyond 2030. Instead SW should be required to move the [REDACTED] river abstraction to the tidal limit to allow natural flow to be restored in the freshwater catchment during a drought, bring forward their groundwater borehole schemes in Hampshire sooner, plus actively investigate and bring forward additional aquifer storage options. SW should not be allowed to continue to use these drought options/ orders while they just wait for the Hampshire effluent recycling/transfer scheme to be delivered, as it is inevitable that the recycling scheme will be delayed further and will not be available in 2035. Having failed to understand the risks of the [REDACTED] desalination scheme, which led to its inevitable rejection, SW should not be allowed by Defra and the regulators to repeat the same mistake and put 'all of their eggs in one basket' for a scheme that involves new technology to the UK, significant environmental risks, and has no guarantee of delivery. As a minimum a twin track approach on water resource development in Hampshire must be adopted for the short to medium term.</p> <p>C</p> <p>It is unbelievable that in Hampshire SW now propose to tanker water from Norway in a drought instead of proactively investigating more sustainable solutions such as moving the [REDACTED] abstraction on the River Itchen to the tidal limit, or capturing more winter rain and storing it for</p> | <p>40) We provided detailed information on our rdWRMP24 through a technical report accompanied by 22 annexes. The WMRP, by its nature, is a highly technical plan. We need to demonstrate that our plan is legally and technically compliant with the regulatory framework and that makes the use of technical terms unavoidable. However, we do try to make the plan understandable to a broad audience and therefore included a detailed glossary at the start of our rdWRMP24 main technical report. In addition, we also published a non-technical summary that highlighted key features of our plan.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> |

|           | <p>dry summers. Tankering 45 Ml/d is equivalent to moving 18 Olympic size swimming pools of water every day. On page 136 of their revised draft plan SW acknowledge “considerable risks and uncertainties remain, especially around water quality and our ability to mitigate the identified environmental impacts linked to both tankering and transferring water from the port (Southampton) to Test WSW site via temporary pipeline”. On page 31 SW confirmed; “The Board acknowledges that the implementation of bulk import by sea tankers presents a number of deliverability challenges (which had previously resulted in it being rejected)”. A solution the GMB union (who represent water industry workers) described as “farcical and ridiculous”, noting that; “The UK uses just a tiny amount of the rain that falls from our skies. Private water companies have utterly failed to invest in the infrastructure needed to capture more and reduce the need for farcical plans like this”.</p> <p>Tankering water from Norway cannot be accepted as a credible plan.</p> <ul style="list-style-type: none"> <li>• The cost to customers will be enormous, including fixed annual costs and reservation charges even when the water is not required (Annex 20, Page 11).</li> <li>• The environmental impact will be huge, in addition to the massive energy and carbon impacts, the temporary pipe would be placed “along the banks of the River Test” (Annex 20, Page 9). It is hard to believe that private landowners along the river will give their consent.</li> <li>• There is a risk of importing non-native species to the River Test catchment when the water is stored at existing lakes alongside the river, or if the temporary transfer pipe from the port leaks or bursts.</li> <li>• There are water quality issues as the water is soft, has a low pH, low total dissolved solids and even in Norway has to be re-mineralised before use (Annex 20, Page 9). What if the transfer pipe leaks into the river?</li> </ul> <p>What will be the impact on fish and the wider river ecology?</p> <p>D</p> <p>SW are unnecessarily pessimistic and over precautionary in the choices they make which creates a much higher demand forecast, which in turn helps them to justify very large infrastructure projects, from which they can make a large profit. For example;</p> <p>I. Using even higher growth forecasts of population for the period 2025 to 2050 than in the last draft plan (page 82), even though the industry regulator Ofwat has confirmed they can use the much lower Office of National Statistics (ONS-18) population growth of 16%, the figures which most closely aligns with the core strategy in the Ofwat guidance (page 118). Note: The information provided on population growth is also contradictory, using different time periods, with the Technical Report indicating a growth forecast of 23% by 2075 is used and Annex 14 referring to a 17% increase by 2050. Surely that level of population growth is not credible? The regulators must seriously scrutinise the growth figures being used.</p> <p>II. Assuming high levels of abstraction reform when what is required is currently very uncertain as their environmental studies are ongoing. Page 118 confirms they are using high environmental destination targets, which go further than BAU+ and Environment Agency Enhanced Scenarios.</p> <p>III. Assuming there will be no abstraction at all on the Rivers Itchen and Rother, not even in winter when the river levels are high or in flood. Page 107 states; “We have been ambitious through our ‘alternative’ scenario and are investigating the solutions that would be required to allow us to stop all abstraction in our most sensitive catchments including the River Itchen and</p> |                         |

|           | <p>lower River Rother and River Arun to remove any potential risk to designated wetlands, going beyond the required reductions just to meet flow targets".</p> <p>IV. Used the supply forecast sequences that move to a 1-in-500 year drought resilience sequence by 2040-41. "As the choice of timing to move to 1:500 resilience is within company control, we have also explored alternative dates for achieving the 1:500 drought resilience through sensitivity analysis" (page 115).</p> <p>Using these assumptions helps SW to forecast a much higher demand sooner, then they use this to help them dismiss more sustainable options on the basis they are too small to meet the demand. The 2024 plan demand forecast should be based on more moderate predictions of population growth and abstraction reform, with the proactive investigation of more sustainable solutions to meet immediate needs in the interim. More pessimistic forecasts should only be used when they become more certain.</p> <p>Note: Ofwat previously indicated that effluent recycling at the smaller volumes originally proposed by SW was not cost effective. By driving up the forecast demand SW are trying to justify a greater need and thus a requirement for a larger plant. The costs then go up and perversely SW make this very expensive infrastructure more acceptable to Ofwat (the water industry financial regulator).</p> <p>E</p> <p>Assuming no abstraction at all from the Rivers Itchen and Rother (page 107) is not appropriate and makes no sense.</p> <ul style="list-style-type: none"> <li>• Water can be abstracted in winter with no significant adverse impact, and abstraction can help to reduce flood risk.</li> <li>• The abstraction can be moved to the tidal limit to protect the whole of the freshwater catchment, while complying with Water Framework Directive Guidance for transitional waters (estuaries). This would be extremely beneficial in a drought, restoring the natural freshwater flow of the river for the benefit of the ecology and geomorphology. This would require minimal new infrastructure compared to the high infrastructure solutions being proposed by SW and would be much cheaper for customers. In Annex 5 (page 37/38) SW indicate "we intend to investigate this option further for the revised draft WRMP". However, this is not mentioned as an option in the Technical Report which supports the revised draft plan, nor in Annex 20 (Appendix A). In the restricted Option Appraisal this was deferred, not to be considered until WRMP29, why not now? <p>Note: If initially the current [REDACTED] abstraction volumes were permitted to be taken from a new abstraction at the tidal limit, they can still be reduced over time as new solutions come on line by having a 'time limited' more flexible licence which is subject to regular review and takes into account the timing of fish migration. In the meantime, natural flow could be restored to more than 12km of the River Itchen, including in a drought.</p> <p>F</p> <p>Despite there being an ongoing Hampshire Grid scheme which will improve connectivity of the SW distribution network in Hampshire which was due to be delivered in 2028, SW have chosen to ignore these improvements and they have not reviewed or merged the boundaries of water supply zones in Hampshire for the revised draft plan period 2025 to 2050. SW have indicated they will not do this until they develop the 2029 WRMP (page 35), so the benefit of recently funded improvement programmes are not being taken into account in the current draft plan. As</p> </li></ul> |                         |

|           | <p>the Company option review and selection process is based on individual supply zones (page 118 and 132 confirm) including assessing whether there are sufficient options in each zone, and whether there is sufficient connectivity?, this may be adversely impacting the decisions being made for the Hampshire Zones, the volumes of water needed under different scenarios and the options being considered. The fact that zones are still broken down in Hampshire and assessed individually is likely to have disadvantaged more sustainable option selection. Taking into account the ongoing development of the Hampshire Grid could have changed the options appraisal process.</p> <p>G</p> <p>SW state on page 131 that the location of Aquifer Storage Recharge (ASR) options would be limited to locations with suitable geology. This is true for where the storage would actually take place, but rather implies SW may have been dismissive of these more sustainable options for this reason. There is no recognition that if the new 'Hampshire Grid' is operational (as it will be soon due to the ongoing improvement programme), and you take into account that water can be transferred into the SW Hampshire supply area through the Portsmouth Water network, this allows excess water to be collected in winter and stored in any suitable confined aquifers across almost anywhere in Hampshire and West Sussex, where SW have large supply shortfalls in a drought. SW have previously identified a number of aquifers across this area (including on the IOW) with the potential for aquifer storage, but not progressed them to the investigation stage, instead they 'parked' them for further consideration in 2029, wasting a further five years, when such schemes could play a key part in meeting short and medium term needs. This is an example of where there has not been the will to properly investigate more sustainable options, and where the decision not to rezone Hampshire for this latest revised draft WRMP assessment could have had a significant adverse effect on the option selection process. If a number of aquifer storage schemes were developed, each with a relatively small yield, this could make a significant difference to provide sustainable water sources in a drought, especially in the western area. Tests in Dorset have previously shown that aquifer storage and recovery is feasible in confined sections of the chalk.</p> <p>H</p> <p>We are pleased to note on page 25 (Technical Report and Annex 20 pages 5 and 6) that some groundwater schemes have been brought forward as the local community had advocated since 2022 including;</p> <ul style="list-style-type: none"> <li>• Drilling new boreholes at Romsey to provide 4.8 MI/d by 2030-31;</li> <li>• Removing constraints at Kings Sombourne groundwater source to provide additional 2.5 MI/d from 2030-31;</li> <li>• Implementing Test Managed Aquifer Recharge scheme to provide up to 5.5 MI/d from 2035-36.</li> </ul> <p>However, given the very limited infrastructure required (see pages 164-165 and 169) regulators need to challenge why these new water resources cannot be brought on line sooner to provide 13.8 MI/d to help better manage resources in the catchments and protect the Rivers Test and Itchen from drought orders.</p> <p>While some environmental studies and trials will be needed a previous SW estimate for developing the Test MAR scheme was six years including the trials. The initial assessment was also that the yield could potentially be significantly higher. Two years have already been</p> |                         |

|           | <p>wasted. If work started immediately this drought resource could potentially be available by 2030. A more challenging target should be set for delivery of these schemes, especially as these options are completely within SW control and not dependent on other water company input.</p> <p>The option to recommission Chilbolton near Andover was rejected as it only provides a small benefit (0.5 Ml/d) to one zone, but not the Test or Itchen (Annex 20, page 5). SW need to investigate if there is an option to better connect zones to enable this resource to be utilised as part of the Hampshire Grid project?</p> <p>I</p> <p>SW indicate that they have used costs (CAPEX and OPEX) from 2021 (page 134/135). For the Hampshire effluent recycling scheme the costs have spiralled since 2021, CAPEX and OPEX costs have gone up considerably since the Gate submission. The costs developed in 2020-21 are definitely out of date as costs have spiralled to a minimum of £1.2 billion. If the best value assessment of the option is based on 2021 costs it will be flawed.</p> <ul style="list-style-type: none"> <li>• If the true costs of the effluent recycling scheme via Havant Thicket Reservoir were known in 2021/22 would the scheme have been selected as best value?</li> <li>• In the light of the known minimum £1.2 billion price tag has the schemes selection been robustly reviewed? Regulators need to look at this carefully.</li> </ul> <p>Reference is made on page 138 to additional costs included of £96.8 million for new treatment (ceramic membrane filtration system) at [REDACTED] to treat the recycled water.</p> <p>– What additional treatment will be needed at Farlington WTW before supply of recycled water to Portsmouth Water customers, and has that been included in the costings?</p> <p>J</p> <p>No work is taking place to ensure the alternative effluent recycling option using [REDACTED] and a bespoke environmental buffer lake are advanced, even though SW received Ofwat funding to progress investigations. Page 137 confirms; “Earliest delivery delayed from 2030-31 to 2037-38 to allow additional time in case the preferred option cannot be progressed”. There is a concern that SW are manipulating the situation to ensure that at the Development Consent Order application stage for the Hampshire effluent recycling/ transfer scheme the Company will be able to argue there is no viable alternative available, in the timescales needed to meet the Company commitment to EA and NE for abstraction reductions on the Rivers Test and Itchen. Hoping that this will push the scheme through despite their being likely significant environmental effects. When effluent recycling from [REDACTED] WWTW could provide a source closer to where the water is needed, which is cheaper to operate and potentially has less environmental impacts.</p> <p>K</p> <p>SW indicate on Page 148; “ When making a decision about inclusion of an option, the Investment Model (IVM) used looks to see if it is economic to defer investment until after 2030 and only includes investment in the 2025-30 period if it is economic to do so once all the futures after the 2030 and 2035 branch points are considered”. This sounds like SW are deliberately manipulating the model to prevent the selection of smaller more sustainable schemes until after 2030, in favour of continued use of drought permits on the Test and Itchen, and the selection of larger schemes which cannot be delivered until later, to make sure the Company get the solution they want selected, which delivers more guaranteed profits. This is not acceptable we</p> |                         |

|           | <p>need the model to freely select and bring forward the development of smaller more sustainable local solutions now. If that pushes back the delivery timescale for when effluent recycling is needed that is a good thing, as it allows time for advances in more sustainable technology for effluent recycling and desalination to be developed.</p> <p>Note: A report commissioned by SW indicated that the development of nanotechnology could be a game changer for the viability of desalination in the near future.</p> <p>L</p> <p>The Investment Model used prioritises continuing abstraction from rivers in a drought (options/ permits) over other solutions as that is cheaper, even when other options are available (page 154). The criteria the investment model is using are clearly flawed, relying on manual interventions to force more appropriate option selection in the early years of the plan, when SW chose to do so. This is likely to be one of the reasons why other more sustainable options have not been selected in the past.</p> <ul style="list-style-type: none"> <li>• The regulators need to scrutinise the modelling carefully to ensure that sustainable solutions are not held back.</li> <li>• The model should have been updated as a priority before the plan was revised, not after.</li> <li>• Additional more sustainable options that have previously been 'parked' by SW and may not even make it to the investment modelling stage as potentially feasible options also need to be brought forward so that they can be selected for investigation. For example, moving abstractions to the tidal limit and aquifer storage options. If they are not selected in the plan they will never get funded to assess the yield they could provide. This then becomes a 'negative loop' where they cannot be selected because SW say they don't know what yield they could deliver. Without funding for investigation SW will continue to make the same excuses for not selecting these options in 2029. Without selection in the this plan the necessary investigations will not be funded.</li> </ul> <p>M</p> <p>Effluent recycling via Havant Thicket and transfer (40+km) to [REDACTED] results in unacceptably high carbon impact and greenhouse gas emissions. Page 251 confirms that the individual scheme with the largest greenhouse gas impact is the bulk import from Havant Thicket Reservoir to [REDACTED] SW estimate that emissions will be 898 ktCO<sub>2</sub>e (Figure 10.1), more than double that of any other transfer or desalination scheme. It is not even clear if that figure includes the emissions from the effluent treatment process. Page 252 acknowledges; "The water sector accounts for nearly 1% of UK greenhouse gas emissions and has an important role to play in tackling these ahead of the UK's 2050 target". Stating SW are; "Ensuring carbon is a key focus by instilling carbon conscious decision-making and processes into the Southern Water culture" If that were the case how is effluent recycling selected? SW have committed to being net zero carbon by 2030, yet this energy and carbon hungry scheme is selected for 2035. There is no indication that SW are striving to plan in a sustainable way when this plan selects the highest carbon and green house gas emission options in the short term (tankering from Norway) and in the medium to long-term effluent recycling via Havant Thicket Reservoir with a 40+km transfer pipeline to [REDACTED] and later 32+km pipeline into West Sussex.</p> |                         |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| WRMP816   | <p>I am a concerned resident of Emsworth in Havant Borough. I am a consumer of water provided by Portsmouth Water (PW) and water waste removed by Southern Water (SW). I have spent a lot of time researching solutions to the problems of supplying clean safe water to residents of Hampshire and Sussex in future. I am grateful to have the opportunity to offer the opinions below, grouped into four different sections.</p> <p>I visited the site of the reservoir being constructed at Havant Thicket two years ago after attending a consultation on recycling water from effluent by SW at Havant Council Offices. I also paid a personal visit to explore the proposed recycling site at Broadmarsh, a landfill site and I have been on a guided walk along the approximate route suggested for trenching and tunnelling pipes through and under residential Leish Park from Broadmarsh to the reservoir,. Last week I revisited the site of the reservoir being constructed, this time with a presentation and Q&amp;A session by a knowledgeable representative of PW.</p> <p>My impression is that many customers and consumers are unaware of the reservoir being constructed or the proposal that it be filled partially with water recycled from effluent by the reverse osmosis technique. All customers should have been sent (with their water bills?) information and references about the plans PW have for the reservoir and the proposal SW has for supplying it, maintaining its water level and distributing to [REDACTED] water works 40km away. There has been publicity but not nearly enough.</p> <p>1. I oppose the use of Broadmarsh as a site to construct a recycling plant. My objection is that it is too close to Langstone Harbour (already contaminated with sewage outfalls and other pollutants) and Farlington Marshes (an important RSPB bird sanctuary). Broadmarsh was a landfill site which harbours many pollutants. Building infrastructure above and within this contamination will disturb it, risking the contents more likely to leach into the sea. Unless they can be contained by some sort of impermeable membrane or other enclosure there is serious danger of further pollution in the harbour while the foundations of a recycling plant are being laid and during its operation.</p> <p>It seems to me that a solar farm is a suitable alternative for this land which I have visited. It is fairly isolated from residential areas in a region with high hours of sunshine compared with most of mainland Britain.</p> <p>I do not know whether the wind climate would allow a wind farm to be viable.</p> <p>2. The rising population and increasing number of homes necessitate planning for more water supply: new reservoirs are necessary. Filling the Havant Thicket reservoir with natural chalk stream and spring water is welcomed, providing the precious chalk rivers are conserved. I have reservations about using water from other sources, whether recycled from effluent or by other means. This water is bound to have different mineral constituents than chalk streams which will change the taste and may have ecological consequences. Are there robust plans to alter the processed water constitution to match that from chalk rivers?</p> <p>These reservations are nothing to do with the water coming from sewage, providing it is treated appropriately. They are founded on the knowledge that the high pressure needed for reverse</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation involved 8 roadshows throughout our supply area. Here consultees could visit and speak to the team directly. We also undertook 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation.</p> <p>All of these activities were publicised on our website and on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information.</p> <p>We fulfilled the expectations from planning guidance regarding our visibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations.</p> <p>SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>1. We acknowledge your support for Havant Thicket reservoir but note your reservation. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. We note your concerns about the chemistry and ecology of the reservoir however the purified recycled water is extremely clean and any water quality impacts are the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>osmosis to work requires excessive energy with a likely high carbon footprint. The enormous energy and carbon footprint to both build and maintain the plant is aggravated by the plan to construct, run and maintain a system of piping and trenching to transport the water under or through Leigh Park estate from Broadmarsh to Havant Thicket. The plans are incompatible with reducing carbon footprint to net zero. Leigh Park is heavily residential (once considered to be the largest council estate in Europe) with schools, a thriving Rugby Club and housing which would be disrupted during construction. It is estimated the cost of constructing the recycling plant, piping and trenching will be in the region of £1.2billion, and rising. This is on top of the reservoir price. One wonders how much the poorest consumers will suffer if the price of good quality water increases accordingly.</p> <p>Furthermore, the recycling project will have to run 24/7, even in times of excess.</p> <p>One has to wonder too how many people will buy water bottled in plastic rather than risk drinking from a tap.</p> <p>A good idea to discourage clients from consuming excessive amounts of water is to charge everyone a cheaper amount for consuming clean water up to a modest limit. Above this threshold prices per unit volume could increase to deter excess and waste. The more the client uses the more they pay pro rata. Previously it has often been company's policy to give discounts for the purchase of large amounts of their produce. It is time for the opposite strategy in the water industry, to deter clients from using excessive amounts of water.</p> <p>3. One has to ask why Southern Water are pushing so hard for recycling effluent by reverse osmosis. They have not offered alternative schemes except to suggest tankering water from Norway in times of water shortage. This is unsustainable, energy expensive and inconsistent with addressing climate change. It is a ludicrous idea which should not be contemplated except in an emergency.</p> <p>Why are they promoting RO recycling so hard? Their track record for water management is poor and they have endured some heavy fines. Can they be trusted to deliver a technical process which is much more complex ?</p> <p>It is more sensible to collect and store excess water locally in rainy times to use during drought or when demand is high. Aquifers are needed for this. SW must have considered this so why have they abandoned the idea ? Why is recycling by reverse osmosis deemed a preferable option ? The pressure to dump sewage in lakes, rivers and seas after storm surges could be reduced by saving water and storing in aquifers when there is a surplus, too.</p> <p>SW should be moved to repair more leaks. Domestic and business consumers should be incentivised to use and waste less water. They should motivate farmers, horticulturalists, glasshouse growers and gardeners to collect and store rain from roofs for use when watering their crops.</p> <p>The idea of abstracting water from further down rivers is sound. The precious chalk water streams and rivers with which we are blessed need protection. By taking out water near their mouths (but above the high tide marks) the flow of water throughout most of the lengths of these rivers would be maintained. I understand this is a relatively novel idea which would protect most of the river from excessive abstraction.</p> | <p>taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy. In populated areas such as Leigh Park, large sections of the pipeline would be tunnelled underground, using trenchless techniques, to minimise disruption to the community. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>We plan to conduct tariff trials once our smart metering plan is implemented and we have a better understanding of the way demand varies daily and seasonally along with key household attributes (property type, household composition, socio-demographic variables etc). This will help us select a representative sample as well as an appropriate tariff model (rising block, reducing block, seasonal) to test.</p> <p>2. We understand that some customers may not agree with using Havant Thicket reservoir to store purified recycled water but the challenges we face finding a sustainable water supply means we must consider these alternatives, as conventional sources are no longer available to us as they once were. The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We introduced our Water Saving Audit Programme in April 2024 to help businesses reduce water consumption and save money off their bill by offering a tailored solution depending on their industry and line of work. We have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. The aim of this would be to protect vulnerable ecosystems upstream. We have, for example, considered</p> |

|           | <p>My view is that a mix of different methods of obtaining water should be employed which should not include recycling from effluent. We use a very small percentage of precipitation to extract water for consumption. Let us extract more of our own sustainably in time of need and not rely on expensive technology and tankers of water from Norway! (Normally I do support recycling resources but it is not necessary here. Rainfall is likely to increase as the climate warms)</p> <p>4. The water from Havant Thicket reservoir has to be pumped 40km to [REDACTED] to alleviate the projected shortfall in the relatively wealthy areas between Winchester and Southampton. Why is/was there no plan to build a reservoir there? The financial and environmental expense of building and laying pipes and pumps to transport the water 40km will endure for decades as an extra burden which need not have happened had planning taken this into consideration.</p> <p>I hope the content of this email will be carefully considered.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>relocation of the River Itchen WSW abstraction to a point nearly 11km downstream, just upstream of the tidal limit of the River Itchen. This option was not viable however, because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. We will continue to review options on a case-by-case basis over the next AMP.</p> <p>3. HWTWRP has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Our Water Resources Management Plan (WRMP) no longer includes sea tankering from Norway.</p>                                                                                                                                                                                                |
| WRMP817   | <p>I strongly object to Southern Water's plans to pump treated effluent into the reservoir being built in Havant Thicket, Hampshire.</p> <p>We have had a lot of rain and very little is collected and stored in reservoirs, but we have had lots of effluent discharges into our 'protected' harbours because it's easier to dump than to process. If more reservoirs were built, so more rainfall can be captured, it would help alleviate this major problem. Southern Water's plans to build a new processing plant on reclaimed contaminated landfill at Broadmarsh, will cause more pollution caused by the reject water from this new processing plant, again damaging the ecosystems of both Chichester and Langstone Harbours. Even a Southern Water report confirms this is likely to have a significant effect. Disruption to wildlife habitat to put in pipelines to pump treated effluent to the Havant Thicket reservoir would be very damaging to the environment.</p> <p>Have Southern Water fully investigated cheaper alternatives that would be more sustainable in the long term. Less damaging to the environment.</p> <p>Then we have a pipeline ripping across the countryside over 40k away to deliver water to where it's needed.</p> <p>I for one, have lost confidence in Southern Water, they already pollute our harbours and rivers, now this proposal will destroy a chalk fed reservoir's biodiversity.</p> <p>I will not be drinking recycled effluent so sadly will be switching to bottled water.</p> <p>Please reject these proposals and insist alternative environmentally, sustainable alternatives be found.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes the construction of two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and the proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> |

Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP818   | <p>I'm writing to object to Southern Water's water management plan.</p> <p>Southern Water's £1.2 billion proposal to recycle treated wastewater for the Havant Thicket Reservoir is misguided. Instead, we must prioritise sustainable practices that capture and store increased winter rainfall in new reservoirs and aquifers, which would address flooding and enhance biodiversity.</p> <p>The current leakage rates are alarming: 22% of water is lost before reaching customers. Southern Water must implement a rapid and effective plan to renew their aging pipe network; a replacement cycle of 1 in 1000 years is simply unacceptable.</p> <p>Southern Water's history of pollution incidents raises serious doubts about their ability to manage complex effluent recycling technology. Trust is lacking when their operational failures have already jeopardised local ecosystems.</p> <p>To achieve carbon neutrality by 2030, Southern Water must develop environmentally friendly strategies that minimise carbon footprints. Their current plans prioritise high-emission alternatives, which are incompatible with the urgent need for sustainable solutions.</p> <p>Constructing the effluent recycling plant on a contaminated landfill poses unacceptable risks. An alternative site must be identified to protect the chalk aquifer and surrounding environments from potential pollution.</p> <p>This is a major concern so I very much hope my objection will be taken into consideration.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |
| WRMP819   | <p>I am very disappointed to have read the proposal from Southern Water (SW) after supporting, with some excitement, the original proposal from Portsmouth Water (PW). I object to SW's draft Water Management Plan on several issues.</p> <p>Storing raw/rainwater water and having recreational use for the Havant Thicket reservoir provided a sustainable, all year round water storage facility for many potential uses and a reduction in the need to find water in other locations.</p> <p>The UK only collects about 1% of rainwater, the proposed solution is not doing this and is recycling dirty water from the [REDACTED] Waste Water Treatment Works [REDACTED] to pump it to Havant Thicket reservoir. The solution should be to improve storm water capture and storage across the region and/or abstract water further downstream closer to estuaries where greater volumes can be captured.</p> <p>Other issues with the proposal include:</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>Significant new infrastructure with huge environmental impact and damage where more simple schemes would suffice. See below</p> <p>The new builds would require running costs leading to higher customer bills, increasing the net worth and share price of SW but not providing a cost benefit to the customers.</p> <p>For example</p> <p>The SW Broadmarsh ERP is on the coast perhaps 10 -15m above mean sea level. Havant Thicket is over +25m above this. Constantly supplying and pumping 365 days/annum even when it's not needed is hugely energy demanding and entirely wasteful.</p> <p>SW is also intending to pump treated effluent up 90m to Portsdown Hill to gravity feed there to a Water Treatment Works over 40km at [REDACTED] increasing energy demand even higher.</p> <p>SW is not constructing an ERP for PW customers. The Havant Thicket approval was not therefore granted to take recycled effluent. The fundamental purpose of the original application for a reservoir for raw water storage has significantly changed. Effectively, SW is attempting to subvert full public engagement by using Havant Thicket for another purpose.</p> <p>According to SW in their July and August 2022 initial consultation on the re-cycling of ""dirty"" into ""treated"" water pumped to Havant Thicket, they had PW's approval. This is contrary to how it was conveyed in 2020.</p> <p>Add in the UK's Net zero Carbons emissions target for 2050. Why then would anyone consider pumping 365 days a year – an extremely expensive process.</p> <p>PW is not intending to monitor water quality in their new Reservoir but instead rely on SW. Water Quality needs independent monitoring!</p> <p>SW has a poor reputation for fixing leaks currently at a rate of 19% and therefore cannot be trusted with these large scale infrastructure projects until they prove they can fix the waterworks!</p> <p>The financial burden to SW consumers of a new ERP at Broadmarsh and pipes to Havant Thicket Reservoir is now £1.2 to 1.4 billion or £30/annum per customer.</p> <p>Three Winter storage reservoirs could be built for the Broadmarsh ERP (the estimated cost for the construction of the Havant Thicket Reservoir is £350 million).</p> <p>The [REDACTED] Water Treatment Works meanwhile is not expected to be served by Broadmarsh until 2035/40 and in drought conditions could be expected to rely on Ocean Going Tankers from Norway.</p> <p>What a crazily expensive and emission rich solution when a rethink of the project could solve all of this.</p> | <p>shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. All of our drinking water sources will continue to be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

|           | <p>SW's [REDACTED] [REDACTED] [REDACTED] persistently fails. It discharged raw sewage into the "Protected" Langstone Harbour for 181 hrs in the eight days between 24th October and 1st November 2024. This is not a new failure.</p> <p>SW is able to earn profits from investing in new infrastructure but not from maintaining pre-existing infrastructure – this is perhaps the fundamental reason for this mammoth planning process resubmission and is wholly wrong. Improving the profits of SW over the benefits of its customer base is a travesty and DEFRA should stop this proposal, at the very least, review it via a postponement of the decision.</p> <p>There is No Economic or Environmental Benefit in DEFRA authorising the grant of a Development Consent Order for Effluent Recycling Plant at Broadmarsh.</p> | <p>Regarding the suggestion that three reservoirs could be built for the cost of Broadmarsh ERP, no detail is provided on proposed locations, capacities and volumes that could be reliably obtained. Therefore, we are unable to comment on the relative merits of HWTWRP compared to these schemes.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding prioritisation of recycling water at River Itchen WSW, as noted in the rejection register against these schemes, enhancements to treatment process are needed at these sites to reduce process losses. These would be considered for WRMP29.</p> <p>Regarding effects on coastal water bodies, A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP820   | No to recycled drinking water that's treated sewage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Thank you for reviewing our rdWRMP24 and providing feedback. We note your objection to the use of recycled water in Havant Thicket.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| WRMP821   | <p>I live in close proximity to the new reservoir and was delighted when I heard it was going ahead. What a fantastic idea to fill the reservoir from excess spring water lost during the winter months.</p> <p>However, I was very concerned when I learned that southern water are proposing to pump treated effluent to the site.</p> <p>Some of my concerns are as follows</p> <p>Southern water have a very poor track record with regard to pollution incidents and I would find it difficult to trust them to send suitably treated effluent to the site.</p> <p>I understand that Southern Water lose 100mega litres of treated drinking water every day through leakage. Surely this issue should be addressed as a high priority?</p> <p>The water from the reservoir will probably taste different and as more customers realise they are drinking treated effluent there will be many complaints. Many people will not want to drink the water, I and many others won't allow their children to drink it. This will definitely increase the number of bottled water sales meaning more unwanted plastic waste.</p> <p>There will be additional treatment required to get the treated effluent to a suitable standard which will be extremely expensive, of course with the customer paying the extra costs.</p> <p>Additional pumping and treatment will increase the carbon footprint of the process. Surely we should be looking at more carbon friendly processes?</p> <p>We should be finding ways of storing more rainwater. There would high initial costs to build rainwater storage but so much cheaper and greener in the long run.</p> <p>Very few people in my area seem to be aware of southern waters plans.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |
| WRMP822   | <p>I am writing to express my deep concern regarding Southern Water's plans to recycle treated wastewater into drinking water, including the proposed effluent recycling schemes such as the Havant Thicket Reservoir project. These plans are deeply troubling and fail to address the pressing need for sustainable, long-term solutions to water management in the UK. Southern Water's history of pollution incidents, inadequate maintenance, and numerous prosecutions has eroded public trust. Their inability to properly maintain traditional water infrastructure raises serious doubts about their capacity to manage the complex and untested technology required for effluent recycling. This creates an unacceptable risk to public health and the environment.</p> <p>The UK receives abundant rainfall, yet only 1% is collected. Instead of turning to unsustainable and high-risk recycling schemes, Southern Water should focus on sustainable water management solutions:</p> <ul style="list-style-type: none"> <li>• Reduce Leakages: Southern Water must prioritise a comprehensive program to renew its outdated pipe network NOW</li> <li>• Invest in Rainwater Collection and Storage: Building new reservoirs and confined aquifers to capture winter rainfall for use during dry periods offers multiple societal benefits, including flood management, biodiversity enhancement, and recreational opportunities.</li> <li>• Sustainable Water Transfers: Developing low-energy solutions like local storage and transfers would mitigate the environmental and carbon impacts of long pipelines.</li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p>                                                                                                                                                                                                                                   |

|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>The proposed effluent recycling schemes have the highest carbon footprint among the options considered, which contradicts Southern Water's commitment to becoming carbon neutral by 2030. Moreover, the risks associated with building recycling plants on contaminated landfill sites near Langstone Harbour and the Solent are simply unacceptable. These schemes appear to prioritize profit—estimated at £45 million for the Hampshire recycling project—over environmental and societal responsibility. Customers should not bear the burden of servicing the significant debt created by such costly and unsustainable projects.</p> <p>Southern Water has failed to adequately inform and consult the public on these critical plans. Withholding 12 volumes of detailed information from public view only adds to the perception of a lack of transparency. A more open and inclusive consultation process is essential for trust-building and for ensuring that better alternatives are considered.</p> <p>I URGE Defra to reject Southern Water's current plans and demand the development of a more sustainable strategy. The focus should be on solutions that work with, not against, climate change and that prioritize environmental protection, public health, and long-term societal benefits.</p> <p>The state of the UK's sewage and water management systems is a national disgrace, and this situation must be addressed urgently. Allowing these plans to proceed without accountability only perpetuates a cycle of mismanagement and public distrust. We deserve better from those entrusted with our most vital resource.</p> <p>Thank you for considering my concerns. I trust that Defra will act decisively to demand better from</p> | <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |

|           |                                                                                                   | <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below:<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> |
| WRMP823   | We are writing to object to Southern Water's revised plan for the Havant Thicket recycling plans. | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>As local doctors we are extremely concerned regarding the health implications for our population. The precious commodity we have locally of the chalk stream water should be protected. This water will be entering the reservoir only to be contaminated by recycled effluent. Southern Water cannot be trusted. They are responsible for the contamination and pollution of our coastal waters. We strongly feel we should not be trusting them with these proposals for our drinking water supply. The building and new pipework required for the proposal again ignore the huge environmental cost.</p> <p>The recycling of more effluent and the proposal to tanker water from Norway to Southampton in the event of drought is not a solution, both expensive and environmentally unsound. Better, more sustainable options to store significantly more than currently (only 1% of winter water) and do more to reduce the enormous loss of nearly a fifth of treated water (by repairing leaks and replacing mains) should be the priority.</p> <p>We have the responsibility to the local population for generations to come to challenge this illogical and risky plan.</p> | <p>Regarding the quality of recycled water, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir.</p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>With regard to the viability of sea tankering, this option is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP824   | <p>We are responding to the consultation on the Southern Water (SW) revised draft Water Resources Management Plan (WRMP).</p> <p>Having carefully considered the Plan and reviewed additional information provided by other parties we make this strong personal appeal that the WRMP should be firmly rejected by Defra as unfit for purpose. SW should be directed to go back and start again and review all options for</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. This process does not allow companies to choose to start again if not directed to do so</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>improving water availability in the future in a thorough, non-biased manner to produce a Plan that takes full advantage of all the rain that falls freely from the sky in a cost effective and environmentally-friendly manner. Our fourteen key concerns and arguments for this rejection of the WRMP are as follows.</p> <p>1. The WRMP was not properly re-done as Defra directed when it previously rejected it some years ago and SW have persisted in delivering the most expensive infrastructure option possible in terms of both construction and operating costs plus the fact that it will be by far the most environmentally damaging option. The proposed Hampshire WT&amp;WR Scheme, together with those similar effluent recycling schemes in the IOW and in West Sussex have been chosen as priority by SW because they can charge their customers much more for big infrastructure schemes than other workstreams such as leakage repair. They have clearly done everything they can to maximise the arguments in favour of this scheme to the detriment of investigating and bringing forward promptly other schemes that can make a difference at a lower cost to consumers, many of whom are already cash-strapped with the various demands made on them. It is unacceptable that the pursuit of high profit should override the delivery of a basket of lower cost options that will be better for consumers in terms of increased cost to them and better for the environment by far through not having high energy (carbon) and chemical demands and increased toxicity of waste water discharged to Langstone Harbour and The Solent.</p> <p>2. SW have failed to address Demand Management with sufficient urgency. They need to educate households and non-household organisations as to how they can reduce their usage of water and push forward their installation of smart water meters asap. It is a medical maxim that 'prevention is better than cure' and it should be a water maxim that 'reducing demand is better than spending much money on increasing availability'. As a household we persistently manage on 90 litres per person per day, well below the current UK average of nearly 140l/p/d and we do this by just using water sensibly, showering not bathing and never using a hose. By explaining to people how to reduce use (with the carrot that bills can reduce or at the very least not rise nearly so much) demand could be lowered by up to 25% we suspect. Reducing daily usage to only 110l/p/d by only 2045 is not demanding enough and both the Government and SW should do much more than this. Education and associated technical assistance to non-household customers can also make a huge difference as SW have already demonstrated. At Annex 14 section 2.4.2 SW reported on a school water audit in Hampshire where, by working with the school, they enabled them to save 3 million litres a year and halve their water bill. This should be a high priority now to address potential water deficiencies and would be very good for the environment and to reduce costs incurred by non-household customers.</p> <p>3. SW has failed to apply enough effort to reduce water wastage by fixing leaks from the mains at a much higher rate than at present, using both local repairs and mains replacement at a swifter pace. SW currently loses around 100 million litres of water per day that has been treated for customer use, enough to supply around 750,000 customers their needs every day at current average rates of water use. That is a shocking waste of customers money and the effort spent in producing the potable water. There is insufficient urgency shown in the Plan to address this disgraceful waste. The Plan shows that a high level of effort will only be applied after 2035, the due date for delivery of the Hampshire WT&amp;WR Scheme. As with other low effort on demand management and introducing better cumulative options this seems quite simply a ruse</p> | <p>by the Secretary of State. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by the Defra and our regulators. We will continue to do so.</p> <p>1. Regarding the need for a new consultation, we consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our rdWRMP24 in 2024.</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value.</p> <p>Despite having one of the lowest PCC in the country, we have an ambitious demand management programme. We are aiming to reduce PCC to 110l/h/d under dry year conditions by 2045. This is 5 years ahead of the 2050 target date set by the Government. By 2050, our PCC will be lower than 110l/h/d. Our water efficiency plan includes helping non-household customers reduce their consumption through smart metering and water audits as well as a collaborative fund to promote water efficiency. Our home visits programme and schools programme are specifically targeted at raising awareness about water use and providing helpful tips on reducing water consumption in homes. In AMP8 we will be building a Water Calculator to help educate customers on their own water use and provide useful practical advice on how to save water.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>to make have the WT&amp;WR Scheme the only viable option before 2035 and thus get it approved. Even by 2050 they will only have halved the loss meaning that customers will still pay to have 50 million litres per day treated that will then be lost to the ground. It is both reprehensible and absurd that Southern Water plans to spend vast sums creating water from sewage effluent whilst abjectly failing to address the huge losses from its network. This is unacceptable practice and must be addressed by Defra as a matter of urgency.</p> <p>4. SW has failed to bring forward some quick wins to improve water availability. Moving the [REDACTED] abstraction to the tidal limit on the River Itchen would be a better, more robust and sustainable solution to protect the whole of the freshwater catchment and enable natural flows down the river to be sustained in a drought. Other abstraction points on rivers could be similarly moved such as on the Adur and the Test. Also, the River Test Managed Aquifer Recharge Scheme (MARS) should be brought forward.</p> <p>5. SW are not urgently investigating and bringing forward new reservoir and other aquifer-based storage schemes. The UK receives a huge amount of freely given rainfall yet only traps 1-2% of what hits the ground with the rest being lost out to sea. That is so wasteful and this country, blessed with its prevailing south westerly winds off the warming Atlantic, should be making far more use of this freely given water and storing it wherever possible. While there is a capital and energy cost to developing new storage sites, once built they cost far less to run than an effluent recycling scheme that has to run every day of the year pumping water many miles, even in prolonged periods of wet weather. Reservoirs offer far more than just water supply; they help reduce flooding, provide recreational spaces, boost biodiversity, and act as buffers against the significant and worsening impact of climate change.</p> <p>6. SW are using the most pessimistic assumptions regarding population growth (23%) in its area for the period 2025-2050, considerably more than in the last Plan, even though the industry regulator Ofwat has confirmed they can use the much lower ONS population growth figures of 16%. They have also assumed no abstraction at all on the Rivers Itchen and Rother, not even in winter when river levels are high or even in flood, going beyond the required reductions. Assuming too high a level of population growth and deliberately cutting abstraction by more than is required clearly inflates the need for more water unnecessarily, thus making the case for developing the most expensive option of effluent recycling. This is effectively setting the conditions to make the effluent recycling scheme fit the requirement and justify it over other, smaller options that cumulatively would deliver the same effect of ensuring water is available to the required amount.</p> <p>7. SW has made it very difficult to obtain detailed information and data on the options that it has looked at and has failed to be open and transparent with the public and representative organisations. Throughout the consultation it has failed to consult properly with the public and not shown any clear evidence of thoroughly considering all the options available in an unbiased manner. Importantly, SW did not follow the legal requirement for a new statutory consultation on their plan when there was a material change to the option(s) selected in 2021, when both the [REDACTED] desalination scheme and the WRMP19 back-up option of discharging recycled effluent to the River Itchen were rejected. When there was a material change to the plan in 2021 SW should have undertaken a comprehensive review of all the available options and followed that with a full public consultation. That did not happen. Too much has been hidden because SW realise that their Plan is full of contradictions and inadequate reasons for</p> | <p>Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>2. For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>The government has set a 25 Year Environment Plan target of 75% of waters to be close to their natural state. Abstraction reform plays a key part in this plan. Sustainable water abstraction is essential to ensure that river flows and groundwater levels support ecology and natural resilience. Since 2008 the Environment Agency has made changes to over 270 abstraction licences to prevent over 30 billion litres of water per year being removed from the environment where abstraction is unsustainable.</p> <p>Water companies, through their WRMPs, need to plan for future deficits in supply generated by reductions in abstraction licences. Through the Water Industry National Environment Programme (WINEP), studies and investigations are ongoing to understand the environmental impact of our current licences. Any future licence changes are informed by the conclusions of these WINEP environmental studies.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>not taking forward better, more cost-effective options to address potential (not certain) water shortages. Documents critical to understanding and evaluating the options available have not been made available to the public. Instead, SW have classified the Options Appraisal and key environmental assessment reports as restricted. It seems there are more documents restricted in 2024 than there were in 2022 and many view this as a deliberate ploy to hide important information. As SW know it is unlikely that customers will be prepared to travel to their Worthing HQ to view these large reports, that cannot be properly reviewed in one visit, they can keep secret information that could be prejudicial to them pursuing their preferred option. Other water companies have made this information more accessible. Those documents that are accessible are very large and repetitive and fail to provide important information. Lacking knowledge of the water industry, most customers struggle to get to the heart of what is proposed. Again, this appears to support the view of many that SW, having fixed on a very expensive solution, does not want it derailed by informed objection.</p> <p>8. No work is taking place to ensure the alternative Hampshire effluent recycling option using [REDACTED] and a bespoke environmental buffer lake are advanced as a back-up, despite this work having been allocated funding by Ofwat. Defra should insist that this work be done. Nor is there any reference to further investigation of a combined Portswood &amp; [REDACTED] scheme, which was previously indicated to be feasible with those sites closer to where the water is needed. It is very concerning that SW shows no interest in progressing these options to establish which would be the best solution with least environmental impact. It would seem that this work would be less costly and therefore not enable SW to get as much profit from customers charges, even though as a recycling option it would be better for the environment. SW has already admitted they have not fully investigated or modelled the implications of their chosen approach to fill the chalk aquifer-fed reservoir with recycled effluent, raising serious questions about their decision-making process.</p> <p>9. Customers and others have no trust in SW's ability to provide water to the correct standard through the recycling process because of their poor track record of using traditional infrastructure, as seen with WTW failures at [REDACTED] and [REDACTED] pollution incidents and other problems. Most of these are persistent human error but also poor maintenance. What certainty is there that the Company can operate the complex advanced effluent recycling treatment technology without incident, particularly if they try and do it on the cheap to save expenditure and increase profit? The new reverse osmosis process has not been used successfully before in the UK and requires to be carefully monitored and controlled. If polluted water enters the Havant Thicket Reservoir from a failure at the recycling plant it will devalue the water already there and result in further issues and concerns re water quality. Many customers have said that they will not trust tap water should this scheme be implemented and thus turn to bottled water, with the attendant large increase in plastic use and waste. This is just the opposite of what is required for the future. Also, SW appears to mislead the public by referencing eight global regions using effluent recycling for drinking water. In truth, only five of these employ the Reverse Osmosis process proposed for Havant and just one of those five discharges treated water into a reservoir—a truly flimsy and misleading precedent for their plans. Most schemes use underground aquifers with long retention times, a far less disruptive and more proven approach. Most of the recycled water in these eight areas is not used for</p> | <p>Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>3. Work formally paused on investigating and developing Fareham Wastewater Treatment Works as a back-up option in May 2023, in agreement with RAPID, and so we have not developed it to the same level as HWTWRP. This involved transfer of recycled water from a water recycling plant to Itchen WSW via an environmental buffer. Desalination options were removed from further consideration at this stage. The outcome of the options appraisal process was supported by RAPID at Gate 2. Although both HWTWRP and the Back Up option were able to meet requirements of supplying 75ML/d in the Western Area (as required by WRMP19), and were able to meet the identified future need of up to 90ML/d, HWTWRP presented significantly better value for customers and was better able to meet long-term regional supply requirements due to improved adaptability. Therefore, the focus was on progressing HWTWRP as the selected option.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 2 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP24 in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>human consumption but for municipal, industrial and farming purposes adding further to the deception.</p> <p>10. The proposed Hampshire WT&amp;WR Scheme will cost a great deal to construct (£1.2 billion and rising at present) and operate all year round (£3 million and more per annum). All this will be a financial burden to many cash-strapped householders. It will also be environmentally costly. That such a scheme should be put forward to address a very rare long drought in several hundred years is unbelievable. It should be noted that, with the cost of the Havant Thicket Reservoir being about £350M to build, SW could build another 3 reservoirs for the price of the Hampshire WT&amp;WR Scheme and have much cheaper running costs thereafter. SW's plans clearly prioritise their profits over environmental impact. It is evident that alternative, much more environmentally sustainable solutions for securing additional water have been sidelined or delayed to ensure that recycling sewage effluent becomes the favoured option. This approach is driven by the substantial profits, estimated at £45M that Southern Water stands to gain from effluent recycling, far exceeding the financial returns from other methods. We noted SW's recent credit rating downgrade to ""Junk"" status by Moody's and this will make any borrowing much more expensive. They will need to reconsider their strategy as greater credit costs will significantly increase their expenses beyond what was originally planned.</p> <p>11. Examining SW's Plan's Environmental Impact tables show that:</p> <ul style="list-style-type: none"> <li>The Havant and Littlehampton effluent recycling schemes have the highest NEGATIVE environmental impact score of any of the options considered, and yet they are the preferred options.</li> <li>The effluent recycling schemes to be developed by 2035 each have a higher carbon impact than the transfer of water from Norway by a fleet of eight sea tankers and yet all of these options are preferred to any others.</li> <li>The proposal to transfer water from Norway via eight sea tankers is utterly implausible with no dedicated berths at Southampton Docks, the water's high acidity would require extensive new treatment facilities, and a costly, long pipeline would be needed. This idea seems more like a deliberately unviable option to make effluent recycling appear more reasonable by comparison.</li> </ul> <p>12. SW recently trialled reverse osmosis plants in Havant [REDACTED] and also in [REDACTED] but the results were deeply concerning and cast serious doubt on the technology proposed for full-scale deployment. The trial equipment evidently failed to remove unexpected contaminants and even introduced new pollutants into the output water. Southern Water claims the full-scale technology will differ, raising the critical question: why wasn't the trial conducted with a more representative system to ensure its ability to deliver pure, contaminant-free water? DEFRA should demand answers, as the trial data - FOI delayed for over 12 months, reveals alarming findings. Some of these were:</p> <ol style="list-style-type: none"> <li>Bacteria found in output water despite expectations of complete removal.</li> <li>Total dissolved solids found in levels above zero, contrary to expectation.</li> <li>Heavy metals including arsenic, lead, salt and strontium found in the output water.</li> <li>Traces of 'Forever Chemicals' were detected in some samples.</li> <li>Volatile Organic Compounds including toluene and xylene were found in the treated water.</li> <li>Significant levels of personal care products were found in the output water.</li> </ol> | <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. We need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. We have excluded options in cases where drawbacks outweigh benefits or where the environmental challenges cannot be satisfactorily overcome.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Regarding the suggestion that three reservoirs could be built for the cost of Broadmarsh ERP, no detail is provided on proposed locations, capacities and volumes that could be reliably obtained. Therefore, we are unable to comment on the relative merits of HWTWRP compared to these schemes.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------- |           | <p>All of these will end up in the reservoir and pollute the water entirely unnecessarily, causing further problems at water treatment plants. In addition, there was no testing for microplastic/nano plastics and no consideration given to the impact of tankered industrial waste with unknown constituents at [REDACTED] WwTW. While engineers can be trained, they are operating within a finance-driven culture that pares essential maintenance expenditure to the bone. Can a company which appears to operate a 'fix on failure' attitude to its essential plant and pipeline network be up to the task of maintaining and operating the complex technology required for reverse osmosis when we know from other operators the technology is very difficult to maintain? With membranes being extremely expensive will they actually replace them soon enough when they start to degrade?</p> <p>13. The SW proposal to continue to rely on, and extend the use of, the Candover Drought Option (augmentation boreholes) and drought permits (Technical Report page 138-139) should not be permitted beyond 2030. The plan extends their use up to 2034. Instead, SW should use the next 5 years to bring forward more quickly the sustainable options. Also, SW should not be allowed to continue to use drought options/orders while they just wait for the Hampshire effluent recycling/ transfer scheme to be delivered, as it is inevitable that the recycling scheme will be delayed further and will not be available in 2035.</p> <p>14. The strong concentrate waste water that will be the result of the effluent treatment process at the proposed Broadmarsh plant will be discharged back into the local waters with a very considerable adverse effect on the water around the discharge point. This discharge will be toxic to the environment and when there is little water coming from the sewerage system in drier conditions the concentrate won't even be partially diluted by the land water. The adverse impact on the environment could be massive and is yet undetermined by thorough research. This is yet another reason why the Hampshire WT&amp;WR Scheme should be cancelled and the whole WRMP be sent back to SW to be redeveloped to more environmentally sustainable solutions.</p> <p>Conclusion</p> <p>The SW draft revised WRMP is a document designed to push forward and gain approval for the most expensive large infrastructure projects possible, namely effluent recycling at Havant (Hampshire WT&amp;WR Scheme), Sandown IOW) and [REDACTED] (West Sussex) while at a much lower priority taking slowly forward better options that would obviate the use of the aforementioned 3 schemes. If this WRMP is approved customers will be paying large bills for decades to cover the huge building and operating costs of each WT&amp;WR scheme and the environment will suffer greatly from the high use of energy and chemicals, the discharge of toxic wastewater into the local waters and the greatly increased use of bottled water with the resultant need to deal with all the plastic that results. We strongly urge Defra both to reject the SW revised draft WRMP as being unfit for implementation and to direct the Company to investigate and bring forward the cheaper and more practical options discussed above."</p> | <p>All of the hormones tested in the trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>It is our desire to 'avoid' use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP825   | <p>In regard to the proposed plan you add recycled water into the thicket reservoir, I am strongly against this as I do not believe that the high standard required will be met on a permanent basis.</p> <p>As is known that southern water DO NOT undertake comprehensive clean water standards, they cannot be relied upon to keep the reservoir clear of dirty/ sewage water in the future.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback. We note the objection to the use of recycled water in Havant Thicket.</p> <p>The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. The water at customers' taps will continue to meet strict drinking water quality standards and</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP826   | <p>I am writing to express my concerns about Southern Water's proposals for recycling treated sewage into our water supply.</p> <p>I am a Portsmouth Water customer, and was very supportive of their proposal to create the Thicket reservoir that would have both stored clean water and provided a much needed recreational amenity. However allowing Southern Water to use it to store recycled water will destroy the amenity, and contaminate our supply.</p> <p>I also live on Chichester Harbour and was horrified by the findings of the recent research demonstrating how polluted it is, including pharmaceuticals, and that this is largely due to Southern Water's discharges into the Harbour. We need assurances that this will not get worse with their proposals.</p> <p>I do not know enough about the financial implications of Southern Water's proposals, but, based on their past record, I suspect that they have been chosen as the most profitable option for their shareholders, rather than in the best interests of their customers and the environment.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |
| WRMP827   | <p>I am strongly against Southern Water's proposals to mix potentially contaminated water with the very clean fresh water derived from the local chalk streams and aquifers.</p> <p>The physical interference with the local collection areas could be disastrous and pollute the collection of clean water.</p> <p>The scheme requires enormous energy supplies to install, run and pump the water which are not/will not be available in a net zero carbon emission situation.</p> <p>Other storage solutions, including more reservoirs, should be considered, as well as eliminating distribution losses, before forcing re-cycled effluent as public drinking water.</p> <p>The way sewage is handled at the moment illustrates how the assurances of Southern Water are meaningless. They should not be allowed anywhere near our clean water supplies with recycled effluent.</p>                                                                                                                                                                                                 | <p>Thank you for reviewing our rdWRMP24 and providing feedback. Your objection to the use of recycled water in Havant Thicket has been noted.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. In this instance, this new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding effects of recycled water on the chemistry of Havant Thicket reservoir, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> |
| WRMP828   | <p>The Southern Water effluent recycling via Havant Thicket plan doesn't make sense environmentally or financially. We are asking you to reject these proposals and force Southern Water to investigate more sustainable and cheaper alternatives.</p> <p>Climate change means we are getting more rainfall and this is predicted to increase further. Rainwater needs to be seen as a valuable resource and stored in reservoirs for use in dry periods. A combination of smaller local reservoirs, aquifer storage and catchment management would give more flexible and sustainable responses to water needs.</p> <p>Southern Water needs to reduce the water lost to leaks, currently 20%. Their plan to address leaks needs to be far more ambitious, and this would make a significant difference to the amount of water needed.</p> <p>Urgent action is needed to protect the Rivers Test and Itchen and to reduce the volume of water abstracted. A relatively simple measure would be to move all abstractions to the bottom of the catchments.</p> <p>It seems quite wrong that Southern Water is favouring a scheme which is so expensive and has so many adverse environmental effects without investigating the obvious alternatives. The effluent recycling scheme would operate all the time, irrespective of whether there is a drought,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations).</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each</p>                                                                                                                                                                                                                                                                                                 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

