---------------------|
|           | <p>Southern Water have a very poor record and have consistently put profit before performance letting down their customers over many years as permitted by weak to non-existent regulation. Recycling sewage water into drinking water carries risks to the consumer and when the profit motive, as driven by the Southern Water overseas owners, kicks in, then the health of many hundreds of thousands of customers could be put at risk. The proposed reverse osmosis equipment will require constant operation and maintenance and the pressure to cut corners and save money will be ever present.</p> <p>Climate change is being driven by unsustainable consumption of resources and the Southern Water recycling scheme is both costly on this measure for both the installation of the large amount of required site construction and connecting pipe work and then running the recycling equipment. Thus Southern Water will be contributing to climate change at a time when they should be looking to reduce their carbon footprint.</p> <p>The proposal to site the recycling scheme on a land fill site comes with additional risks, with the need to find solid foundations and possibly contaminate underground water supplies.</p> <p>Many people are already sceptical about the source and content of their drinking water, and if this scheme is allowed, then there will be a big increase in the purchase of plastic water bottles, with the subsequent increase in plastic bottle waste, which is already a blight on the environment.</p> <p>Defra should reject this scheme and also not permit any reapplication for recycling sewage water into drinking water.</p> | <p>provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities. Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. Our estimated cost for Havant Thicket Reservoir is included in our Water Resources Planning tables.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Regarding funding mechanisms, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders</p> <p>We are financially resilient and maintain a strong liquidity position, with the strong backing of our shareholders They have injected more than £1.6 billion of fresh equity into the Southern</p> |

| Reference | Feedback | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           |          | <p>Water group since they joined in 2021, and this financing has allowed us to spend £3bn during 2020-25 (or £1,500 per household) and implement our Turnaround Plan, to deliver for our communities and the environment.</p> <p>We acknowledge the ongoing challenges and uncertainty faced by all companies operating in the UK water and wastewater sector, but we are confident in our ability to deliver what we have set out in our future investment plans and that when the Competition and Markets Authority (CMA) makes its PR24 determination it will provide sufficient funding for the investment in the 2025-2030 period.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We</p> |

Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP481   | <p>Dear Sirs. I am appalled by the thought that Southern Water may be permitted to recycle the effluent from my home, then sell it back to me as drinking water. It is bad enough that they tip sewage directly into the sea for all to swim in.....</p> <p>What a waste of money to create a system that nobody wants and even fear for their safety. Do not proceed with this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| WRMP482   | <p>I am writing to formally object to the water plan proposed by Southern Water. I believe that the suggested plan is fundamentally flawed and not in the best interests of our community and environment. There are several compelling reasons why this plan should not proceed as currently proposed:</p> <ol style="list-style-type: none"> <li>1. Large Upfront Cost: The initial financial outlay required for this project is significantly high. Such a substantial investment could be better allocated towards more sustainable and cost-effective water management solutions. This plan places an undue financial burden on the local community and taxpayers.</li> <li>2. Large Ongoing Upkeep: The proposed plan entails considerable ongoing maintenance costs. These recurring expenses will strain resources, diverting funds from other essential services and infrastructure improvements. The continuous upkeep required raises concerns about the long-term financial viability of the project.</li> <li>3. Large Ongoing Energy Requirements: Implementing this plan will result in substantial energy consumption. The ongoing energy requirements contribute to increased operational costs and heightened environmental impact due to higher energy usage. In a time when we should be prioritizing energy efficiency and renewable sources, this plan seems counterproductive.</li> <li>4. Biodiversity and Environmental Damage: The chalk spring-fed reservoir, a critical natural resource, is under threat from this proposed development. The potential biodiversity loss and environmental degradation cannot be overlooked. The unique ecosystem supported by the chalk spring would be irreversibly damaged, leading to the loss of flora and fauna that are crucial to our local environment.</li> </ol> <p>In light of these issues, I urge Southern Water to reconsider the current proposal and explore alternative solutions that prioritize financial prudence, energy efficiency, and environmental</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1) Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24).</p> <p>The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie</p> |

|           | <p>preservation. It is imperative that any water management plan we undertake does not compromise the ecological integrity or economic stability of our community.</p> <p>Thank you for considering my concerns. I look forward to hearing your response and hope for a more sustainable approach to our water management needs.</p> | <p>Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>2) We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</p> <p>The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>3) Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions.</p> <p>Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>4) Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> |

However, those conventional sources are no longer available to us as they once were.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable.</p> <p>Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. As a major abstractor of water in the South East for public supply, and with responsibility for the conveyance of wastewater from homes and businesses for treatment before it is returned to rivers or sea, Southern Water plays a critical role in carrying out these duties whilst protecting and enhancing the environment. Further information and reports on how we achieve this can be found on our website <a href="https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/">https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/</a></p> <p>We thank you for your engagement and feedback with our rdWRMP24 consultation. Your comment has been noted. Our website will contain the development of our WRMP24 and, going forward, our WRMP29.</p> |
| WRMP483   | <p>Dear Defra</p> <p>While I have made representations to other bodies, I feel that I must make a representation to yourselves as the wrong decision on Southern Water's plans could have a devastating impact on us.</p> <p>Repairing leaks</p> <p>If Southern Water put more effort into leak prevention, over 20% of the available water which is lost through leaks could be saved. I have examined Southern Water Services Limited statutory accounts and note that the company has remitted over £3 billion to group companies when at least a significant portion of these funds could have been used to seal the leaks. Southern Water have chosen price rises instead.</p> <p>Sustainability</p> <p>I have always believed that to minimise costs, our infrastructure companies must deliver sustainable solutions that are good for the environment. Having been to school and being</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>In response to the point about group companies, the highly regulated nature of the industry means we cannot secure the borrowings used to fairly fund investment against the operating company and thus we necessarily have financing arms which borrow money on Southern Water Services' behalf. Money raised from borrowers is paid to the operating company to finance activity and repayments are therefore made from bills paid by customers to the operating arm. If we did not borrow, then investments would have to be paid exactly as they were made—meaning that customers who moved away or are deceased would be funding</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>taught about the local aquifers, and their abundant supply of good pure spring water, I question why Southern Water are even considering building a treatment plant.</p> <p>I am sure that you are aware of the regular flooding that occurs in the Southern Water area. We must investigate the aquifer solution to store and use this water, rather than treatment plants that will require regular capital spending.</p> <p>Contamination at the proposed treatment plant site</p> <p>I lived and have worked close to the landfill site, and I recall my employer at the time being given very clear instruction about ground water contamination on a proposed new manufacturing facility. I am therefore extremely concerned that the proposed recycling plant is going to be built on the landfill site, with deep piles and tunnels being constructed within the detritus and waste. I am very concerned that such a facility would leak contaminants into the soil and the aquifers below. We know from experience, that Southern Water cannot be trusted.</p> <p><a href="https://www.bbc.co.uk/news/articles/cn4zknwpg77o">https://www.bbc.co.uk/news/articles/cn4zknwpg77o</a></p> <p><a href="https://www.theguardian.com/environment/video/2021/oct/26/drone-footage-shows-sewage-pumping-into-sea-in-hampshire-conservation-area-video">https://www.theguardian.com/environment/video/2021/oct/26/drone-footage-shows-sewage-pumping-into-sea-in-hampshire-conservation-area-video</a></p> <p>I do not believe Southern Water could construct a recycling plant in a safe manner, and in any case, I prefer the aquifer solution.</p> <p>Water Storage</p> <p>The Southern Water solution involves using huge electric pumps to transfer water over large distances. Surely a more sustainable and less costly solution if to have water storage facilities closer to where the water is used?</p> <p>Financing and Water Bills</p> <p>I mentioned in Repairing Leaks, that Southern Water were cash rich, but diverted £3 billion out of their operating company. I believe these funds should be returned to Southern Water Services Ltd to be used for capital investment and leak repairs. There is absolutely no need for the Government or Southern Water customers to fund the necessary infrastructure investment as Southern Water had those funds, and funding should come from a capital injection from shareholders as profit was taken out of Southern Water Services in the form of interest and dividends.</p> <p>Summary</p> | <p>improvements they never benefited from. Our borrowing is regulated by Ofwat, which ensures a prudent approach is taken.</p> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply–demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option. Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO), with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29, in addition to considering locations for new reservoirs.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. In its business plan for the next five-year regulatory period, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the company’s history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short, sharp improvement in performance across the board, and</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | So please, I ask that alternative solutions are investigated to the provision of water, and that DEFRA be mindful and not to bow to Southern Water's sole proposal which is in the best interests of their company, but not us residents and customers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP484   | <p>I am writing to you to voice my concerns about the Havant Thicket Reservoir and Effluent Recycling plans.</p> <p>Fundamentally this does not seem to be a project focusing on the supply of fresh water rather a project to build poorly thought out infrastructure with the main aim to bring profit to the shareholders.</p> <p>As a country we need to be focusing on more sustainable ways to meet our everyday needs including the provision of fresh water. This aspect has been completely overlooked for this project and Southern Water's plan is taking us down the wrong path.</p> <p>These are the main reasons why I object to the plan.</p> <p>Expensive – why have cheaper less damaging options not been proposed such as rainwater capture into reservoirs and aquifers., moving current extraction points from rivers to just above the high tide limit thus reducing the impact on the ecology of our rivers as well as having the water extracted closer to where it is needed.</p> <p>A risk to our environment - The carbon emitted will be considerable for both the construction of the plant and the pipeline as well as for the 60 years of planned operation. The emissions will mean that Southern Water will not be able to meet its carbon reduction commitments by 2030.</p> <p>The huge impact on the environment and biodiversity resulting from the construction of the plant, the pipeline to and from Havant Thicket Reservoir, the 40 mile pipeline to [REDACTED] through countryside and requiring the destruction of hedgerows and the felling of trees. Not to mention the effect of pumping treated water into the unique biodiverse habitat being created at the Havant Thicket Reservoir using naturally occurring spring water changing the natural make of the water, introducing contaminants and changing the temperature.</p> <p>Not the best option available – why have other better options not been fully explored or proposed including alternative sites for the effluent recycling plant (if it is needed at all). If despite all of the concerns about whether effluent recycling is needed, the significant environmental impacts, and the enormous costs to build &amp; operate are to be ignored, Southern Water are to go ahead with their leaky plan, they must be told to find an alternative site for the recycling plant at Havant. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great.</p> <p>It creates a bad precedent that will support other bad schemes - Water supply companies are permitted to profit from new infrastructure, so this scheme offers a chance to make significant profits.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plants can be built in a modular fashion—i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for customers and the environment in terms of meeting anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next five years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulates the amount of profit that water companies can make, which for the next five years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed a step-change in investment amounting to approximately £8 billion. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations, the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this necessitates investment in large-scale infrastructure schemes which, while benefiting long-term security of water supply and the protection of freshwater ecology and habitats, may have an increased carbon impact.</p> |