-------------------------------------------------------------------------|
|           | <p>consuming energy, creating greenhouse gasses, using chemicals and further damaging marine life.</p> <p>The obvious conclusion must be that Southern Water and its main owner Macquarie are acting only for profit rather than for the benefit of the customer or the need to care for the environment. That this situation can even arise is of great concern. Water companies are natural monopolies and should be compelled to operate in a sustainable way for the benefit of water users and without damage to the environment. We hope that the government will recognise the need to protect the consumer and the environment rather than the interests of shareholders.</p> <p>As Southern Water customers, we have been shocked at how little information we have been given about this. Nothing about these plans has come in the post, and we only found out about the scheme via resident groups. When we attempted to object on the Southern Water website in August this year, we were told that the consultation period had already ended and our objections would not be taken into account. We trust our views will be taken into account on this occasion.</p> <p>We hope you will also remember the shocking record Southern Water has for discharging untreated sewage into bathing water around the coast. As residents of Hayling Island, we have been particularly badly affected in Langstone Harbour, the location of the [REDACTED] treatment plant (and location of the proposed effluent recycling process), where untreated discharges continue to occur regularly, most recently two days ago.</p> <p>We are hopeful that you will be able to address our concerns and take action to look after water users and the environment.</p> | <p>successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>The Havant Water Recycling Treatment Plant (HWTWRP) scheme is designed to provide water resources during severe and extreme droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex. A consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. |           |          | <p>Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. We have received 1,176 responses as part of rdWRMP24 consultation.</p> <p>Thank you for reviewing our rdWRMP24 and providing feedback. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October–November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35–40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; <i>The Guardian</i> and the <i>Financial Times</i>. We produced both targeted and non-targeted adverts on social media. The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid</p> |

|           |          | <p>to previous shareholders.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact, etc., in addition to capital and operating costs. The selection of the Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11 km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations).</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community-level initiatives.</p> |

| WRMP831   | <p>I am writing to express my concerns about the Southern Water plans for Water Resource Management. There are many reasons why I oppose this plan however I will focus on two that cause me the most concern.</p> <p>Firstly the loss of water due to leakage. Currently I understand that Southern Water loses 100 million litres of water every day to leaks. This is 19% of all the water abstracted from the environment. There is a programme to address this, but this seems slow and insufficient. Whilst addressing leaks would not completely solve the problem of clean water, put together with other initiatives and water saving plans, it would seem a better and more environmentally friendly alternative to the proposed sewage recycling plan.</p> <p>Secondly, the Southern water plan to build the recycling plant more than 40km from where the recycled water is needed is not a sustainable solution. I understand that the treatment plant will need to run 365 days a year irrespective of the rain fall levels, which seems an expensive and poor use of energy.</p> <p>There are a number of environmental objections to this proposed scheme (e.g. the environmental impact of concentrated reject water discharging into the Solent). The Southern Water plan has not properly taken into account the environmental impact and will be detrimental to the environment and the health of the planet. I therefore urge you to turn down this Water Resource Management plan and ask Southern Water to devise a more environmentally sound project.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |
| WRMP832   | <p>Dear Sir/Madam</p> <p>I do not support southern waters plans for thicket reservoir and associated effluent recycling proposals.</p> <p>There are many reasons but the chief are:</p> <p>1 as we only capture 1% of rainfall this plan is shortsighted and unambitious. We should be climate proofing all major utilities and that includes capital investment to capture more rain</p> <p>2 I do not trust the water company's decision on effluent recycling proposals. It's not been done before , untested in the uk and will lead to a massive rise in the number of people that use plastic bottled water . And Langston harbour will deteriorate.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>3 southern water is awful at communication and consultation. There is no trust in them and so none for their proposals. There is little accountability .</p> <p>So it's up to defra to stand up for present and future generations of consumers and send these plans back so that better decisions can be made.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |
| WRMP833   | <p>I would like to make the following points:</p> <ol style="list-style-type: none"> <li>1. Southern Water only collects 1% of rainfall. With climate change, winter rainfall will increase, so Southern Water should make the most of this free and natural resource, by storing it in new reservoirs and aquifers across its area.</li> <li>2. Southern Water lose 100 million litres of water every day, either before it reaches the treatment works, or a further 19% that customers pay to treat. SW need to increase significantly their water main replacement rate to reduce this loss.</li> <li>3. Southern Water have an unenviable reputation of effluent spillages and leakages using normal traditional infrastructure. As such, it is not possible to have any confidence in them to use advanced effluent recycling treatment technology without mishap. This would cause further damage to Langstone Harbour and the Solent and other areas.</li> <li>4. There has been a complete lack of information from Southern Water: why haven't they informed customers, who would be the future consumers, instead of trying to go behind our backs? Absolutely no public consultation.</li> <li>5. The creation of the chalk spring fed reservoir at Havant thicket was a unique biodiversity opportunity, but Southern Water now plan to completely ruin that.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>6. Why is the recycling plant being built so far (40km) from where the water is needed at [REDACTED] It will be expensive to build and energy costs to transport the water this considerable distance every day of the year will be huge.</p> <p>7. Southern Water need a more sustainable plan. Why opt for the most expensive option, other than that it will give them the most future profit, at the unnecessary expense of their captive customers.</p> | <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Using Havant Thicket reservoir to store purified recycled water</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> |
| WRMP835   | <p>I am writing to express my concern about Southern Water's proposed "reverse osmosis" plan for [REDACTED] and Havant Thicket reservoir.</p> <p>Southern Water has a very poor record of polluting Langstone Harbour, where I live, and of presenting unhelpful data about their activities. Overflow into the harbour is supposed to happen in exceptional storm conditions, but we have seen it happen in dry weather. I do not believe we can trust them with a new, untested in the UK, technology to produce water fit for human consumption.</p> <p>There are still millions of litres of clean water lost through leakage in the pipe network which has not been well maintained: who says the new plant would be any better maintained? Why not stop the leakage, and build new reservoirs, rather than planning to import water from Norway, with a huge carbon footprint and increased pollution.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | I feel this needs proper public consultation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="http://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Sea tankering from Norway is no longer included in our plan.</p> |
| WRMP836   | <p>Please register my objection to the proposed plans for Havant Thicket by Southern Water.</p> <p>It would seem logical and sensible to first focus on reducing the huge daily wastage of water lost to leaks in their system.</p> <p>Having said that, I also object to the proposed recycling of waste water from the sewage plant back into the reservoir - who thinks these things up?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP837   | <p>I wish to register my opposition to Southern Water's plans to use Havant Thicket Reservoir as temporary storage for partially treated sewage.</p> <p>I am a local resident who supported the construction of a new reservoir, despite the damage to existing wildlife habitats, on the basis that it would provide new high quality wetland habitat. I would not have supported this had I known that treated sewage would be discharged into it. I am also a customer of Portsmouth Water so would be an unwilling recipient of water 'purified' through the proposed treatment methods.</p> <p>My main concerns are:</p> <ol style="list-style-type: none"> <li>1. Sustainability. In view of the challenges posed by climate change, Southern Water should adopt a more forward-thinking approach and develop schemes which focus on harvesting our plentiful, and increasing, winter rainfall. This could dovetail with other pressing needs to respond to flooding risks and to provide natural habitats for our threatened wildlife. Additionally, Southern Water could move its abstraction sites further downstream to avoid unnecessary environmental damage to our rivers and streams.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p>                                                                                    |

|           | <p>2. Fix and maintain the current system. Southern Water loses millions of litres of water to leakage every day. They should take better care of our scarce resources before they get permission for costly and carbon-intensive new infrastructure projects.</p> <p>3. Unnecessary, risky, and costly over-engineering. Southern Water's poor record on treatment plant and pumping station failures is well known, as is their history of prosecutions for pollution incidents. There is little in Southern Water's past record to reassure anyone of their competence in safely operating this new and complex technology, without unacceptable interruption of water supply or pollution to important local habitats.</p> <p>4. In whose interest? This project seems to have been designed to make the most of the funding mechanisms to maximise profits for shareholders. I hope DEFRA will ensure that any water harvesting and treatment schemes put people and the environment ahead of shareholders' interests.</p> <p>Your faithfully</p> | <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| WRMP840   | <p>We are extremely concerned about Southern Water's revised draft Water Resources Management Plan which is open for consultation until tomorrow. We feel that it puts profit before local people and the environment.</p> <p>We also feel that there has been inadequate publicity and consultation about Southern Water's plan.</p> <p>We've got five major concerns, based on research that we have been carrying out.</p> <p>1) Southern Water's plan is taking us down the wrong path<br/>In planning a £1.2 billion scheme to recycle treated waste water into Havant Thicket Reservoir, along with 3 other recycling schemes, Southern Water is taking us down the wrong path.</p> <p>We need a plan that focuses on developing more sustainable solutions first, that work with climate change to collect the forecast increase in winter rainfall and store it in new reservoirs and confined aquifers for use in dry summers. We get plenty of free rain but only collect 1% of rainfall in the UK. Collecting and storing more water in winter would also provide multiple benefits to society, helping to reduce the forecast increase in flooding, provide recreational sites for our communities, and provide biodiversity opportunities if we build more reservoirs.</p> <p>2) Southern Water need to be far more ambitious on leakage reduction</p> <p>Southern Water need to have a much more ambitious programme of action to reduce leakage, 3% of water Southern Water take from the environment is lost before it even reaches the treatment works, then a further 19% of water that customers have paid to treat is currently lost to leakage in the distribution network, that's more than 100 million litres of precious water lost every day. Southern Water must be required to deliver a much faster programme of renewing water mains to replace their ageing pipe network, or they will never get leakage under control. Having a replacement rate of just 1 in 1000 years when a water main is only designed to last 120 years is just unacceptable.</p> <p>3) As Southern Water cannot be trusted to operate &amp; maintain its current traditional infrastructure without causing pollution, what hope is there of it safely operating the complex advanced effluent recycling treatment technology without incident?</p> <p>How can we trust Southern Water with the complex technology required to treat final sewage effluent, which has not been used for this purpose before in the UK? Southern Water have a very poor track record of treatment plant and pumping station failures; there have been many prosecutions for pollution incidents and failure to take prompt action to rectify problems. The risk of pollution to the Havant Thicket Reservoir as well as damage to Langstone Harbour and the Solent is unacceptable.</p> <p>4) Southern Water need to do more to protect the environment, and develop a strategy that helps them honour their commitment to be carbon neutral by 2030.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>Our river catchments could be protected much more quickly if they moved river abstractions closer to the tidal limit, and abstraction boreholes down the catchment, reducing the priority for abstraction reform which is driving the need for effluent recycling.</p> <p>Storage options need to be developed closer to where the water is needed, so that long pipelines that damage our countryside and wildlife are not required.</p> <p>Options need to be developed that do not have such a high carbon and emissions footprint. We need a strategy that prioritises low energy solutions, the energy alone for the Hampshire scheme will cost more than £3 million/year. With pumping and treatment needed 365 days a year, even though effluent recycling was selected as a drought resource.</p> <p>5) The risks from developing the effluent recycling plant on a landfill are unacceptably high</p> <p>If despite all of the concerns about whether effluent recycling is needed, the significant environmental impacts, and the enormous costs to build &amp; operate are to be ignored, Southern Water are to go ahead with their leaky plan, they must be told to find an alternative site for the recycling plant at Havant. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great.</p> <p>What is to be done?</p> <p>We would like express to you our deep concerns over the integrity of the future of their drinking water and we request the appropriate authorities to consent to the following action:</p> <ul style="list-style-type: none"> <li>• To carry out and publish an in-depth independent review of the entire proposed infrastructure by independent qualified professionals in this field.</li> <li>• To carry out and publish an in-depth independent review of the ability for SW's recycling engineering to satisfactorily cleanse the recycled effluent removing all known chemical pollutants and pharmaceutical contaminants by independent specialists in this field.</li> <li>• To carry out and publish an in-depth independent review of the costings of all the proposed infrastructure, pipes, pumping stations, etc. by independent financial advisers.</li> <li>• To carry out a costing analysis of the ongoing maintenance required for a project that will be required to run daily all year round and not just in drought conditions and to forecast the life time of such a project.</li> <li>• To carry out an independent review of the state of the infill-site at Broadmarsh which will be cut open to enable all the 45kms of piping required to transfer the water to the [REDACTED] pumping station and beyond.</li> <li>• To carry out and publish an in-depth independent forecast of the chemical and health impacts the opening of this infill site will have on the harbour and communities.</li> </ul> <p>We look forward to hearing from you.</p> | <p>the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Our regulators the EA, NE and Ofwat are independent from Southern Water and they undertake an analysis of our plan. Their analysis looks at all aspects of the plan, including the options and risks. Our SoR shows the feedback we received from these regulators and how we have responded to it. The options and risks are assessed independently by the Regulators Alliance for Progressing Infrastructure Development (RAPID), a partnership made up of the three water regulators, Ofwat, the Environment Agency and the Drinking Water Inspectorate through a Gated Process, and by the Environment Agency, Natural England and Defra through the WRMP process.</p> <p>Southern Water is working with international experts, other UK water companies and regulators to understand and manage the complex operation and maintenance of a reverse osmosis plant. The plant would follow international best-practice treatment and maintenance regimes, be operated by specialists and overseen by water industry regulators. Monitoring and regulation of releases to the environment would be undertaken by the Environment Agency.</p> <p>We are working with WRSE in response to the EA is recommendation 3 and further to other regulatory discussions and we have asked WRSE to commission an independent review of the options we have in the Western area. Specifically, this project will review the WRMP14 and WRMP19 list of options and the gate 1 submission. This review should see if there are any other short-term solutions that could be developed instead of using drought orders / permits on the Test and Itchen. which will be focussed towards seeing if there are any other short-term and medium-term solutions that could be developed instead of using drought orders / permits in the Western area. We anticipate this work to be completed in around summer 2025, following which we will discuss this with our regulators and incorporate as appropriate into the WRMP annual process and as we start to prepare for WRMP29.</p> |
| WRMP842   | Dear Sirs,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>I wish to register my serious concerns over Southern Water's Draft Water Resources Management Plan. I request that DEFRA reject Southern Water's plan and require them to submit a modified and more sustainable proposal.</p> <p>I have many areas of concern. Some of the most important for the proposals in Hampshire are:</p> <ol style="list-style-type: none"> <li>1. The huge carbon and energy cost of the project. In both the construction and operational stages of the project, these are unacceptably large compared to all alternatives. It seems unacceptable that to address water requirements for a 1 in 500 year drought provision, Southern Water proposes a scheme requiring continuous water recycling and pumping. The energy requirements for operating the water recycling processes and long-distance pumping on a scale of 30 ML every day are unacceptably large. It appears that further energy will be squandered every day by pumping this water to and from the Havant Thicket Reservoir as an environmental buffer. It seems most unlikely that net zero could ever be achieved in its operations by the company.</li> <li>2. Alternatives have been ignored or dismissed unreasonably. More emphasis should be placed on reducing leakage in the water supply network and restricting water usage by the public. More sustainable options have been ignored, such as moving the abstraction points further down the Rivers Test and Itchen, making greater use of existing rainwater by constructing additional winter storage reservoirs and/or making greater use of aquifer storage. Even if wastewater recycling were to be considered to be necessary, considerable reductions in cost and energy consumption could be achieved by using the output of waste water treatment plants closer to the areas where the potable water is needed, e.g. by utilising the output from the [REDACTED] WWTW or Winchester WWTW.</li> <li>3. I am most concerned at the environmental damage that would be caused by routing a major pipeline for more than 40 km across southern Hampshire. Habitat connectivity would be disrupted in the long term by cutting a 50 m swathe through hedges and tree lines. Good connectivity is essential for many protected species, including rare bats, that are unable to cross such wide habitat gaps. Disruption on this scale implies loss of alternative routes. Adequate hedgerow and tree restoration would take decades to become effective. Furthermore, I am most sympathetic to the disruption and loss that the pipeline route would cause to landowners. While I am keen to avoid water abstraction from chalk streams such as the Rivers Test and Itchen, that does not justify extensive habitat destruction elsewhere. I note that the Southern Water proposal does not refer to reduction of water abstraction from the catchments of other chalk streams such as the Rivers Meon and Ems.</li> <li>4. Danger of environmental contamination. The site at Broadmarsh, Havant that is being proposed for the recycling plant is unstable contaminated reclaimed land. Disturbance of this for pipelines and buildings risks contamination of groundwater and Langstone Harbour.</li> </ol> | <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>All water companies in England and Wales are required to plan for a drought of a 1-in-500 year severity. This requirement is set by the government, not by water companies. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <ol style="list-style-type: none"> <li>1. Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated except if the land is needed permanently for environmental mitigation or for other uses. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. For more details on the environmental impacts of our WRMP please refer to the updated Annexes 17, 18 and 19 of our fdWRMP24. These annexes contain the SEA, HRA and WFD assessments respectively.</li> </ol> |