|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                                                                                                   | <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options proposed in our WRMP24 strategy.</p> <p>A Water Recycling Plant would typically be expected to last more than 60 years, with upgrades to electrical and mechanical components every 10–20 years.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocating the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in Havant Thicket reservoir and the Solent, as well as potential mitigations.</p> |
| WRMP485   | To whom it may concern<br>I am writing in response to the consultation on the Hampshire effluent recycling scheme via Havant Thicket reservoir which Southern Water are proposing. I have many concerns which are | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding rainwater storage, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>mainly environmental in nature but also as a Southern Water customer who is worried about rising bills and inappropriate use of monies.</p> <p>We usually have plenty of rain in this country and the priority should be given to storing rainwater, not recycling waste water. These schemes are normally used in countries where water is scarce. I understand that use will be made of a landfill site for the effluent recycling plant, which will mean that toxic chemicals can leak into Langstone harbour and reject water discharged into the Solent. There are other more suitable sites.</p> <p>It is also reported that there will be no independent monitoring of the water discharged into the reservoir, harming wildlife and customers if the stored water is used by Portsmouth Water in times of drought.</p> <p>The scheme is also not sustainable as the extra pipe laying and transport costs will be huge, an estimated minimum £1.2 billion. Which is not a good use of customer's money. I am led to believe however that shareholders would benefit! Also the public will be wary of using tap water and many will resort to using bottled water which has a high environmental cost in terms of plastic usage.</p> <p>As a Southern Water customer I have long been concerned about sewage discharges and previous lack of investment in sewage treatment and water leakage. I would urge Southern Water to listen to their bill payers and do the right thing by stopping this scheme and exploring more cost effective and sustainable solutions.</p> | <p>butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. We</p> |