|           | <p>5. I am concerned at the lack of assessment of the environmental impacts of the discharge of the reject stream from the recycling process via the long sea outfall from [REDACTED] into the Solent. For example, the discharge is likely to contain anti-fouling treatments used for maintenance of the reverse osmosis membranes and other unassessed chemicals.</p> <p>6. Southern Water have demonstrated that they are unable to operate a wastewater recycling plant to an acceptable standard.</p> <p>In January 2023, I toured the pilot recycling plant that was operated by Southern Water at [REDACTED] in Havant and have subsequently examined the report on its operation (Lab_data_summary_26Aug24_[REDACTED] (002) redacted.xlsx) that was released recently. I have a good understanding of the scientific principles involved and am most concerned at the poor standard of many parameters of the product stream listed as [REDACTED] Pilot UVAOP effluent'. Most strikingly, in the Biological Indicator category, unacceptable levels of bacteria were present, including non-lactose fermenting bacteria and Pseudomonas aeruginosa. As the membrane systems should be designed to retain much smaller particles, this data suggests total failure of the processing.</p> | <p>Building on former landfill sites is not unusual. When done with proper management and compliance with regulations and ensuring environmental safeguards are in place building on former landfill sites is both feasible and safe and is increasingly an important tool in sustainable development,</p> <p>Southern Water has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill, including in respect of piling down to chalk. Works interacting with the landfill are expected to require an environmental permit, which provides an additional layer of protection and control in relation to those works.</p> <p>We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main report to the statement of response.</p> <p>All of the hormones tested in the trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> |
| WRMP843   | <p>This response is purely concerned with Southern Water's proposal to recycle effluent from [REDACTED] Sewage Works and use the Havant Thicket Reservoir as a 'buffer lake.' It is this aspect of Southern Water's plan which is of most concern to local residents.</p> <p>Overall view</p> <p>The original planning consent at Havant Thicket was for Portsmouth Water to provide a unique chalk-spring-fed reservoir. Despite widespread concern at the environmental damage caused by construction of a reservoir, it was generally accepted locally. SW now proposes to mix the spring water with recycled effluent from [REDACTED] Sewage Works. This very significant change in the role of the reservoir is unacceptable except as a very last resort. The recycling scheme should not be approved by the Secretary of State until all other options have been fully explored.</p> <p>Specific comments</p>                                                                                                                                                                                                                                                                                                                                                                              | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>With regard to planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO application will seek to change the operational use of the reservoir and related works so that they can store and convey the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>We are disappointed that SW is promoting such an expensive solution to the predicted need for extra water, involving major new infrastructure and heavy use of chemicals in the reverse osmosis process. We are not convinced that alternative, less ambitious and more sustainable, solutions have been properly explored. These could include storage options such as more small reservoirs, aquifers, wetlands, tanks and butts. Dispersed storage would place supply closer to demand and reduce the need for such a massive pipework network.</p> <p>We are concerned that the effect of recycled effluent on biodiversity in the reservoir has not yet been fully understood. The same appears to be true for the effect of the piling for installation of the recycling plant on a derelict industrial landfill site, and the concentrated discharges from the recycling plant into the heavily protected Solent.</p> <p>The proposal risks turning people away from tap water towards bottled water due to the lack of trust in the water companies – SW in particular – creating a new plastic bottle mountain, especially as mixed reservoir water will taste different to spring water.</p> <p>As customers of Portsmouth Water, Emsworth residents will receive water from the reservoir in times of drought or emergency, with more routine supply planned after 2040. It is unacceptable that all parties affected have not been contacted directly as part of this consultation.</p> | <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. As part of our drive to encourage more storage of rainwater locally and close to where it falls we have set up the <a href="#">Clean Rivers and Seas Task Force - Southern Water</a></p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. Regarding effects of recycled water on local ecology, purified recycled water is extremely clean. Water quality in Havant Thicket reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. Regarding accumulation of substances in Havant Thicket reservoir sediments, the advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including “forever chemicals” in the purified recycled water produced.</p> <p>We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions. In AMP8 we are investing £90m on natural solutions, including habitat and biodiversity improvements, reduced risk of spread of invasive non-native species, in river enhancements, catchment management with the agricultural sector and Catchment Partnerships, chalk stream enhancement and SSSI management. This is a long term programme that started in AMP6, and natural solutions are embedded in our long term delivery plans.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                          | <p>landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">customers: https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP844   | <p>We definitely disagree with the proposals in Southern Water's plans for the next five years.</p> <p>Southern Water made a material change in their plans from desalination to effluent recycling since the last plan was issued but they did not carry out a full review or undertake a statutory consultation. This, together with limited consultation, is really unacceptable.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>There are a range of issues which need addressing: pollution in our rivers and harbours, flood risks, leaking pipes, over extraction from our precious chalk streams and over consumption of water generally.</p> <p>These require an overall plan which is based on sustainability and protection of the environment. We do not need expensive solutions like water recycling; there are plenty of other options which work with nature and do not threaten our local waterways.</p> <p>Southern Water's current plans are both expensive and carbon intensive and do not offer the kind of protection we would expect to see for our local environment.</p> <p>At the moment, our water is wasted both by leaking pipes and failure to store winter rain. It is also wasted because people are not encouraged to save water. Smart meters and better use of grey water would both prevent the need for expensive solutions like the plans for water recycling.</p> <p>We recognise that there may be times when water is in short supply but really believe that a better option is storing winter rainfall which is predicted to increase according to most climate scientists.</p> <p>We believe that most winter rain is wasted at present and also that Southern Water is over estimating its projection of population growth and these figures need careful monitoring.</p> <p>We currently only collect about 1% of the rain which falls in the UK and this could be stored in ways that would prevent flooding. Also, at the moment Southern Water's record on reducing leakage is poor and needs to be much more ambitious. More than 100 million litres of water are lost every day and they should be delivering a much faster program of renewing pipe networks. Having a replacement rate of just one in 1,000 years when the water main is only designed to last a hundred and twenty years is unacceptable.</p> <p>We are particularly opposed to the plans for water recycling at Broadmarsh in Havant for the following reasons:</p> <ol style="list-style-type: none"> <li>1. This is an unnecessarily expensive and carbon intensive project. It would be much cheaper to look at ways of storing winter rainfall. The predicted cost is £1.2b and this money could be much better spent. We also need a strategy which prioritizes low energy solutions. The energy alone for the Hampshire scheme will cost more than £3 million a year to run and then pipe the water to [REDACTED]. This is surely an unnecessarily expensive drought resource.</li> <li>2. The nature of the reverse osmosis process means that it is required to run continuously. In Havant's case this will produce 30 Mld of water 365 days a year to avoid damage to membranes pipes and pumps. Many people have grave concerns about Southern Water's ability to maintain this without causing pollution.</li> <li>3. This plan will have negative environmental impacts around Langstone Harbour, the Solent, Havant Thicket Reservoir and the pipeline route. We are particularly concerned about the waste</li> </ol> | <p>Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:</p> <p><a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">customers: https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Regarding population growth, for dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>material from the treatment process being discharged into the sea with its likely concentration of pesticides, pharmaceuticals, forever chemicals and chemical disinfection products.</p> <p>4. It seems that no independent monitoring of the discharge into the reservoir is planned.</p> <p>5. We are losing a unique biodiversity opportunity to create a chalk spring fed Reservoir which is what local people were promised when the Havant Thicket Reservoir was approved</p> <p>6. The proposed site at Broadmarsh is on a landfill site, full of contaminants and very close to the sea. The plant will require deep piling and tunnelling and is so is likely to release toxic leachate into the harbour. It will also have a significant of visual impact on the coast.</p> <p>7. We do not understand why the option of recycling effluent at [REDACTED] has been shelved. As this would be nearer to where the water is needed.</p> <p>8. Southern Water seems not to have considered (or put forward to the Environment Agency), alternatives like winter storage. A full review of options should be a matter of urgency. Solutions like small storage areas and moving abstraction from the chalk streams to near the tidal limit could be implemented very rapidly. So could the construction of new reservoirs such as the river Adur offline reservoir in West Sussex</p> <p>9. Not only were alternative schemes not considered but Southern Water unnecessary withheld 12 volumes from public view so we have been unable to see useful details on options appraising and environmental assessments.</p> <p>10. We are concerned about the cost of the water recycling process and the effect on consumer bills. We are told that the recycling scheme alone will deliver a profit of about 45 million pounds to Southern Water. This kind of profiteering at the expense of customers is unacceptable.</p> <p>11. We are also concerned about the quality of the water we will be expected to drink. We fear that many people will refuse to drink tap water and we will be presented with even greater problems from plastic bottles.</p> <p>12. We also find it hard to understand the need for this water. Havant Thicket Reservoir is designed to cope with a 1 in 200 year drought (which has not yet occurred) and so surely other measures like reducing use per head, storing rain and fixing leaks would give a good safety margin</p> <p>As a group, we are strongly hoping that these misguided plans will not be allowed to go ahead.</p> | <p>us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>1. Points 1,2. Water recycling inevitably uses more energy and is subsequently more costly to operate than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>2. Point 3. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Point 4. The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>Point 5. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>3. Point 6. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques</p> |

|-----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Point 7. Work formally paused on investigating and developing Fareham Wastewater Treatment Works as a back-up option in May 2023, in agreement with RAPID, and so we have not developed it to the same level as HWTWRP. A Back Up option was also identified. This involved transfer of recycled water from a water recycling plant to Itchen WSW via an environmental buffer. Desalination options were removed from further consideration at this stage. The outcome of the options appraisal process was supported by RAPID at Gate 2. Although both HWTWRP and the Back Up option were able to meet requirements of supplying 75Ml/d in the Western Area (as required by WRMP19), and were able to meet the identified future need of up to 90Ml/d, HWTWRP presented significantly better value for customers and was better able to meet long-term regional supply requirements due to improved adaptability. Therefore, the focus was on progressing HWTWRP as the selected option.</p> <p>4. Point 8. Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>5. Point 9. Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are</p> |

|-----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>6. Point 10. The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well. Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>7. Point 11. Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a>. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Point 12. All water companies in England and Wales are required to plan for a drought of a 1-in-500 year severity. This requirement is set by the government, not by water companies. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| WRMP845   | <p>For the attention of DEFRA</p> <p>I am writing to object to Southern Water's revised draft Water Resources Management Plan for the following reasons: -</p> <p>It is inconceivable to me that Southern Water (SW) should consider mixing recycled effluent with the chalk spring supplying the Havant Thicket reservoir. Why should customers be forced to: -</p> <ul style="list-style-type: none"> <li>• Drink this product?</li> <li>• Pay the additional costs of building a complex high-risk system and the costs to run it?</li> </ul> <p>This project is supposed to be a drought resource which would only be needed in times of extreme water shortage. However, to maintain readiness for an emergency the pipes and filter membranes will have to operate continuously every day at the optimal operating condition. To do this SW will need to process and pump around it's system a volume equivalent of 12 Olympic size pools of water a day. It is understood the energy cost alone would be £3 million pounds per year in a normal year (i.e. not in a drought).</p> <p>Despite the complexity of the new treatment process, which is new to the UK, and the risks to the reservoir if SW fail to maintain the treatment plant, no independent monitoring is proposed.</p> <p>Money invested in effluent recycling becomes redundant when the plant comes to the end of its life in approximately 60 years time. Upgrades and replacement of electrical &amp; mechanical plant are needed every 10 to 20 years. Whereas a winter water storage solution, such as a reservoir, works with climate change and will still be in there in 200 years time. A reservoir solution also provides better value for money and more environmental benefits, as well as potential benefits to reduce winter flooding.</p> <p>I have concerns about the impact of more concentrated reject water from the effluent recycling process being discharged in to the Solent via the existing Eastney Long Sea Outfall. The SW assessment indicates a 'likely significant effect' in their Preliminary Environmental Information Report published with the consultation.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We consider all options as part of our options appraisal process. The scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <ul style="list-style-type: none"> <li>- The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</li> <li>- The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</li> </ul> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter. Water recycling inevitably uses more energy and is subsequently more expensive to operate than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water. The water recycling plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>Also I am concerned at the significant risk of leachate and landfill gas being mobilised by piling and tunnelling, required to build the recycling plant, through the waste into the chalk aquifer below – groundwater flow in the aquifer is to the south (i.e. flowing towards Langstone Harbour).</p> <p>It is a retrograde step to drive people away from tap water to bottled water. In California and Singapore water recycling is used and many people have changed to using bottled water.</p> <p>SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Their slow programme for improvements means even by 2050 they will still be leaking about 10% of all the water they treat, including the new water manufactured at huge cost from their planned new effluent recycling scheme.</p> <p>The company is allowed to make a profit from building the new infrastructure. There is real concern that rejection and selection of water resource options is being driven by the search for profit, as the current funding mechanism incentivises water companies to develop infrastructure heavy solutions like effluent recycling, which allow them to make more profit, rather than developing more sustainable solutions.</p> <p>SW should actively investigate more viable alternative solutions. England receives plentiful rainfall and SW should consider storing this in additional reservoirs which would cost less to build, less to maintain, uses low risk technology and have a lifetime of hundreds of years.</p> <p>This proposal by SW is indicative of a company driven by profit with no regard to how it treats its' customers, the environment, or future generations.</p> <p>Regards</p> | <p>treatable parameters. The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>A Water Recycling Plant would be typically expected to last 60 plus years but have a number of upgrades every 10-20 years of the electrical and mechanical plant.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We note your concerns about the reject water and A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP846   | <p>Objections to Southern Water Resources Management Plan Consultation (Southern Water)</p> <p>Dear Sir, This letter contains our objections to Southern Water's recycling treated effluent proposals. This is a money-making scheme for a private company that, if you agree to it in any shape or form, will make the UK Government, funded by the tax-payer and UK water consumers, a 'cash cow' for Southern Water and its owners. Please do not accept the company's bogus claims that we need this grossly expensive project. For brevity's sake we have selected those objections that, for us, are the most outrageous.</p> <p>1. It is untrue that UK's southern region is facing drought conditions and shocking that Southern Water uses this in its public literature in order to justify its plans. As outdoor enthusiasts, for decades we have always monitored the weather systems; in our respective lifetimes in this country if there are any noticeable weather changes these are towards increasingly wetter and more violent weather events. The UK's Met Office, which has behaved more reliably than most if not all of England's now notorious private water companies, reports that the UK is getting more rain on average over the year, and 5 of the 10 wettest 21st UK years since 1836 have occurred in the century; climate scientists acknowledge that this is caused by the now recognized climate change reality. Is Defra aware that only 1% of UK rainfall is harvested? So why did our elected Governments' regulatory body, Defra, not act from the outset of privatisation in 1989 to enforce Southern Water to address the network's infrastructure requirements, namely pipe repair or replacement, work for which the company had been paid handsomely at the outset of privatisation to undertake? On this topic is Defra aware that over 100 million litres of our valuable water is lost daily because of Southern Water's leaky pipework that even water inspectors, over decades, have reported is neither repaired nor replaced. Does Defra not know that Southern Water's replacement plan of 1 in a 1000 years, when a water main is designed to last 120 years, is simply unacceptable? Why was Southern Water not monitored so as to ensure the use of consumers' payments to carry out this essential work? Instead, journalists have publicly flagged up the company's continued profiteering for its staff</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="#">here</a>.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>and shareholders. As an ordinary citizen I don't expect bonuses or profits whilst a company's essential investments need to be made. Yet Ofwat's web page claims that a "regulatory framework was put in place with the goal of ensuring customers receive high standards of service at a fair price". In that case, Ofwat has signally failed to comply with that framework: unfortunately we cannot trust such a "regulator" to regulate Southern Water and it follows that we certainly can't expect that company to undertake the even more sophisticated project of recycling treated effluent. Highly relevant to that point is that the public also routinely suffer failing pumping stations under Southern Water's management, for which sometimes 20 lorry-loads of effluent must be driven along our roads – for which we also pay taxes – for disposal. We all know that Southern Water uses our shoreline as its own toilet because it has also failed to keep up with the population growth at any stage by also failing to build increased sewage holding tanks. Of course that would deprive its shareholders and CEOs of profit. As stated, our "regulatory bodies" don't do their job of holding Southern Water to account. It is supremely ironic not to mention insulting to the general public's level of intelligence that Southern Water propose building a highly complex pipework, which we are supposed to trust them not only to tunnel and build correctly, but also to maintain! Given their track record this is the height of absurdity and, if it gets through, our Government will be a laughing stock and the target of yet more 'enterprising' international asset companies. The public cynically realise that this is precisely why Southern Water bosses have succeeded in claiming 'national infrastructure need': by this means they jump local authority's – and its public's – scrutiny. But it's still our money and our lives will be at risk.</p> <p>2. Please uphold your Government's claims to seek environmental and truly cost-effective and genuinely sustainable solutions for the UK. Storage options must and can be developed far more cheaply, quickly and economically. One example: there are already natural aquifers in our region which will store precious rainwater. So doing prioritises low energy, reduced carbon and emissions for our country. The company's shareholders are not those whose families also live here: we must protect Havant's vital numerous natural springs which constantly feed us, our streams and rivers. Southern Water must not be allowed anywhere near them or we will lose one of our region's irreplaceable assets: or perhaps the company hopes its pipework will actually permanently damage our natural springs – leaving us at the mercy of ever spiralling water costs which the Government, through the consumer, must endlessly pay shareholders. Did you know that this Hampshire and Littlehampton effluent recycling schemes have the highest environmental impact score of any of the options considered yet not publicised? We trust that you know that 3 new reservoirs, a proven environmental development that will last for generations, can be built in our region for the current £350 million cost of the treated effluent scheme: of course we all know that the latter's cost will rise exponentially and, together with any/all problems along the way, simply require the guarantor Government and its tax-payers to pay for. We cannot trust Southern Water and we've bailed them out too many times. Even Moody's recently declared Southern Water's loan as 'junk'. The Government must cut its losses and not service Macquarie, the majority shareholder, which may do for the company, once this plan is put through, what it did for Thames Water: and the public definitely won't forget who signed it off. We know that the Government has guaranteed a 3.75% return on the capital</p> | <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the pursuit of profit, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding the suggestion that three reservoirs could be built for the cost of Broadmarsh ERP, no detail is provided on proposed locations, capacities and volumes that could be reliably obtained. Therefore, we are unable to comment on the relative merits of HWTWRP compared to these schemes.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>expenditure investment so the company can make £45 million out of it – at our expense for this totally unnecessary and environmentally damaging project.</p> <p>3. Southern Water must also protect our rivers. This can quickly be done by moving abstraction boreholes down the catchment, and river abstractions closer to the tidal limit. It is not true that the treated effluent plan will reduce the need for river abstraction – the company must be challenged by you the regulator together with the Government, to make such changes now. For an example, the United Kingdom Technical Advisory Group Report on Environmental Standards and Conditions (2008), would allow up to 50% of the 95 percentile flow to be taken from the tidal limit. This is a far more cost-effective, earlier, practica approach. We absolutely must stop rewarding water companies for abusing our natural water systems whether fresh water or marine.</p> <p>4. Another blatant absurdity is the plan to build any industrial plant, particularly this plan's, on a 13 metre deep, old, contaminated landfill site, immediately adjacent to Langstone Harbour whose environmental and ecological value are internationally recognized as needing protection. It beggars belief that Southern Water has so little regard for Langstone Harbour and the public and wildlife who use and cherish it, that our harbour - and probably also Chichester Harbour into which Langstone Harbour flows - will be the ongoing and endless recipient of whatever contaminants leach out of the site following the company's securing the plant on the landfill. Let's not pretend that we trust Southern Water to prevent this from happening. Southern Water also plan to extend its new pipework from [REDACTED] and thence through Havant's underground channels miles to the new Havant Thicket reservoir, which was never intended to take Southern Water's treated effluent; that treatment entirely dependent on a non-stop – i.e. regardless of ongoing or heavy rainfall - filtering through membranes that must be maintained 24/7, 365 days/year. This cost alone without inflation will cost £3 million. If this company cannot even be bothered to repair/maintain existing basic pipework, how will it manage this level of sophistication? The effluent must flow and how long before it escapes en route to the reservoir as a pipe fractures, membranes break up, mounting costs cause the public to refuse payments? Will the Government, the tax-payer have to clean up? What of the natural springs, damaged by this subterranean pipework, they will be irreparable. Is Defra aware of Langstone and Chichester Harbours' international and national accolades for their natural – not man-made – properties that are of huge ecological and environmental value to all our wildlife and seas? It is impossible for Southern Water to maintain any credibility of environmental respect whilst continually discharging not only sewage, as a direct result of its failure to build additional sewage holding tanks, but also inevitably leaching highly polluting contaminants into those harbours as a direct result of building on the landfill site on Broadmarsh, the site of a Coastal Park no less. This is a further example of this company's cavalier attitude to England's irreplaceable natural habitat and ecology.</p> <p>5. Open criticism of Southern Water's absurd scheme appears to have made it suggest a fall-back positio in the event that its elaborate plans in any way fail. England, internationally recognized as a wet country that experiences regular wet weather, would become the recipient of water tankers from Norway if Southern Water's plans are botched or fail and our natural</p> | <p>the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced. No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales.</p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Sea tankering from Norway is no longer included in our plan.</p> |

|           | <p>water courses damaged. Surely there can be no reason whatsoever for such a hopelessly conceived plan. Our Government cannot allow it on the basis of its unenvironmental cost alone, quite apart from the untruth that we need its plan as told by Southern Water, and its shocking neglect of its duties to date.</p> <p>6. It is also interesting to note that Southern Water's own acknowledgement that this scheme is used in Singapore and California fails to also make clear that its product, the treated effluent water, is then used in industrial manufacturing. The public, and perhaps the Government too, are not being told the full story; as with any major public relations exercise, we are being sold what the beneficiaries want us to believe namely that which is in their interests and not ours. It is also worth pointing out that we cannot even manage our nation's own mounting waste, particularly plastics which are permanently polluting our own waters and marine life on which we depend. If the public vote with their feet and turn their back on drinking treated effluent by buying endless plastic bottled water, who will be the losers? The Government needs to take a robust stance towards this completely unnecessary but hugely expensive project that we might assume stems from an Asset Management driven Southern Water. Please put our national resources, including our people, first. We neither want nor, importantly, need this dangerous scheme. Instead, please urgently require Southern Water to use known sustainable methods of water collection, abstraction and use. Please reject permanently Southern Water's treated effluent schemes.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP847   | <p>Re : SOUTHERN WATER WRMP</p> <p style="text-align: right;">Date 3 Dec 2024</p> <p>Dear Sir</p> <p>With ref to the Southern Water WRMP with Hampshire Water Transfer and Water Recycling Project</p> <p>To the best of my knowledge my comments on the above are as follow:-</p> <p>In the Havant and surrounding area, our drinking water is supply from Portsmouth Water and it comes from two sources, approx.85% comes directly from groundwater source i.e. boreholes or springs, with the remaining 15% being derived from the River Itchen - itself being groundwater fed. The water is classed as " good quality " therefore requiring only minimal low cost conventional treatment and pumping costs.</p> <p>Some years ago, due to predicted increase in population (and now also climate change), a reservoir was planned, permission given by Havant BC, and constructed now started by and on land owned by Southern Water, for the Havant Thicket Reservoir at Rowlands Castle.</p> <p>I am lead to believe that the original design and intent, was for the reservoir to receive and for storage of "good quality" excess water from ground water sources, especially in the winter, which would other wise flow into the sea. The water would be drawn from the reservoir, treated</p>                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With regard to planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a></p> <p>All water companies in England and Wales are required to plan for a drought of a 1-in-500 year severity. This requirement is set by the government, not by water companies.</p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>and pumped into supply in peak demands periods and the summer for the local area, using only minimal low cost conventional treatments and pumping costs. This original scheme would have also reduced water abstraction from the River Itchen . The water demand in the area would also be reduced further by installing water meters for customers and reducing leaks.</p> <p>However the Southern Water proposal now is to also feed treated effluent from Havant Sewage Treatment Works "toilet-to-tap" systems to the Havant Thicket Reservoir.</p> <p>The justification given, that the additional water can also serve other supply areas e.g. to [REDACTED] etc.</p> <p>This "toilet-to-tap" systems proposal will involve additional treatment and transfer pumping costs with possible drinking water quality issues for customers.</p> <p>Apparently due to the very high cost of the recycled water process, it has only been used in countries with very low rain fall, that have areas that have severe drought, or the risk of loss of all their water sources.</p> <p>Recycled water to provide drinking water has been used in Singapore, Namibia, Australia and several locations in the USA. The UK is not classed as having a low rain fall and has in fact been experiencing higher than average with flooding. To the best of my knowledge there is no need for, and no actual "toilet-to-tap"schemes that supply domestic customers in the UK.</p> <p>The recycled water process proposed is a complex high cost treatment process requiring all associated ICA ,Telemetry, SCAD and standby systems, to meet and maintain the required water and safety standards.</p> <p>All civil structures including flood defences, infrastructure, process plant and pumping stations have a very high initial, operating, repair and replacement cost.</p> <p>Whole Life Costing for the proposed scheme with any alternative options e.g storage, boreholes etc in the [REDACTED] area etc, do not appear to have been provided for comparison or to substantiate the scheme.</p> <p>Conclusions</p> <p>To the best of my knowledge and information available my conclusions are :-</p> <ol style="list-style-type: none"> <li>1. There are no Water Companies in the UK that use direct "toilet-to-tap"schemes to supply domestic customers in the UK.</li> <li>2. The quality of water supplied to Portsmouth water customers will change from "good quality" raw water with simple well established treatment and disinfection.</li> </ol> | <p>are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>We have not conducted a HAZOP on this design as it was a reference design with the aim to use data generated from the pilot trial to assess the footprint of the full scale plant. HAZOP studies are not used for blending different water types. We have however assessed our design using the Structured What-If Technique (SWIFT) to ensure we had included the required number of process units, including redundancy, in case of operational challenges. The SWIFT exercise uses all the general principles that underpin a HAZOP study and is used when a design is at a preliminary stage. A HAZOP is generally conducted at the detailed design stage to ensure the appropriate number of process units, fail safe systems and controls are included to run the asset. This will be required to be conducted by the competitively appointed provider (CAP) of the project. Specifically to the blending of different types of water, we have used a water quality model to ascertain that the resultant water quality is not corrosive to the distribution network downstream.</p> <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>With regard to effects of long term consumption, Southern Water must comply with stringent standards established by our regulators which take such evidence into account, the Drinking Water Inspectorate (DWI) would be able to provide further detail. For more information about the DWI and how it regulates the quality of drinking water, please visit the government website <a href="https://dwi.gov.uk/">https://dwi.gov.uk/</a></p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing HWTWRP, which will be highest in the first half of AMP8.</p> |

|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>To a “poor quality” raw water with complex treatment with unconventional disinfectant .</p> <p>Then blending with an unknown ratio of “good quality” raw water, with further treatment. It is not know if a hazard and operability study (HAZOP) has been carried out.</p> <p>3. The effect of long term consumption of effluent recycled water is unknown</p> <p>4. Whole Life Costing for the proposed scheme and any alternative options for comparison is unknown.</p> <p>5. What has been proposed, is that customers bills will increase to finance the scheme, with an indication of the rise of the average water bill in the first year, from £111 to £129 (excluding inflation) and would then remain high .</p> <p>From the above I do not support the Southern Water WRMP with the Hampshire Water Transfer and Water Recycling Project. I believe that this project should be scrapped and revert back to the original design and intent of the Havant Thicket Reservoir at Rowlands Castle.</p> <p>On any scheme for peaks demands, water meter should be the first considered with provision of local storage and boreholes, to avoid high transfer pumping costs.</p> <p>Kind regards</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WRMP848   | <p>Attention: DEFRA's Consultation on the Hampshire Water Transfer and Water Recycling Project</p> <p>We at SOSCA wish to express our very strongly held objections to the whole of this project. It is a most unnecessary, unsustainable, environmentally damaging, extremely costly, scheme that has many defects, viz:</p> <p>Lack of TRUST on many levels -</p> <p>In the skill set ability of Southern Water to monitor and maintain a hugely costly, complicated, energy demanding, environmentally damaging, infrastructure project of ‘reverse osmosis’ that has never been used before in the UK to provide its customers with the crucial life sustaining product of their drinking water.</p> <p>Despite Southern Water's corporate declarations of protecting the environment here are some examples that illustrate the opposite:</p> <ul style="list-style-type: none"> <li>• It was fined £126 million in 2019 for unlawful discharges</li> <li>• It was fined £91 million in fines for widespread pollution after pleading guilty to 51 offences in 2021</li> </ul>                                                                                                                          | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers. <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <ul style="list-style-type: none"> <li>It was fined £330,000 for faulty equipment of a pumping station that killed 2000 fish in 2024</li> <li>It was fined £31.9 million as a performance penalty for 2024</li> </ul> <p>Part of the huge costly infrastructure requires that an old infill site at Broadmarsh will require the drilling for tunnel shafts and laying of huge pipes which will impact the following:</p> <ul style="list-style-type: none"> <li>This site has no engineered foundations.</li> <li>Has been poorly monitored.</li> <li>Is abutting the shoreline of Langstone Harbour with which is already suffering from coastal erosion.</li> <li>Will leach highly toxic chemicals directly into the protected Harbour.</li> <li>Will emit methane across a densely populated industrial site.</li> <li>Has no published policy in the disposal of the contents of the site</li> <li>And sits upon a Flood Zone</li> </ul> <p>Damage to the ENVIRONMENT</p> <p>This infrastructure requires several new pumping stations. And yet there were serious failures at [REDACTED] and Hardam that required the distribution of bottled water to the communities. There were recent trials of 'reverse osmosis' held at Havant and [REDACTED] the results of which raised serious doubts on the ability of Southern Water to remove unexpected contaminants.</p> <p>The research into the trials produced a long list of failed contaminants.</p> <p>There also appeared to be no testing for Micro and Nano plastics. A huge concern for not only the health of the entire customer base but also for the wider ecological world.</p> <p>It appears, though kept from the public domain, that the effluent recycling trials at Sandown failed to comply with the Water Framework Directive.</p> <p>The recycling schemes at Havant and Littlehampton have the highest NEGATIVE environment impact scores of any other options considered.</p> <p>Environment Agency: "Southern Water has a responsibility to operate in accordance with permit conditions and protect against serious pollution. In its deliberate, widespread and repeated offending, it has failed the environment."</p> <p>Southern Water was considered one of the worst performers for the fourth year in a row for customer satisfaction.....</p> <p>Sec of State, Steve Reed: "on years of pollution and underinvestment leaving our waterways in a perilous state. The public deserves better."</p> <p>Lack of corporate diligence in researching ALTERNATIVE methods which would cancel the necessity for this hugely expensive recycling project</p> <p>8.4 trillion litres of water fall every year across the customer base of Southern Water and Portsmouth Water. Yet these companies treat and supply just 242 billion litres annually, using only 2.8% of available rainfall. Climate agencies forecast our winters to grow wetter which will make the UK even richer in rainwater. The obvious course of action is STORAGE and to HALT LEAKAGE</p> | <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Regarding the suggestion that several reservoirs could be built for the cost of Broadmarsh ERP, no detail is provided on proposed locations, capacities and volumes that could be reliably obtained. Therefore, we are unable to comment on the relative merits of HWTWRP compared to these schemes.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <ul style="list-style-type: none"> <li>More than 100 million litres of precious water is lost every day by Southern Water</li> <li>Why should there be any necessity for Southern Water to use and undermine the spring fed new Thicket Reservoir</li> <li>Why has Southern Water ignored the possibilities of storing excess rainfall in aquifers</li> <li>Why has Southern Water because it failed to think ahead and invest in new reservoirs even considering the take over of Portsmouth Water's corporate investment.</li> <li>Why does Southern Water not prioritise the reduction of leakage from pipes which could reach a 50% reduction by 2040 instead of their declared plans to cut just 53% by 2050. (Whilst most of the present pipes are old they could be reused by the insertion of sleeves).</li> <li>Why does Southern Water continue the abstraction and damage to our nationally fragile chalk streams by not abstracting from nearer the tidal limit.</li> <li>Why has Southern Water not invested in forms of underground storage.</li> </ul> <p>The final FINANCIAL COSTING for the entire project is UNSUSTAINABLE and UNNECESSARY</p> <p>The basic product of this industry is rainwater - which is FREE. When the companies were privatised they were debt free.</p> <ul style="list-style-type: none"> <li>Havant Thicket Reservoir already has planning permission and is being constructed for approximately £350 million</li> <li>Southern Water could build 16 aquifer storage schemes for approximately £374.56 million</li> <li>Southern Water have quoted a price of £1.2 billion for this infrastructure and with piping costs would come to £1.4billion.</li> <li>Southern Water could build several reservoirs for the cost of this first level of forecast figures</li> <li>This costing is unrealistic because it is taken from today's pricing whereas they ignore the costs which they would incur in the future when a) they actually commence work and b) their year on year maintenance costs and c) for any malfunctions.</li> </ul> <p>Macquarie own Southern Water, they were the owners of Thames Water during its demise. Neither company had any debt in 2017.</p> <p>Moody's have now classified their bonds as 'junk' leaving their 4 billion loan requirement at a 10% interest rate.</p> <p>Servicing this debt would be close to 50% of their revenue.</p> <p>The current Ofwat rules would also guarantee SW a return on investment of approximately £45million on their £1.2billion proposed investment of the reservoir which is the driving force thus neutralising the very genuine and moral concerns expressed by the public. .</p> <p>There should be an independent cost analysis of this entire project and compared against the alternatives.</p> | <p>challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>Notwithstanding the fact that these 16 schemes are not explicitly identified in this query, there is little benefit in developing 16 schemes by the 2030s when the three schemes we are progressing will deliver the over twice the volume over a similar timeframe. We did not simply reject schemes because they could not be delivered by 2035. Only the schemes that were considered to mitigate the use of drought permits and orders beyond 2030 had to meet the criterion of being deliverable by 2030, because schemes delivered after 2030 would not be able to mitigate the reliance on drought permits and orders beyond 2030.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties</p> |

|           | <p>The corporate culture at Southern Water continues to concern its customer base with its claims and actions</p> <p>The key promotional point that Southern Water uses to advance its argument for the 'reverse osmosis' process is that it is used widely across several countries which is actually spurious and unsubstantiated. When in fact:</p> <ul style="list-style-type: none"> <li>• The main usage is for industrial and farming industries</li> <li>• The claim it is for human consumption is not verified.</li> <li>• The countries where it is used the communities resort to bottled water</li> <li>• They conducted public consultations where their format for questions were geared towards favourable responses which were false but which they then proclaimed as 'widely held support' for this project.</li> <li>• They did not inform or engage right across the Portsmouth Water customer base to engage with them in these consultations.</li> <li>• Their statistics for population growth are puzzling and geared towards a favourable outcome for their project.</li> <li>• It has ignored the engagement of its customer base over alternative solutions by declaring the 'reverse osmosis' as the 'preferred option' as if it were a foregone conclusion.</li> <li>• They claim that the customer consultations view effluent recycling comparable to storage in aquifers.</li> </ul> <p>It is difficult to equate one of the Prime Minister's 5 national missions, - 'to make Britain a clean energy superpower with zero carbon electricity by 2030, and accelerating our journey to net zero' – when the energy requirements year on year for this project together with its carbon emissions will far exceed the government's mission statement.</p> <p>It is time this entire project was researched by independent consultants with their results made available to the public and for them to provide an honest Cost Benefit Analysis.</p> | <p>and business counts. Following the publication of latest WRP in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> |
| WRMP849   | <p>Dear Defra,</p> <p>I am writing to you to request that you again reject the new plans of Southern Water , particularly the plans that include recycling effluent in providing a water supply to their customers , This would include me as both a Portsmouth Water and Southern Water customer. The plan seems a rehash of their previous plan and does not tackle the real concerns of the people of this area.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>I personally believe that Southern Water are again prioritising profit in their plans rather than turning around the serious quality issues they have shown to have currently.</p> <p>I also believe their plans include 'tankering' around considerable amounts of water to ensure an adequate supply which surely must strike anyone as a less-than-ideal solution. Particularly when trying to minimise environmental impacts, Surely this aspect must be a test of Southern Water's plans.</p> <p>In the UK there is a well-known lack of building for the future; while profiting in the current and I can see just more of this in future if no one takes proper charge of the strategies employed here.</p> <p>Surely instead of using effluents, rainwater, which we get in plentiful supply, would be a far better solution.</p> <p>Again, our current incumbents have not invested enough in building reservoirs or tackling wastewater effectively in our aging infrastructure.</p> <p>This all shouts to me a lack of leadership at both these companies and worryingly, in our own government and regulator. Why do I say that ?, Southern Water has repeatedly presented this appalling plan over a significant period of time, and it is yet to be fully rejected despite plenty of objections from our local folks. Are we to be ignored in the striving for profit ? . Surely with the new government and a more balanced view of what is important here will prevail and if the companies do not do the right thing, then Defra should consider significant action to protect all UK supplies from these grubby companies. Allowing these companies to continue making the rules is not working.</p> <p>This is hugely important for our futures and monetising our water supply is simply the wrong thing to continue. Let's take it back and make it better.</p> <p>Yours sincerely,</p> | <p>can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |
| WRMP850   | <p>To all concerned,</p> <p>Please add my household to the list of concerned residents about Southern Waters proposal for Effluent Water Recycling in the Havant Area.</p> <p>We have plenty of rainfall and local springs to draw from and should not require this extreme technology in a country such as ours. I have family in Greece where it is regularly near 40c and they manage effectively, why can't we?</p> <p>I do not trust Southern Water with this technology given their poor track record. As a regular cold water swimmer I used to use the BeachBuoy app to identify when there has been a</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           | <p>sewage discharge. Unfortunately along this stretch of cost this is such a regular occurrence that I have now abandoned my swimming here, it seems that they just don't care.</p> <p>During the consultation in the Meridian Centre a few months ago I raised that the design of the pipe systems needs to be so that it is physically impossible for any raw sewage to end up in the new Havant Thicket reservoir. Again, I do not trust Southern Water to make that happen given the regular spillages into the sea.</p>                                                                                                                                                                                                                                                                                                                                                                                                        | <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Reservoirs are a good method of capturing rainfall and/or spring water however, require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |
| WRMP851   | <p>Dear Sir or Madam,</p> <p>I would like to express my opposition to the proposal by Southern Water to use reverse osmosis as a means to supplement the new Havant Thicket reservoir. This country receives plenty of rainfall and only a fraction of it is used for drinking water. The capital and running costs of the project will be huge, not to mention the energy needed to operate the RO plant. There must be a better way to provide the future reliability of drinking water that we need.</p> <p>Yours sincerely</p>                                                                                                                                                                                                                                                                                                                                                                                                  | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Our supply area is classed as being under 'serious water stress' by the Environment Agency.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p>                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP852   | <p>SOUTHERN WATER EFFLUENT RECYCLING PROJECT</p> <p>I object to the entire concept of what Southern Water are proposing on the following grounds: I am appalled by the obvious financial gains the company will accrue as a result of this project and bearing in mind who own SW now and watching the fall of Thames Water, I feel aggrieved that the same fate of asset stripping is being virtually forced on our water supplies in Hampshire and Surrey. Profits are being removed to shareholders while the system is falling apart and even their proposed solution will benefit shareholders to the detriment of consumers. My grounds for objection go far beyond the obvious financial gains for SW, although that in itself is abhorrent considering the appalling track record of maintenance that SW carry out on their supply chain. The environmental damage that could ensue and will continue under these plans</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>is unforgivable in this day and age and no company should be allowed the power to withhold, change or subvert any surveys, studies or information that may not fall in the desired direction that company wants to achieve. The fact that SW did not carry out a full review of its options as 'a full re-appraisal exercise was not considered time or cost beneficial' speaks volumes and the fact that they have suppressed 12 volumes of the project from public access online shows they have information that could compromise their case and therefore needs to be kept to minimum access(in person only at SW HQ).</p> <p>I therefore list my more detailed objections here. I may not have fully listed everything, but make no mistake, I object to the whole proposal and support the rejection of this project as it stands. SW should be legislated to provide a full environmental assessment which could be independently verified for accuracy and include alternatives which are completed fully. SW should be directed to commence any works already authorised that are being held back currently which are not connected to the project currently.</p> <p>Currently it seems only about 1% of rainwater is being collected for use across the UK. With the levels of rainfall experienced countrywide, SW should be looking at sustainable solutions that work alongside climate change. To this end, why have SW completely disregarded the aquifer storage sites in Hampshire and probably West Sussex that have already been identified, along with burying these options in their vast number of files. This option should be investigated as a priority and indeed Dorset are already running aquifer storage successfully so not a million miles away is the proof it works.</p> <p>The rivers are suffering lack of water, why are the borehole abstraction sites not being moved further downstream in the rivers? Research shows this would have an almost immediate beneficial effect as the levels would rise. Siting these near tidal limits would ensure full access without any impact further upstream. SW know this but have chosen not to even look at this, alongside the option of storage reservoirs for the Hamble, Wallington and Adur which have not been prioritised. The Test aquifer is now mooted for 2041/42. Why the delay? These storage solutions are clearly a way forward, yet SW are passing over these options totally. SW should be looking at winter gain, summer use, sites across the whole area that they cover. They have stated they will look at these options (but not until after their intended plan is accepted). This is not just about the effluent scheme, it is a massive issue when it appears a private company can obliterate and bury any environmental concerns without any regard for the real owners of the land, ie us, the people on the ground. The company don't own the water, this is a public service and should be scrutinised to within an inch of its life to ensure VFM and sustainability is being achieved. Plus, this is a once in a lifetime opportunity to get it right for the foreseeable future.</p> <p>SW have pushed back on any aquifer works or studies for the ten years 2025 to 2035. That will ensure when the time comes for a final Development Consent Order, SW will truthfully state there is no other option. And sadly, this will be true as they are stalling all upcoming projects to push through their masterplan to eventually provide recycled effluent water to everybody regardless of where you live. This must not be allowed, and SW must carry on with proposed projects such as prioritising leak repairs. Currently SW lose 19% of all treated water via leakage in their distribution system. They also lose a further 3.2% of the water before it even reaches their plant for processing. If this work was prioritised and completed, they could achieve a 50%</p> | <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>reduction to these figures by 2040 and 70% by 2050 but instead they are only aiming for a 53% reduction in total across the board by 2050 which is unacceptable.</p> <p>Another concern is the lack of acknowledgement of the Hampshire Grid improvement programme which will rezone the supply area. SW have not allowed for the new improved connectivity that would be available and by using data excluding this, will mean it could adversely impact on the Hampshire Grid decisions being made to the detriment of this intended scheme. SW must revisit their plan to allow the Hampshire Grid to go ahead as currently planned to improve connectivity and amend their proposed figures appropriately.</p> <p>Looking at another element of this proposal, the effluent recycling plant and operation is a major concern. The environmental relief from water storage solutions will outweigh the intended cost of this work. In essence, to build reservoirs for Hamble, Wallington and Adur will cost less than the current proposal, which is around £1.2Bn. As one looks at their plan, it becomes clear that SW are presenting us with a short term, hugely expensive solution that is power hungry and will leave consumers with bills that will spread over many years to pay. Indeed, it looks like the cost of these works will not even be paid off by the time the works need replacing. 60 years life for the actual recycling plant which then will have to be rebuilt, but the worst is not clearly enounced by SW. The components will require daily use even when no drought is present. The system only works with constant use so millions of gallons of water will need to be sent up this proposed 40 Km (!!) pipeline to [REDACTED] every day and all the new Works will need to operate every day to maintain their capabilities. Why would this even seem reasonable when a suitable site for water storage could be found nearer Southampton to cover the area around there?</p> <p>The intention to link into the Havant Thicket reservoir is frightening. This reservoir was never passed for an environmental buffer lake, it was passed by everyone on the understanding it would comprise spring water/rainwater only and be used in a drought if necessary. NO environmental group involved would have agreed to recycled effluent water being stored there. The possibilities for contamination are extremely high because SW have no idea how their new systems will work. The filters for reverse osmosis need daily maintenance and regular replacement every 5 years or so. Are SW going to be able to be relied on to carry out this, when in reality SW will try to push the lifespan of these filters to their limit, with all the implications of that. Should any contamination occur from SW systems, the reservoir cannot be cleaned, and this very expensive storage will be polluted for ever. This reservoir which should be able to supply water for many, many years must not be put at risk by someone who has no experience in this technology in any way.</p> <p>This whole concept as a so-called drought solution is going to cost £3M yearly (at current figures) just to keep it working, come winter or summer. How can this be justified as a suitable drought solution?? In fact the running cost of this project is nearly as expensive as the tankering option per megalitre so that proves SW are not approaching this project with any environmental appreciation or interest. SW do not even have any history with this machinery as it has never been used in this country before. Their failure rate for repairing leaks is exorbitant so just imagine how many times this untested unknown solution will fail due to lack of maintenance and inexperience with the operators of this equipment.</p> | <p>the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p> <p>All water companies in England and Wales are required to plan for a drought of a 1-in-500 year severity. This requirement is set by the government, not by water companies. Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a></p> <p>The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. Multiple options were considered during the options appraisal process that was carried out as part of the</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>To add to this issue SW by their stalling actions, will then leave DEFRA/regulators with a solution of tankering water from Norway with the associated costs and the fact that this water would need treating which will involve a cost before it can be used, regardless of the shipping, transferring and storage costs. And suitable storage facilities will need to be found along with more pipework to transfer the water at extra cost. The only other solution will be to continue to use drought permits and the Candover Drought Option. This proposal relies on extending their use until 2034 and should be stopped due to environmental issues. SW are seemingly content to sit back and wait until the recycling scheme is delivered, which could be an extensive period as many objections are now being raised. SW must not be allowed to continually abuse these options until their plan is granted.</p> <p>The construction of the new recycling plant on Broad Marsh on top of landfill has so many issues, it is unbelievable that they are continuing with this proposal. It is common knowledge that there is no lining over the harbour mud and due to the known contaminated waste that was used in this site, the possibilities for leachate into the water is very high. The amount of piling required, and the overall location of this plant is not acceptable in any way, along with the impact of the outflow, and SW should be directed to locate such a plant away from the coast. And then the 40 Km of pipeline needed to move the water to [REDACTED] adds to the query of why this site was selected. SW option assessment of this site has played down the risk factor to get acceptance of these works but the potential for damage is high. There are sites more suitable which could be used and SW must be pressured into making further investigation into one or more of these.</p> <p>Again, I wish to register my objections to this SW plan until proper assessments, ecological concerns and better options have been included in a new version of SW project submission in order that correct decisions can be made regardless of time frames.</p> | <p>RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>It is our desire to 'avoid' use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire in some scenarios. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WRMP853   | <p>Dear sir or madam</p> <p>I live in Littlehampton, and have a number of serious concerns about Southern Water's Draft Water Resources Management Plan. I am copying my local MP into this email, to ensure that she is also aware of these. Please see below for my response to the consultation:</p> <p>I reject the proposals put forward by Southern Water for both desalination and the effluent recycling scheme, and urge them to look instead at more environmentally friendly and cheaper options. I don't feel that these have been considered seriously, and they deserve a proper, independent, public investigation.</p> <p>Firstly, the desalination proposal was rightly rejected by public consultation in a previous incarnation of this plan. It's a high carbon, unsustainable, and expensive solution, and remains completely inappropriate. I find it insulting for Southern Water to attempt to bring this option back, when it has already been firmly dismissed.</p> <p>I suspect this attempt was made due to the completely inadequate public consultation process for these new plans. As a Southern Water customer I do not feel that I was fully informed or consulted before the desalination and effluent recycling options were selected. There should be a full statutory consultation on all options, and proper attempts made at community engagement. In fact, I am only aware of these plans through the impressive efforts of local groups who are concerned about our environment.</p> <p>Despite their upbeat e-newsletters, the reputation of Southern Water is already very poor. I still remember their record pollution fine of £90 million in 2021 and have seen friends in Barnham suffer from horrendous sewage overflow flooding. From their own data, Southern Water are losing 100 million litres of water (19%) every day due to leaks. Their plans for improvement included in this proposal completely fail to address this. They commit only to a target of 53% leakage reduction, so even by 2050 they will still be leaking around 10% of all our water. Any plans for their future should – as a minimum – address the issue of a proper mains replacement programme. As they have not done this, I do not trust them to build, operate and maintain what appears to be an additional, very complex treatment process with significant risks.</p> <p>The lack of ambition on addressing leaks, plus the lack of information and proper consultation, only further damages my perception of Southern Water. If these plans go ahead the first that many local people will hear of it will be: a) the eyesore of new developments; b) stories of their tap water being 'recycled sewage' – turning more people towards plastic bottled water (as has happened in Singapore); c) ongoing spiralling costs and 'accidents' that cause higher bills plus priceless environmental impacts and personal tragedies.</p> <p>The consultation rather patronisingly suggests that work on reducing leaks would cause disruption to local communities. But it's obvious that any measures to address our water security will cause some level of disruption – including the ones proposed by them. People understand this. What is also apparent is that new infrastructure would be more profitable for their shareholders than repairing leaks. This is precisely why we need a proper consultation on</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. The deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           | <p>all the options: their costs and benefits to all of us, and the environment, both in the short and long term.</p> <p>In addition to addressing leaks, I would like to see Southern Water develop positive solutions for storing more rain water. We already get a lot of rain in autumn and winter, and this is forecast to increase with the changing climate. I was shocked to hear that only 1% of rainfall is collected in the UK. Across the country we should be looking at the role of reservoirs in mitigating our increased experiences of flood and drought, and Southern Water should address this in their planning as a matter of urgency. Instead they are proposing shipping water from Norway during droughts, which is a ridiculous and costly 'solution' when we could have local resources readily available. I would also like to point out that the phrasing of the consultation on this question in particular is very poor – it suggests that importing water is the only option to protect river water levels. This is clearly not the case, as there are numerous better options for collection and storage of rain water.</p> <p>The Havant Thicket reservoir is mentioned in the proposals, but the completion date has been pushed back, and it is not clear how this will be managed. One further reservoir is suggested, but not until 2040. We experience regular seasonal flooding now, so this is a huge missed opportunity. Portsmouth Water previously suggested 80 possible sites for reservoirs – again, more and better consultation and research is needed for the public to reflect on these options. Instead these appear to have already largely been discounted as possibilities by Southern Water.</p> <p>The limited discussion of Havant Thicket reservoir itself raises further concerns about protecting the ecology of the area. A careful development of local rain water reservoirs could provide a unique biodiversity opportunity. We are lucky to live in an area rich with chalk springs, and these combined with natural reservoirs could have a great environmental impact. We could have a positive biodiversity story for a change! In contrast, we know that the addition of recycled effluent into reservoirs results in damaging changes to their temperature, salinity and geochemistry, with knock-on effects on all the local ecosystems that rely on them. I am very concerned that Southern Water's plans will have a negative impact on these.</p> <p>Alongside well-managed reservoirs, I would like to see a fuller consideration of the options for aquifer storage, which also appears to have been largely demoted in Southern Water's latest plans. Unlike effluent recycling, this is a proven, established, cheap, and simple technology. It also has a much lower carbon and environmental impact. Again, I would like to see our water systems being organised in a way that is both cheaper and more environmentally positive – these are not mutually exclusive choices.</p> <p>In relation to costs, the estimated price of the effluent recycling project is already a minimum of £1.2 billion, and likely to be higher as it is unproven technology. Even at the conservative amount, the plans do not reflect good value for money. It's possible to build 3 new winter storage reservoirs for the same cost. These would provide recreational and biodiversity benefits for 200 years, whereas the more expensive and environmentally damaging effluent recycling plant is expected to be redundant in just 60 years. Documents from Southern Water also show that this scheme will have higher average carbon emissions and embedded carbon impact than that option of shipping in water from Norway! We desperately need sensible plans for our water infrastructure that take a serious, long-term view of our needs. A private company's 50 year plan is clearly not enough.</p> | <p>Regarding the need for a new consultation, we consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Regarding effects of recycled water on the chemistry of Havant Thicket reservoir, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8. We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>These costs also need to be considered in the urgent context of the cost-of-living crisis that we're living through. Water is not an optional extra, and us residents have no choice but to use Southern Water. A report from nearby Lewes District council identified that to fund these plans Southern Water would need to raise customer bills by 91% over the next five years. We can't afford it. As OFWAT are expected to cap any attempt to charge us this at 45%, the gap here places a huge question mark over the financial viability of the proposals. The investment in repairing leaks, reservoirs, and aquifer storage all appear to be much better value for money, and more realistic economics.</p> <p>Although the effluent recycling plants are described as a 'drought resource' they will have to operate year-round to make sure the pumps and pipes remain in good working order. So on top of the expensive building, ongoing chemical treatment and operating costs will also be huge. In a climate emergency and a cost-of-living crisis, we should be looking for options that reduce energy use and costs as much as possible, rather than increase them. Southern Water have continually failed to provide the promised details on these energy needs, but it seems obvious that this is a high-cost proposal.</p> <p>One of the proposed locations for an effluent recycling plant is an unlined landfill site, which contains large amounts of domestic and industrial waste. There is a clear danger that this waste will leach into the surrounding environment. In addition, several of the areas are also sites for internationally important migrating birds - which should not be disturbed. Clearly both the construction and operation of these plants will result in more light and noise pollution, blighting the environment for humans and non-humans alike.</p> <p>With reference to my own home town, I am deeply concerned that there will be serious issues around reject water being discharged into the sea at Littlehampton. This water is predicted to be four times more concentrated than existing sewage discharge, which Southern Water have confirmed will negatively impact the environment. The residual chemicals and contaminants will be put into our sea, and the higher temperature means they will float on the surface. Despite these concerns on waste, there do not even appear to be adequate monitoring and management plans to maintain the plants and avoid pollution. We already suffer the consequences of regular 'sewage alerts' in Littlehampton thanks to Southern Water - and the impact on residents and visitors is immense. It's heart-breaking and infuriating to see them proposing more projects that work against the environment rather than with it. We simply cannot afford to allow Southern Water to push on with projects that will degrade our biodiversity and local ecology even further.</p> <p>Thank you for taking the time to read my comments. I remain hopeful that public consultation responses can make some difference, and would like to request a response to all of the concerns I have raised.</p> <p>Kind regards</p> | <p>options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Sea tankering from Norway is no longer included in our plan.</p> |
| WRMP854   | <p>I am writing to you today to express my concerns around the Water Resources Management Plan Consultation of Southern Water.</p> <p>I believe that Southern Water should be focusing more on creating sustainable solutions. I think it's important to use this opportunity of developing the Havant Thicket Reservoir and other recycling schemes to balance collection and storing to reduce flood risks in and around the local communities they are based in.</p> <p>I also believe that there needs to be more ambition regarding leakage reduction. At the moment</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>around 3% of the water Southern Water takes from the environment is lost before it reaches the treatment works, a further 19% of water that is paid for by the consumers is lost in the distribution network. This results in figures exceeding 100 million litres of water being lost every day. It is my opinion that Southern Water needs to deliver faster water main renewing programmes and replace the aging pipeline to get this issue under control.</p> <p>I personally have concerns around Southern Water's trustworthiness in our local community. In recent years they have had several failures in sewage treatments and have been fined over 238 million pounds for:</p> <ul style="list-style-type: none"> <li>manipulating information (£20.3 million), discharging raw sewage into the sea (£160,000), a raw sewage spill (£200k), discharging raw sewage from a wastewater and treatment plant (£2 million), failures at treatment sites (£126 million), deliberately pouring sewage in the sea (£90 million). The risk of pollution to the Havant Thicket Reservoir as well as damage to Langstone Harbour and the Solent is unacceptable.</li> </ul> <p>I also feel that Southern Water needs to do more to protect the environment and develop a strategy that helps them honour their commitment to be carbon neutral by 2030. River catchments could be protected quickly if river catchments were moved closer to the tidal limit and abstraction boreholes down the catchment. This would in turn reduce the priority for abstraction reform (which is driving the need for effluent recycling). Options that don't have a carbon and emissions footprint need to be developed.</p> <p>It should be noted that the effluent recycling schemes for Hampshire and Littlehampton have the highest negative environmental impact score of any other considered options. Furthermore, the effluent recycling schemes that are to be developed by 2035 each have a higher carbon impact than that of the water from Norway by sea tankers.</p> <p>Finally, if the plan based in Havant is to go ahead I think an alternative site for the recycling plant should be found. There is a risk of constructing large tunnel shafts and piles through the 13m of deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great.</p> <p>I would appreciate your acknowledgment of these concerns. These are very close to my heart as a resident of the Havant Borough.</p> <p>I hope to hear from you soon.</p> | <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. Sea tankering from Norway is no longer included in our plan.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |
| WRMP855   | <p>Please see the response below from Havant Friends of the Earth.</p> <p>1. Summary<br/>We object to Southern Water's Plan to develop effluent recycling as an alternative water source. We do not think it is an appropriate drought solution. There are other more sustainable options that could protect chalk streams such as the Itchen, Test, Meon and the Ems.</p> <p>2. Responding to Climate Change<br/>Southern Water's Plan emphasises the need to adapt to the possibility of severe droughts, while not taking sufficient account of severe heavy rain events, also predicted by scientists. The Plan</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1) We note the objection to Hampshire Water Transfer Water Recycling Project (HWTWRP).</p> <p>2) see 5e</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>should focus on maximising opportunities to capture and store this free resource, for use during droughts, which will also reduce flooding risks.</p> <p>3. Level of need<br/>We think that Southern Water have over-estimated future demand deficit, which is to their advantage as it helps to make their case for effluent recycling.</p> <p>3a) Population<br/>Justification of need for effluent recycling is based on Southern Water's estimate of population growth between 7% and 34% from 2025 – 2075, indicating a baseline growth for their revised plan is 23%. Why are they not using the ONS figure of 16%, approved by OFWAT? Southern Water's population growth forecast figures are inconsistent and vary between different elements of their Plan. We think that Southern Water are choosing an over high projection of population growth and the figures need careful analysis by DEFRA and their advisers</p> <p>3b) Smart Meters and Water Butts<br/>We do not yet know how the roll out of smart meters and smart pricing might further reduce demand. A more widespread distribution of free water butts might also make a difference.</p> <p>3c) Hampshire Grid improvements<br/>SW have not taken into account the Hampshire Grid improvement programme, available to rezone the western supply area from 2030. The Company option review and selection process is based on individual supply zones. Taking account of the increased ability to transfer water within Hampshire by merging existing zones could have changed the options appraisal process.</p> <p>3d) Hosepipe bans<br/>Measures to improve water provision should not be to a level where all hosepipe bans are avoided. Occasional hosepipe bans serve to educate people about the value of water, the need to reduce consumption and avoid wastage.</p> <p>4. Effluent Recycling<br/>Although we have focussed our response on the Hampshire Recycling Scheme, we are also concerned about the selection of 3 other effluent recycling projects in the Plan. The selection of all 4 schemes appears premature when many of the risks are unknown, studies are not complete, and other more sustainable options have not been properly assessed.</p> <p>4a) Costs<br/>We remain opposed to the Hampshire Water Transfer and Water Recycling Project because of its high financial, energy/carbon, chemical and environmental cost.</p> <p>4b) Financial costs<br/>Construction of the Havant water recycling plant and 40 km transfer pipeline to [REDACTED] will cost £1.2 billion to build (and rising) plus £395 million per year to operate, including energy, chemicals, staffing and maintenance costs. Of the options known to have been appraised by</p> | <p>3a) We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 34% to 7% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>3b) All our meters going forward will be smart meters. We plan to replace all our existing meters with smart meters by 2030.</p> <p>3c) We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p> <p>3d) We will continue to rely on Temporary Use Bans (TUBs) and Non-Essential Use Bans (NEUBs) as means to reduce demand during droughts.</p> <p>4. We have noted this comment.</p> <p>4a) We have noted this comment.</p> <p>4b) We have noted this comment.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>Southern Water this is one of the highest cost solutions. It is estimated that it will only last about 60 years and will leave no legacy. This does not present best value for customers. For the cost of this scheme you could build 3 reservoirs to store winter rainfall, which could last for 200 years and have low operational costs.</p> <p>4c) Energy and Carbon costs<br/>The recycling project is contrary to Southern Water's commitment to achieve net zero carbon by 2030. The operation of the reverse osmosis plant and pumping water 40 km from Havant Thicket Reservoir to [REDACTED] will result in excessive carbon costs and greenhouse gas emissions from 2030. These will be among the highest emissions for any of the options possible, even worse than those resulting from tankering water from Norway. This could present a significant risk at a time of global energy insecurity.</p> <p>Southern Water say that they expect to mitigate this by capturing renewable energy for the project, by burning methane from sludge at [REDACTED] [REDACTED]. However at the present time, [REDACTED] [REDACTED] are only able to produce 70% of their own electricity needs from this. Southern Water also talk of generating electricity from solar panels, but it is doubtful that this can provide more than a small part of the daily electricity needs. It will still need to draw a large amount of electricity from the grid, at a time when there will be many competing demands on that, from increases in domestic electric heating and electric vehicle charging. Although the grid is decarbonising, it will be some time before high electricity use can be seen as being without an associated carbon cost.</p> <p>Southern Water should develop a strategy that prioritises low energy solutions that are sustainable and work with climate change.</p> <p>4d) Technology<br/>The nature of the reverse osmosis process means that it is not fit for purpose as a drought resource as the process must be run continuously. In Havant's case this will produce 30 Mld of water, 365 days per year, as its minimum flow, to avoid damage to the membranes, pipes and pumps. It cannot be switched off when not needed. This is not a sensible nor sustainable solution.</p> <p>4e) Risks and environmental impact<br/>Southern Water say that they take environmental impact into account when choosing options. If so, why have they not rejected this scheme which has the highest negative environmental impact of all possible options? It risks impacts on Langstone Harbour, the Solent, Havant Thicket Reservoir and the countryside along the 40 km pipeline route.</p> <p>4e)(i) Risks from contaminants<br/>The Reverse Osmosis treatment process is very complex, requiring very close management and monitoring by highly trained &amp; competent operators, a fairly consistent treatment stream, and a lot of maintenance which is expensive. It should be technically possible for a well run plant to remove most but not all contaminants. However Southern Water has a poor track</p> | <p>4c) Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>The requirement of the Hampshire Water Transfer Water Recycling Project (HWTWRP) is to protect the Test and Itchen, by the reduction of the abstraction on the rivers. In addition, Southern Water have a leakage and demand reduction programmes, which reduces the usage and maximum capacity of HWTWRP. The consequence of this is that a significant percentage of the water demand will still need to be transfer into the area. While the option being progressed uses the lowest power demand, there is still a significant demand placed on the national grid. Southern Water are looking at alternatives power supplies, but they need to be robust and deliverable to support the operation life of this National Significant Infrastructure Project.</p> <p>4d) Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>4e) Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> |

|           | <p>record with coastal discharges, poor maintenance, telemetry failures, and £92 million in recent fines. We do not trust this company to run this technology safely. People are particularly concerned about the recycled effluent being pumped to Havant Thicket Reservoir, which Southern Water will use as an 'environmental buffer lake'.</p> <p>Thousands of people in the Portsmouth Water area, will be drinking the mixed spring and recycled water during an emergency or a drought. From 2040 they will receive it more routinely and this will then include parts of West Sussex. All could be placed at risk if any chemical or organic contaminants got through the recycling process and into the reservoir. The results from the trial recycling plant in 2023 raise significant concerns, with bacteria in output water and low sampling rates for pesticides, pharmaceuticals and trace organics. That Southern Water will also be in sole charge of testing water quality from the recycling plant before it enters the reservoir, does not re-assure us, especially with their track record of delays responding to alarms, and manipulating data.</p> <p>4e)(ii) Environmental risks to the Reservoir<br/>The project is being promoted to the public now, although full results of Environmental Impact Assessments are not yet known. We do not know what will be the effects on the chemical balance of the reservoir and how that could effect biodiversity. There will be changes to temperature, salinity and geochemistry which could all impact the ecology.</p> <p>4e)(iii) Environmental risks to the Solent<br/>The preliminary environmental assessment raised concern about the likely significant effect on the Solent of the reject water from the treatment process, being discharged into the sea. It will be 4 or 5 times more concentrated than the usual treated effluent release. There is particular concern about the concentration of pesticides, pharmaceuticals, forever chemicals and chemical disinfection by products.</p> <p>4e)(iv) Reducing nitrates in Langstone Harbour<br/>A benefit of the spring fed reservoir was that it would reduce the amount of spring water entering Langstone Harbour, reducing nitrate levels from legacy agriculture, which harm the Harbour ecosystem. If the reservoir is to be regularly topped up with recycled effluent, more of the spring water will have to be released into the Harbour, increasing nitrates.</p> <p>4e)(v) Risks to Langstone Harbour due to siting the recycling plant on contaminated landfill.<br/>We are particularly concerned about the plan to locate the recycling plant on a contaminated landfill site at Broadmarsh, Havant. This is known to contain solvents, hydrocarbons and asbestos among other toxic materials. The site is close to Farlington Marshes and Langstone Harbour, a Ramsar wetland of international importance with SSSI and SAC conservation status. There are significant risks to this habitat, because the plant will require deep piling and tunnelling through the landfill to the chalk aquifer below, likely to release toxic leachate into the Harbour. There are safer and more suitable sites for the plant which avoid this unacceptable environmental risk.</p> | <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response |           | <p>4f) [REDACTED]<br/>If recycling effluent must be progressed, [REDACTED] Waste Water Treatment Works, near Fareham, would be a better location. This was considered by Southern Water but shelved. It would have the advantage of having space for the effluent recycling plant away from the coast, reducing environmental risks. Although it would require an environmental buffer lake to be built, it would also be a more sustainable solution as the plant would be closer to where the water is actually needed in Southampton and Winchester. This plant would not have as much effluent to process as [REDACTED] but in combination with more sustainable alternative water sources, this may be sufficient.</p> <p>5. Alternative water sources</p> <p>5a). Tankering water from Norway<br/>This has been selected by Southern Water as a temporary drought solution if needed before recycled effluent comes on line, which is planned for 2035, but there are high risks with the new technology that this will be delayed further. We oppose this as it would come at excessive cost and high environmental risk. Norwegian water is chemically very different from water in the Test and introduces new risks from acidity and non-native organisms. Southern Water have mentioned an alternative – working with industries in Southampton to reduce their use of potable water. We think that much more priority should have been given to this in the early part of the Plan, as well as working with commercial users, golf courses, high use agriculture and community buildings to reduce their water use.</p> <p>5b) We believe that there are many more sustainable and environmentally friendly alternatives to effluent recycling, which if used in combination and progressed now, could meet water needs without the necessity of using recycled effluent. Southern Water have not completed a full review of these alternatives “a full re-appraisal exercise was not considered time or cost beneficial” (Annex 20, page 3). Given the pressing need to find solutions for the Rivers Itchen and Test they have now wasted more time. A full review of all the options should be a matter of urgency. As the Recycling Project may not be operational until 2035 or beyond, some of the alternatives, could be available within 3 to 6 years if progressed urgently now. A strategy to protect our rivers should not wait until 2035 in the hope that Southern Water can get approval for effluent recycling. Their strategy of putting all their eggs in one basket, failed with desalination, and they should not be repeating the same mistake with effluent recycling. At a minimum they should be taking a twin track approach, developing more sustainable alternatives alongside their recycling project.</p> <p>5c) Abstraction from above the last weir/tidal limit.<br/>Abstraction here, rather than further up the river catchment, would preserve the freshwater environment along the length of rivers such as the Itchen and Test, not just in a drought. The only requirement would be for additional pipework to take the water to the water treatment works. If action on this was started immediately the water could perhaps be available in 3 years time. The amount of fresh water entering the estuaries would be no less than it was previously, assuming that abstraction levels are not permitted to be greater than current levels. This</p> | <p>4f) Work formally paused on investigating and developing Fareham Wastewater Treatment Works as a back-up option in May 2023, in agreement with RAPID, and so we have not developed it to the same level as HWTWRP. A Back Up option was also identified. This involved transfer of recycled water from a water recycling plant to Itchen WSW via an environmental buffer. Desalination options were removed from further consideration at this stage. The outcome of the options appraisal process was supported by RAPID at Gate 2. Although both HWTWRP and the Back Up option were able to meet requirements of supplying 75MI/d in the Western Area (as required by WRMP19), and were able to meet the identified future need of up to 90MI/d, HWTWRP presented significantly better value for customers and was better able to meet long-term regional supply requirements due to improved adaptability. Therefore, the focus was on progressing HWTWRP as the selected option.</p> <p>5a) Regarding the chemical composition of water brought in by tanker, this option is no longer included in our plan.</p> <p>5b) Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can. Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>method could also be applied to protect other rivers in Southern Water's area. This is supported by a former managing director of Southern Water who has written to DEFRA to promote this option, which is covered by the European Water Framework Directive. The UK Technical Advisory Group report indicated that estuary water can be abstracted 365 days per year to 50% of the 95% percentile flow rate. From records for rivers in the South East this would allow abstraction of 1,750 million litres per day. This is a much more sustainable and cheaper solution, protecting our rivers and drastically reducing the need for abstraction reform which is driving Southern Water to select effluent recycling.</p> <p>5d) Extracting water from rivers when water levels are higher, often in winter. It does not make sense to stop all abstractions from chalk streams. It should still be allowed when levels are high. It would not endanger the water environment and would also reduce flooding risk. What is needed is a more flexible approach to abstraction from rivers, based on environmental risks, including flood risks. This could also be applied to other rivers. Such abstraction would need to be combined with water storage options – nearer to the point of use to avoid the high costs of pumping water long distances.</p> <p>5e) More Reservoirs<br/>Research shows that customers prefer more natural water resource solutions, like new reservoirs and water storage in aquifers. But Southern Water are ignoring this with no plans in place for any new reservoirs in Hampshire. The River Adur offline reservoir in West Sussex is not scheduled for delivery until 2045. Why not prioritise this sooner?</p> <p>Given the crisis in water supply that Southern Water have emphasised, why are they not looking for other sites for reservoirs, closer to where the water is needed. There should be an active programme to find sites where they can store the additional water that will result from climate change, and which can meet the deficit in times of drought.</p> <p>5f) Aquifer storage<br/>Water storage using the Test Managed Aquifer Scheme, has been recognised in this plan but is being held back. Many other potential aquifer storage sites have been identified by Southern Water but have been "parked". Their excuse is that yield is uncertain and further investigation is needed, so schemes have been deferred until WRMP 2029. This is not acceptable. Test MARS and other aquifer storage options should be investigated and developed as soon as possible. The amount of water that any one can hold may not be great, but in combination these schemes could retain and deliver a significant amount of water during a drought. Ensuring that aquifers are topped up during periods of heavy rain, where they are sufficiently confined, could provide a minimum cost sustainable solution which would work with climate change. Even if the yield is small these schemes must not be delayed.</p> <p>5g) Southern Water have included a few of these schemes in the current Plan, but they are being delayed while many other options have been "parked" and not included at all. Instead they are presenting effluent recycling as the only solution, both to DEFRA, the Environment Agency and the public. This makes the public consultation completely inadequate.</p> | <p>our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>5c) We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>5d) The amount of water we can abstract from river and groundwater sources are determined by our abstraction licences. The licences typically specify the maximum amount of water we can take from a source over a year with a limit set on maximum daily abstraction. We cannot take unlimited amount of water from these sources during wet periods. The availability of excess water does not mean that we can exceed the volumes permitted in our abstraction licences. The treatment capacity of our sources typically corresponds to the licence or the demand in the area supplied by the source.</p> <p>5e) Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>5f) A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>5h) Southern Water say that the Environment Agency will not allow them to progress these other schemes. Under their optimisation process Southern water say they must first wait to see the results of smart metering. However this is not preventing them from pushing ahead with effluent recycling and there is scope for a twin-track approach. The Environment Agency indicate they can only respond to projects that the water companies have selected and put forward to them in sufficient detail. Southern Water have not done this with the more sustainable options.</p> <p>5i) Investigation into greener lower cost schemes and their development should be started as soon as possible. Only when these schemes have been investigated and come into operation, and their water yield known, should there be consideration of whether very expensive effluent recycling projects are needed as an additional resource. This will also allow time for longer term demand to be forecast with more confidence, as we will have more certainty on abstraction reform needed and population growth. A delay might also allow time for technology to progress, perhaps enabling a water recycling system which can be switched on and off when needed.</p> <p>5j) Changing the water industry funding mechanism is essential to stop incentivising infrastructure heavy solutions which have to be paid for by customers. On top of which they must pay to service the huge debt that will be associated with Southern Water's Plan. Instead the funding mechanism should incentivise the development of cheaper sustainable solutions that work with climate change. It also needs to drive greater investment in mains repair and replacement, to speed up the reduction of leaks.</p> <p>5k) Fixing leaks.<br/>Southern Water lose nearly 100 million litres per day of treated water through leaks, 19% of the water that customers have paid to treat. They only propose to reduce this by 53% by 2050, i.e. still losing around 10% of all the water they treat, including, from 2030, highly expensive recycled water. This is not acceptable and is related to Southern Water's very poor record of replacing ageing water mains. They should not be planning high tech infrastructure to sit on top of a crumbling water network which wastes so much precious water taken from the environment.</p> | <p>5g) Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>5h) Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>5i, j) We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>An industry leakage specialist tells us that if Southern Water prioritised and funded leakage reduction they could strive to achieve a 50% reduction by 2040 and a 70% reduction by 2050. This would greatly reduce the need for alternative water sources.</p> <p>6. Lack of consultation<br/>When Southern Water made a material change to their plan, from desalination to effluent recycling, they did not carry out a full review of all of the alternative options, nor did they undertake a statutory consultation. This is not acceptable. The proposal for effluent recycling will impact everyone in South Hampshire, the Isle of Wight and West Sussex.</p> <p>There has been insufficient advertising of this consultation. All customers should be consulted before such a major change to their water supply takes place. Notice could have been sent to everyone via their water bills, but Southern Water rejected doing that.</p> <p>7. Plastic bottle mountain<br/>Where recycled effluent has been introduced in other countries, it has not necessarily been used for drinking water but mainly for industry and agriculture. Where it has been used for drinking water there has been an increase in people drinking bottled water, resulting in a plastics mountain. The financial and social impacts of water rejection along with the environmental impact has not been considered. Southern Water, DEFRA and the regulators must take account of this.</p> <p>8. Conclusion<br/>We object to Southern Water's Plan to focus on effluent recycling as the solution to meet water deficits in our region. Level of need has been overestimated. The Havant plant and pipeline will be highly costly to construct and operate. It will come with high negative environmental impacts. The technology will not be fit for purpose as a drought resource because of the need to keep it running continually 365 days per year. It will not be best value for customers and consultation about it has been inadequate.</p> <p>We have described various cheaper, environmentally friendly and more sustainable options that put people and the environment before profit. These options could, in combination, work with climate change to store free water at times of heavy rainfall. This could then be available to meet needs in times of drought.</p> <p>We have also included details of moving abstractions down river to just above the tidal limit, which could protect the water environment along the length of chalk streams.</p> <p>Southern Water are on the wrong path. They should be urgently investigating and developing these more sustainable schemes. Only if water supply proves inadequate, once these schemes are in operation, should effluent recycling be considered at a later date. We urge DEFRA to reject this Plan, challenge the assumptions and require Southern Water to actively investigate and prioritise bringing forward more sustainable options.</p> | <p>meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>5k) The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>6) Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/><a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> |

|           | Submitted on behalf of Havant Friends of the Earth                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>7 &amp; 8) Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP856   | <p>SW ' Water Resources Management Plan' – November 2024</p> <p>Dear Secretary of State Reed,</p> <p>I am deeply concerned about the proposal to recycle effluent water and feed it into the Havant Thicket Reservoir. Havant Council originally gave planning permission in 2021 on the basis/understanding that the sole input of water would be water diverted from Havant and Bedhampton's renowned springs.</p> <p>Even though Havant Borough council, local communities, individuals and Hampshire County Council have voiced objections to Southern Water's plans to recycle Effluent water and turn it into water that is supposedly drinkable, something that has never been done in this country before, it seems that no one in the appropriate authorities are listening to us.</p> <p>Why, if Southern Water want to recycle effluent water, cant they build their own reservoir to store it?</p> <p>What's the advantage of mixing the recycled effluent water into a spring fed reservoir?</p> <p>If we need to collect more water, is it not possible to more cost-effectively collect rain water? Apparently we only collect 1% of rainfall in the UK.</p> <p>Rainfall is a freely given gift of nature, surely Southern could build a reservoir to catch rainfall and engage local communities to collect rainfall from roofs. This could provide many benefits to communities from recreational sites to biodiversity opportunities.</p> <p>19% of the water that Southern customers have paid to treat is lost in leakage in the system. Southern Water must to be mandated to deliver a much faster programme of renewing water mains to replace their ageing pipe network, or they will never get leakage under control.</p> <p>Southern Water also have an appalling track record of prosecutions for pollution incidents, and often they fail to take adequate and immediate action. to rectify issues.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Regarding storage, we are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>I live in the Lavant Valley where they have been 'overpumping' effluent water that is supposedly very dilute into the River Lavant. Our River has been declared 'dead' after over 14 years of this practice, meaning we don't see the wildlife and biodiversity that was once a beautiful rare chalk stream (I think there's only 15 of them in the country):<br/> <a href="https://inews.co.uk/news/chichester-river-pumped-non-stop-waste-2977264">https://inews.co.uk/news/chichester-river-pumped-non-stop-waste-2977264</a><br/> informs us that the Chichester River Lavant was pumped with 273 days of non stop waste in 2023.</p> <p>"Untreated sewage was discarded into the River Lavant in West Sussex for 6,542 hours last year"</p> <p>"In total, Southern Water's Lavant Wastewater Treatment plant overflowed for 6,542 hours, the equivalent of 273 days of non-stop sewage.</p> <p>Chichester harbour, a designated area of outstanding natural beauty once known for its oysters, is among the areas impacted by the sewage overflows.</p> <p>(In February, I revealed how the nine-mile Lavant, which runs from the village of East Dean to Chichester, was "effectively dead", due to Southern Water pumping untreated water into the river.)</p> <p>Furthermore, Southern Waters Water Resources MGT Plan has a high carbon footprint. HavantMatters.org inform us that</p> <ul style="list-style-type: none"> <li>– The Hampshire and Littlehampton effluent recycling schemes have the highest negative environmental impact score of any of the options considered.</li> <li>– The effluent recycling schemes to be developed by 2035 each have a higher carbon impact than the transfer of water from Norway by sea tankers.</li> </ul> <p>Worse, on digging deeper as this plan made no financial sense to me when I first looked into it as it is resource intensive and expensive to set up, it seems that the DEFRA water industry funding mechanism incentivizes infrastructure heavy solutions, Can Defra not encourage development of sustainable solutions that work with climate change?</p> <p>Finally, on behalf of our community, I second SOSCA's requests for:</p> <ol style="list-style-type: none"> <li>1. An in depth independent review of the entire proposed infrastructure by independent qualified professionals in this field be published.</li> <li>2. An in depth independent review of the ability for SW's recycling engineering to satisfactorily cleanse the recycled effluent removing all known chemical pollutants and pharmaceutical contaminants by independent specialists in this field.</li> <li>3. An in depth independent review of the costings of all the proposed infrastructure, pipes, pumping stations, etc. by independent financial advisers.</li> <li>4. And a costings of the on going maintenance required for a project that will be required to run daily all year round and not just in drought conditions and to forecast the life time of such a project.</li> </ol> | <p>why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a>.</p> <p>In 2025 our team will be implementing a £3.3m project to seal sewers and manhole covers in Charlton and Singleton, in the Lavant Valley, to keep groundwater out of our wastewater pipes during rainy periods. This follows the completion of a £1.1m project to seal sewers in the neighbouring village of East Dean in 2024, and is similar to work continuing in nearby Funtington and Bosham. This area has, historically, suffered badly with a build-up of groundwater during the wetter months of the year, and when this seeps into our network it can overload the system. This can cause flash flooding locally, and also trigger storm overflows further down the valley and into Chichester Harbour when the influx of water is too much for our treatment sites and pumping stations to handle – requiring releases into the environment to prevent more homes and communities from flooding. Once work is complete in Singleton and Charlton, we will continue to work our way down the Lavant Valley.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15Ml/d to 60Ml/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10Ml/d to 40Ml/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> |

|           | <p>5. An independent review of the state of the infill-site at Broadmarsh which will be cut open to enable all the 45kms of piping required to transfer the water to the [REDACTED] pumping station and beyond.</p> <p>6. And for the forecasting of the chemical and health impacts the opening of this infill site will have on the harbour and communities.</p> <p>Otherwise I fear for the future integrity of our drinking water,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP857   | <p>I am responding to Southern Water (SW) latest consultation "Our consultation on securing a resilient water future for the South East". Closing date - 3rd December 2024.</p> <hr/> <p>There are so many different elements within this consultation: my response focuses on just two.</p> <p>[A] That SW give more attention to smaller scale / sustainable options than the high cost and high impact solutions proposed.</p> <p>I believe that greener and lower impact solutions to the issue of water shortage in the south east do exist. Amongst these are to give the water companies more challenging targets for leakages and mains renewal.</p> <p>If the plan took more notice of predicated changes to our climate, then more winter rain could be captured and used in dry summers. This is a good quality free water resource. SW should be designing and carrying out more schemes to capture it in winter and store for dry summers. It has been commented on that the population growth estimates given in the Plan are too high. An over estimate could be used to push for major projects like the Hampshire Water Transfer and Water Recycling Project (HWTWRP).</p> <p>The investment model needs to be able to preferentially select smaller more sustainable options, whereas it currently favours large ones like the HWTWRP.</p> <p>More challenging targets should be set for delivery of the groundwater borehole schemes and Test Managed Aquifer Recharge Scheme in Hampshire, as they require minimum infrastructure and are within the company's control.</p> <p>The investigation of other aquifer storage schemes in Hampshire, the IOW and West Sussex is not being prioritised to establish the yield they could provide. As this is essential, it should be prioritised and funded soon so that these schemes can be included as feasible options.</p> <p>To develop multiple smaller schemes, close to where the water is needed, seems more resilient and more sustainable than large and expensive projects, which are likely to have a greater effect on the environment both initially and in the longer term.</p> <p>Would it not be better, more resilient and more sustainable to develop multiple smaller schemes, close to where the water is needed, many of which do not even require new consents, just treatment plant or borehole upgrades.</p> <p>The public favour more natural solutions such as aquifer storage, reservoirs and catchment management. Why are SW not listening to their customers and instead pushing ahead with the least favoured options of desalination and effluent recycling?</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a>. It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>If there was a situation like a sustained loss of power or a major fire at the Water Recycling Plant (WRP), would the planned infrastructure enable customers to receive a water supply that excluded the contribution from the WRP until the emergency was over?</p> <p>I understand that SW have not completed a full review of the Plan considering all alternative options as “a full re-appraisal exercise was not considered time or cost beneficial”.</p> <p>[B] That the proposed Hampshire Water Transfer and Water Recycling Project (HWTWRP) does not go ahead.</p> <p>Large infrastructure schemes should be a last resort once more sustainable options have been exhausted. This project should not be put forward as an initial solution. There have been questions raised over the Plan’s estimates of population growth in the area due to be served by the HWTWRP. If it is an over calculation, then this proposed large scale project is probably not the best solution.</p> <p>I understand that SW is allowed to make a profit from building new infrastructure. The proposed project is going to be a high cost and high impact solution and the question is how essential is it to have something on this scale?</p> <p>The costs are going to be felt by SW’s customers over an extended period of time. One example of costs is the need to keep the proposed plant and pipelines running 365 days of the year, although the treated waste water is not needed all the time.</p> <p>The selection of effluent recycling via Havant Thicket and the transfer (40km) to [REDACTED] results in unacceptably high carbon impact and greenhouse gas emissions. Also, I have concerns about the resilience and long term value of privately owned water companies working independently of each other, devising major stand alone schemes like the HWTWRP.</p> <p>The proposed location of the Water Recycling Plant on the contaminated landfill site at Broadmarsh wastewater treatment works at [REDACTED] is also a concern. Apart from the potential environmental hazards and the visibility impacts, the construction and then ongoing processes at the plant are likely to have a negative on wildlife and plants.</p> <hr/> <p>I have been underwhelmed by Southern Water’s amount of, and methods for, publicity on this latest consultation. I belong to some environmental groups and also, via the BBC web pages, follow daily the local news for Dorset, Hampshire and the Isle of Wight. Consequently, I should be well placed to notice Southern Water publicising it: I only learnt of it quite recently.</p> | <p>environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Aquifer Storage and Recovery (ASR) schemes can have significant additional technical challenges and cost implications in comparison to MAR schemes. ASR within the Lower Greensand Group has additional challenges including shorter operational asset life, aquifer mineralogy (metals) and abstracted water quality challenges, greater downstream treatment needs, and more stringent daily operational management and control around water cycling (and so also less flexible).</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not</p> |

|           |          | <p>possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP858   | <p>Dear DEFRA</p> <p>As a local resident and Southern Water bill payer, I am writing to express my extreme dissatisfaction with the Southern Water Resources Management Plan.</p> <p>I have 6 main concerns with the current proposals:</p> <ol style="list-style-type: none"> <li>1. The Funding of the Hampshire effluent recycling scheme – backdoor enrichment of Southern Water shareholders<br/>The cost is enormous and will be debt funded. The funding of this debt is simply another route for the enrichment of Southern Water shareholders. I believe either the debt should be funded elsewhere or the profits on the debt included in the profits shown by Southern Water as part of the scheme (which are already excessive).</li> <li>2. Alternative lower cost solutions have not been adequately considered or made available to the public<br/>This is another example of the UK water industry being incented via Ofwat to pour concrete in large scale schemes (in the name of asset investment) rather than looking for lighter weight simpler solutions not requiring huge capital investment. Consideration of the alternatives has not been made public and the key documents are not available for public scrutiny. Examples include new boreholes close the where the water is needed, and river abstraction close the sea. We receive abundant rain during winter, and Southern Water should explore solutions to store this natural water for use during dry summers.</li> <li>3. Environmental pollution: Impact of Effluent Recycling Scheme on the Solent<br/>There are substantial environmental concerns related to the effluent recycling scheme, particularly regarding the discharge of concentrated reject water into Langstone Harbour and the wider Solent. Furthermore, during the construction phase deep tunnel shafts are proposed at Broadmarsh, adjacent to [REDACTED] and on the banks of Langstone Harbour. This is a historic landfill area containing unknown, undocumented toxins and pose a significant risk to Langstone Harbour's ecosystem.</li> <li>4. The solutions are excessively energy Intensive<br/>The reverse osmosis solution proposed for the [REDACTED] site is a very, very energy intensive solution never before used at scale in the UK. This technology is generally only deployed in much hotter climates where there is large amounts of renewable energy (e.g. large scale solar energy). Furthermore, the site of the [REDACTED] plant is 40km from where the water is required – again pumping water over very large distances is also very energy intensive. The Hampshire scheme is a high carbon solution and will cost more than £3 million/year to run.</li> <li>5. Lack of focus on leakage<br/>Southern Water need to have a much more ambitious programme of action to reduce leakage, 3% of water Southern Water take from the environment is lost before it even reaches the treatment works, then a further 19% of water that customers have paid to treat is currently lost</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> |

|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>to leakage in the distribution network. They have been one of the slowest to invest in advanced pressure management solutions to control leakage and extend the life of the distribution network.</p> <p>6. The public were deceived about the use of the use of Havant Thicket reservoir. The Havant Thicket reservoir was sold to the public by Portsmouth Water as containing water from chalk aquifers. Mixing this with output from the Effluent Recycling Scheme will mean that Portsmouth Water customers will no longer get the water quality they have been used to but will receive a different product without having had the opportunity to specifically object.</p> <p>In conclusion I urge you to reject the current Southern Water plan and require Southern Water to develop a more sustainable plan that works with climate change &amp; which puts the environment before profit.</p>                                                                                                                                                                                                                                                                                                                                  | <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> |
| WRMP859   | <p>I am strongly against Effluent recycling- For me one of the main issues is TRUST.</p> <p>Do I TRUST SW to recycle sewage and put it in my drinking water?</p> <p>'No' is the answer and it's a resounding 'no' from practically everyone I speak to. They are not doing the job they are paid to do now properly- why should we TRUST them to do this?</p> <p>There has been pollution incident after pollution incident which has lead to a breakdown of trust in both Southern Water and Portsmouth Water. Treatment plants and pumping station have regularly failed, there have been prosecutions and huge fines for pollution incidents and they have failed to take prompt action to rectify problems. Reverse osmosis is a complex advanced treatment process - how on earth can we be asked to trust SW to do this properly and supply our drinking water?</p> <p>And if people don't TRUST the water coming out of their taps they will turn to bottled water - Singapore being a case in point. Thus creating a major problem with plastic bottles and all the environmental implications.</p> <p>Do I TRUST them to contain the leachate from the landfill when they pile into their chosen site at Broadmarsh? Again no!</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and</p>                                                                                                                                                                                                                                                                                                                                                                                                                      |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>When a contaminated land expert tells us that it will be virtually impossible to control the contaminates which will leak out into langstone harbour - they should listen. Enough damage has been done to the harbour with their sewage discharges! This is just not a sensible site for all this piling to build the plant along with tanks and pipelines.<br/>How can this ever pass the environmental assessment?</p> <p>I don't TRUST their calculations that this is the best value option for the customers.<br/>The costs of building the infrastructure needed for this project- the plant, shafts , pumping stations and the kms of pipelines has already spiralled to £1.2 billion! We all know who will be paying for this!<br/>The cost of actually running this will be astronomical - some have calculated £5million per year.<br/>How does all the energy needed to run this scheme fit in to this pledge to be net zero by 2050?<br/>SW:<br/>'We understand the important role we, and the water sector must play in reducing emissions ....<br/>We remain committed to achieving net zero by 2050'</p> <p>I cannot see how this pledge is compatible with the huge energy demands of effluent recycling.</p> <p>If they were really committed to the environment you would be ramping up looking for environmentally sustainable solutions- but instead these have been shelved. When anyone asks about any other solution they say it's been looked into but it's been dismissed. They then quote documents and appendixes without page numbers that are virtually impossible to find. Indeed those who have spent hours trawling through them have found cursory mentions and inadequate investigations into aquifer recharging and pushing back abstractions to the tidal limit to leave the water in the river as long as possible and virtually no mention of future smaller reservoirs.<br/>These are real alternatives to this environmentally unsustainable project.<br/>SW need to be forced to look into them seriously.</p> <p>They are trying to make the public think that this is the only option because they are determined to push ahead with this scheme - and this is just not the case.</p> <p>The recent months of rainfall and the fact that the amount of rainfall we receive each year has not declined- (just a changed seasonal distribution) leads everyone to the blindingly obvious fact that we have enough rainfall we just need to capture it rather than let it cause major flooding and then flow out to sea!<br/>Forecasters tell us there will be wetter warmer autumns and winters ahead.<br/>It is shocking that with all the rain we have in this country we only capture 1% of it.</p> <p>I put it to you that it is utter madness to be making potable water from sewage at great expense when we are letting fresh, free water go to waste.</p> <p>For the £1.2 billion that is the current estimated cost of this scheme to build ( let alone the £5million per year to run it) you could build 3 reservoirs which would have low running costs and</p> | <p>proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Regarding storing rainfall, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding the suggestion that three reservoirs could be built for the cost of Broadmarsh ERP, no detail is provided on proposed locations, capacities and volumes that could be reliably obtained. Therefore, we are unable to comment on the relative merits of HWTWRP compared to these schemes.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>would last up to 200 years. In a stroke you would solve many problems of flooding, you'd create extra fresh water habitats and of course aid the water supply issue.<br/>Why will they not even look into this?<br/>Is it by any chance because reservoirs and aquifer storage and leaving water in rivers until the tidal limit, do not give them the same return on their investment as all this infrastructure they want to build? Southern water are set to make £45 million profit from this scheme- of course they want to persuade everyone that it's necessary! Don't be fooled DEFRA!</p> <p>To support their case they talk publicly about the amount of extra water we need to find by 2050. This forecast seems to have come from:<br/>The very worst case scenario of demand.<br/>The very worst case scenario for population growth.<br/>The very worst climate forecast for droughts<br/>The most severe reduction in river abstractions.<br/>The worst x the worst x the worst etc leads you to pretty huge and probably unrealistic numbers which of course suit their case.<br/>In fact it's 2.9 billion litres of water.<br/>Is this correct that we need 5x more water in 2050 ? That seems incredible! Can we TRUST this figure?<br/>We do not need huge solutions now to meet demand in 2050 - it needs a phased approach that uses sustainable solutions.<br/>Fixing the leaks which accounts for 98.5 million litres per day might be a good start. With mains renewal by Southern water own figures being a shocking 1: 100 year replacement, no wonder the losses in leaks are so high.<br/>More ambitious targets are needed than as at the moment by 2050 they are still looking to be leaking 10% of all treated water.</p> <p>In a recent BBC article interview it was stated by a SW spokesperson that the brine by product of effluent recycling will have no effect on the harbour. This was extremely misleading to the public given that SW 's own environmental report admits that 'there is likely to be a significant effect' on the Solent protected sites.<br/>Once again the issue is TRUST . How can we TRUST that SW are open and honest about the effects of this scheme and not using half truths to push it forward and hoodwink the public.</p> <p>The whole TRUST issue is also an issue in the whole debacle of the Havant thicket reservoir. This was sold to the people of Havant as a leisure facility - a nature hub. Now it's basically an industrial buffer to mix the partially recycled water with spring water. I'm not saying that the water won't be technically clean but it is no longer the chalk filled spring water reservoir the people of Havant and Leigh park were promised.<br/>Not only are they not getting what they were led to believe they were but the population of Havant are going to have to deal with the disruption of the huge amounts of construction which will be going on - the EF plant itself- pumping stations, shafts and kms of pipelines below and above ground.</p> | <p>We have considered multiple combinations of growth forecasts, climate change impacts and Environmental Destination. This was covered in Section 5 of our rdWRMP24 technical report. The range of supply-demand balance scenarios in Water Resource Zone (WRZ) as shown in Annex 11 to our rdWRMP24 technical report, covered both extremes i.e. the combination of high growth, high climate change impact and high Environmental Destination (supply-demand balance Situation 1) as well as the combination of low growth, low climate change impact and low Environmental Destination (supply-demand balance Situation 9).</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a> It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| WRMP860   | <p>Sir,<br/> Protecting the chalk streams of Hampshire and West Sussex needs to be done by reducing the extraction of water from the aquifers. We are currently killing the streams.<br/> The current proposal for a water recycling plant looks to me to have significant environment impacts.</p> <ol style="list-style-type: none"> <li>1. Significant energy to run, considering it will hardly ever be needed.</li> <li>2. Increasing the concentration of sewage being pumped into the sea, including Langstone and Chichester harbour. I am a regular dinghy sailor in both these harbours.</li> <li>3. Potential for compromising the quality of the water in the havant resevoir.</li> </ol> <p>I believe other solutions should be looked into further.</p> <ol style="list-style-type: none"> <li>1. Using the aquifers to store water.</li> <li>2. Extraction of the spring water nearer to the coast.</li> <li>3. Fixing leaks.</li> <li>4. Joined up thinking between planning and water companies so new houses use less water by storing rainwater for certain uses.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>The company Water Resource Zones do not always extend to the coast as might be expected (e.g. especially in Hampshire), as the resource zones are distinct and separate from the physical infrastructure of the Water Supply Zones. Additionally, many coastal springs are often relatively small from a public supply perspective, and such spring discharges typically show a strong seasonality and decline significantly in summer periods. Or abstractions at these locations can be more prone to saline intrusion. So coastal springs general tend to offer poorer drought resilience and security of supply. Similarly, associated coastal wetland environments dependant on such smaller springs will also be drought sensitive. However,</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>such options (or those available within our water resource zones) will continue to be reviewed and reconsidered in future water plans.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, at the individual customer level. We are working with developers to recycle as much water as possible on new developments at the site level.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| WRMP861   | <p>Hello Defra, Southern Water,</p> <p>. I am an IT systems manager responsible for a group of UK manufacturing companies and a Stakeholder on the Havant Reservoir Project and a Portsmouth Water/Southern Water customer. I do not represent but do speak with the support of many members of our local Havant Thicket for Nature campaign group.</p> <p>SUMMARY</p> <p>I would like to notify you of my concerns about the plans to recycle effluent from [REDACTED] sewage works via new plant located on a former refuse dump and pump it to the (not yet constructed) Havant Reservoir and then to [REDACTED] treatment works near Winchester. We have been told the initial cost for the recycling plant and infrastructure is estimated at £1.2 billion, and this may have already increased to £1.3 billion.</p> <p>I have listened carefully to the Southern Water's arguments for water recycling, but I have not received satisfactory answers to our questions such as how much energy will be required to operate this equipment.</p> <p>It has been noted that the amount of water produced from £1.2billion effluent recycling will be less than the amount of water lost to leaks on the Southern Water network. How many environmentally friendly sustainable reservoirs can be built for £1.2billion? How much of the leaky infrastructure can be repaired for £1.2billion?</p> <p>To my knowledge, there is no environmental benefit to effluent recycling. There are many issues such as increased use of treatment chemicals, more concentrated outfall discharges, the carbon footprint and running cost for a 24x7 365 days plant that has to operate no matter rain or shine, drought or flood.</p> <p>The recurring argument (from Southern Water), for the environmentally damaging effluent recycling project, is that it will reduce extraction from chalk streams and ground sources. We can achieve the same result by building more reservoirs, using underground storage aquifers, moving extraction points, distributing water around the UK, fixing leaks. Southern Water should be investigating cheaper sustainable solutions.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>The UK is not a desert; we do not need costly energy intensive effluent recycling. We need to capture and store rainwater, fix leaks and install customer meters. Southern Water should spend money wisely on replacing our aging waste and water infrastructure.</p> <p>Perhaps we need to review privatisation rules so that our water companies are able to make a small profit from repairing our aging and failing infrastructure, fixing leaks and installing meters. My view is the effluent-recycling project is driven by the need to create a profit from expensive new infrastructure projects and this is wrong.</p> <p>I attended a Portsmouth Water Reservoir steering committee meeting today and heard about long term plans to construct up to 8 new reservoirs in our (SE) region, in addition to (even longer term) plans to fix leaks and install water meters. If we build more reservoirs, capture more rain and fix leaks, we do not need to recycle effluent. The majority of reservoirs in the UK have positive environmental impact and many benefits for wildlife; many are designated local nature reserves.</p> <p>We do not need to spend £billions on infrastructure so that Southern Water can make a profit for shareholders.</p> <p>I do not have confidence in Southern Water's ability to deliver safe water from recycled effluent. Please take this opportunity to make Southern Water rethink its plans, so that our money is spent wisely on sustainable, environmentally friendly long-term solutions that will resolve the potential/predicted water shortages. Do not approve this white elephant project.</p> <p>Kind regards<br/>Dave</p> <p>ADDITIONAL CONCERNS/QUESTIONS</p> <p>Southern Water seem to have shelved the option to complete a full review of the plan considering all alternatives stating, "A full re-appraisal exercise was not considered time or cost beneficial"</p> <p>With ever-increasing costs, delays, significant environmental effects, the lack of legacy and short life span, the effluent recycling scheme cannot represent best value for customers</p> <p>There may be a significant effect on the marine environment from the effluent recycling scheme. This must be investigated.</p> <p>Why are Southern Water not investigating moving the [REDACTED] abstraction point to the tidal limit, as this would be a more sustainable solution to improve flow and protect the river?</p> <p>Why have Southern Water been allowed to reject cheaper and more sustainable schemes because they cannot be delivered in time?</p> <p>Why are Southern Water not urgently investigating and planning for additional new reservoirs, despite this being customers preferred choice?</p> <p>Most customers are not aware of the proposed changes to our drinking water.</p> | <p>Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a></p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the</p> |

This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP862   | <p>Dear Sirs and Madams,</p> <p>Please look at the SW proposals with a jaundiced eye as they seem to ignore long term strategic needs of our communities whilst attempting to accumulate tradeable assets with which they seek to justify rewarding their shareholders at the expense of real progress towards a more secure (and environmentally friendly) water management network.</p> <p>Most notable of these areas is the long term proposals for the Havant Thicket reservoir and its associated infrastructure. Why, [ when one already knows of the failure rate, leakage, unresolved RO breakdown products, and unnecessarily long fetch and deliver [REDACTED] Havant, Southampton and [REDACTED] routes of the basic RO treatment system, ] are not the lower cost, environmentally friendlier, and geographically more relevant (and convenient) options acted upon - immediately!</p> <p>Underground storage reduces losses and is more publicly acceptable, long term pollution of our HT reservoir by the RO operation is avoided, and - best of all - this singular reservoir can in future capitalise on its unique asset - being fed by NATURALLY resourced water.</p> <p>Regards</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> |
| WRMP863   | <p>I wish to object to the entire approach of Southern Waters' plan for providing drinking water to Havant residents.</p> <p>It is going to be vastly expensive and unaffordable for residents.</p> <p>It completely ignores environmental and health concerns.</p> <p>It will certainly be providing toxic and dangerous untested solutions rather than the free solutions of rainwater collection and reducing the vast number of leaks.</p> <p>All of these concerns have been put forward to SW as sustainable and cheaper solutions which they have arrogantly ignored in the current plan.</p> <p>The concerns of the community and a huge no of specialists and researchers who have provided</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>their alternative suggestions and plans are supported by most of the consumers of the water SW intends to provide. But they have been totally ignored by Southern Water in the current plan.</p> <p>This plan should be rejected and a plan which provides sustainable solutions insisted on. They should not be allowed to go ahead with their appalling outrageous Plan!</p> <p>If Defra and the Government do not resist this disaster the community will be holding you to account too.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP864   | <p>Dear Sirs,</p> <p>I am writing as a customer of Southern Water, in response to the above referenced proposals that they have put forward for water management going forward, to insist that they develop a more sustainable plan that puts local people and the environment before profit. The mechanism by which the water industry is funded incentivises infrastructure heavy solutions, rather than development of sustainable solutions that work with climate change, and that exactly defines what Southern Water has done in response, with a plan that puts profit before customers, local residents &amp; the environment.</p> <p>It is particularly shocking that 19% of the water that customers have paid to treat is lost by leakage in the Southern Water distribution network. 100 million litres of water lost every day. Yet they do very little to manage it.</p> <p>It is also frankly ridiculous that we are contemplating schemes involving technological solutions &amp; installation of massive infrastructure that are incredibly costly both financially &amp; in environmental terms &amp; importing water from Norway, when the country is being deluged with rainfall that we only collect 1% of!</p> <p>The plan virtually ignores these issues &amp; instead appears to have been based on whatever presents as the best mechanism by which Southern Water can continue to extract money &amp; profit from 'water management'</p> <p>Southern Water's plan is taking us down the wrong path:</p> <p>Southern Water's £1.2 billion scheme is taking the essential requirements of managing waste water &amp; ensuring the consistent supply of top quality drinking water in a direction entirely to benefit Southern Water's interests. One thing our country &amp; county doesn't lack is rainfall and it is likely to increase. We need a plan that focuses on sustainable solutions that work with climate change and are about collecting it and storing water in new reservoirs and confined aquifers for use in dry summers. Not recycling sewage.</p> <p>It is frankly scandalous that we only collect 1% of rainfall in the UK. As well as supplying the water we need, collecting and storing more water in winter would provide multiple additional benefits such as helping to reduce forecast increases in flooding, providing recreational sites for our communities and biodiversity opportunities when building more reservoirs.</p> <p>Southern Water need to be far more ambitious on leakage reduction:</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>Southern Water loses a substantial amount of the water we pay them to collect &amp; treat. Figures show that 3% of the water they take from the environment is lost before even reaching the treatment works, and an additional 19% is lost after customers have paid to treat it because they currently fail to effectively manage leakage in the distribution network. More than 100 million litres every day. Southern Water must be required to deliver a proper programme of renewing water mains to replace their ageing pipe network as an absolute priority or they will never get leakage under control. A replacement rate of just 1 in 1000 years when a water main is only designed to last 120 years is totally inadequate &amp; would not be accepted as an equipment &amp; Infrastructure maintenance &amp; upgrading schedule in any other industry. So why is it accepted here?</p> <p>Southern Water cannot be trusted to operate &amp; maintain existing systems without causing pollution, what hope is there when far more complex technology and systems are involved?: Customers simply do not trust Southern Water. And particularly not in the context of installing complex technology required to treat final sewage effluent, previously untried for this purpose in the UK.</p> <p>They have an appalling track record of treatment plant and pumping station failures, many prosecutions for pollution incidents and failure to take prompt action to rectify problems. Customers and residents have had to put up with the consequences and that is with the existing technology.</p> <p>New technology and the manner of its introduction and installation presents even greater risks. Including the risk of pollution to the Havant Thicket Reservoir, which was meant to benefit and enhance our community, not just collect water, as well as damage to Langstone Harbour and the Solent. This is unacceptable.</p> <p>Southern Water need to do more to protect the environment, and develop a strategy that helps them honour their commitment to be carbon neutral by 2030:</p> <p>Our river catchments could be protected much more quickly if Southern Water moved river abstractions closer to the tidal limit, and abstraction boreholes down the catchment, reducing the priority for abstraction reform which is driving the need for effluent recycling.</p> <p>Long pipelines and their installation are damaging to our countryside and wildlife and are not required. Solutions need to be developed closer to where the water is needed.</p> <p>Also, the three planned effluent recycling plants, documented for use as a 'drought resource', will require huge amounts of energy, having to operate year round, even when the water is not needed, in order to maintain the 'sweetening flow' needed to keep the pumps, pipelines and membrane filters in good working order.</p> <p>Southern Water must explore &amp; develop options that do not have such a high carbon and emissions footprint. We need a strategy that prioritises low energy solutions. Energy alone for the Hampshire scheme will cost more than £3 million/year. With pumping and treatment needed 365 days a year. So, costly &amp; environmentally damaging.</p> <p>The risks from developing the effluent recycling plant on a landfill are unacceptably high: If despite all this Southern Water are to go ahead with their plan, they must be told to find an alternative site for the recycling plant at Havant. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great.</p> <p>There has been inadequate publicity and consultation about Southern Water's plan:</p> | <p>our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated. Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household</p> |

## Water Resources Management Plan 2024 Statement of Response

### Annex 3: Our responses to feedback from the general public

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>I found out about the consultation on Southern Water's plans through a friend. They will impact on Southern Water &amp; Portsmouth customers across the region and represent a major change to our water supply. Yet as captive customers we have been told nothing by them. Customers should have been written to at every stage, involved in the process &amp; opinions should have been properly canvassed.</p> <p>Research shows that customers prefer more natural &amp; sustainable solutions such as reservoirs and aquifer storage, but Southern Water have not asked, let alone listened</p> <p>Hampshire effluent recycling scheme alone will deliver a profit of about £45 million to Southern Water, this kind of profiteering paid for by customers is not acceptable. I suspect this might go some way to explaining why customers have been largely kept in the dark.</p> <p>Further, three of their new effluent recycling plants will be designated 'Nationally Significant Infrastructure Projects' and will bypass the Local Planning Authority process by applying directly to the Planning Inspectorate for Development Consent Orders. So further shielding their activities from residents and the customers who pay their bills and who they profit from.</p> <p>The plans should be rejected and Southern Water required to think again and this time, consult properly with customers.</p> <p>Regards</p> | <p>and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP865   | <p>Dear DEFRA Water Resources,</p> <p>Effluent Recycling Plans: Havant Thicket Reservoir, [REDACTED] Water Treatment and other schemes proposed across the SE of England.</p> <p>Please add me to your list of OBJECTORS</p> <p>The capital and running costs of these schemes are horrendous in both environmental and financial terms.</p> <p>AND will further turn people to bottled water - millions more plastic bottles and unsustainable transport miles. I remember the complaints of bad taste of the water supplied by the [REDACTED] [REDACTED] [REDACTED] [REDACTED] [REDACTED] West Sussex). compounded by the need to heavily chlorinate the already badly tasting water due to Cryptosporidium. I understand a pipeline is proposed from Havant Thicket Reservoir to [REDACTED] with another from the [REDACTED] Sewage Treatment Works. Horsham too.</p> <p>The public do not trust the Osmosis Process, which relies on a delicate membrane liable to clog up and fracture.</p> <p>The Schemes, at best, are not a long-term solution requiring whole plant replacement within a few decades, and pumping vast quantities long distances 365 days a year.</p> <p>A probably overlooked problem caused by the recycled sewage enrichment into Havant Thicket Reservoir is algal blooms - including the toxic blue-green algae. A longstanding, recurring</p>                                                           | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment, supporting wildlife, particularly in a drought.</p> <p>Regarding possible algal blooms, purified recycled water is extremely clean. Water quality in Havant Thicket reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This would also require the entire housing stock across our supply area to undergo modifications in</p> |