|-----------|----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                  | <p>have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>With regards to the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. Regarding funding mechanisms, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report. Ofwat regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges. Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="#">Our Drainage &amp; Wastewater Management Plans (DWMPs)</a>.</p> |
| WRMP486   | I am writing to lodge my opposition, as a local Emsworth resident to the plans for wastewater recycling linked to the reservoir. | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>I believe the nature of the plans were surreptitious, and covert. Agreeing planning with HBC for a "recreational lake" only to subversively change the nature of plans to something more sinister without an overtime consultation.</p> <p>I believe most residents are not fully aware of the proposed changes, that the consultation has not been adequately publicised or explained, and that the change of use of the reservoir is attempting to be backdoored before local people understand the impact and implications.</p> <p>My major reservations around the plan include:</p> <ul style="list-style-type: none"> <li>-No clarification or justification on why rainwater recycling is not being considered in one of the countries with lowest capture and highest rainfall!</li> <li>-how we can trust southern water, imposed with multiple sanctions for environmental breaches as custodians of our future drinking water</li> <li>-after the loss of what should have been a community environmental space (the avenue), we are not only losing this, but contributing to increasing environmental degradation with a plan that requires fossil fuels and construction at further impact to the local environment.</li> <li>- the failure to address the leaks in the existing network, which (albeit at huge cost), seems to in no way impede dividends for shareholders per annum. Fixing leaks would give us all the water we need given they currently lose a fifth or more through poor maintenance of their network.</li> <li>-the level of pollution at [REDACTED] is already at a completely unacceptable level. As someone who has been resident in the area for 42 years, I can visibly see the denigration of water quality, this has been evidenced by the samples taken by the final straw charity which made national news.</li> </ul> <p>We stand on the edge of a precipice. Much of what makes the area special and alluring hangs precariously in the balance. To hand the keys to that tipping point to an organisation that has routinely demonstrated that it is not fit to be trusted with it's existing mandate is nothing should of madness.</p> <p>I implore you to please oppose the plans to use recycled sewage to provide water, and uphold a mandate on a recreational lake for the local area and environment to utilise, forcing Southern to explore more considered and environmentally friendly solutions to their plans.</p> | <p>'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>Our consultation involved 8 roadshows throughout our supply area. Here consultees could visit and speak to the team directly. We also undertook 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation.</p> <p>All of these activities were publicised on our website and on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information</p> <p>We fulfilled the expectations from planning guidance regarding our visibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <ul style="list-style-type: none"> <li>- Regarding rainwater recycling: reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</li> </ul> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <ul style="list-style-type: none"> <li>- We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme</li> </ul> |

| Reference | Feedback | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           |          | <p>ever for the years ahead after listening to our customers: <a href="#">Our Business Turnaround Plan   Southern Water</a></p> <ul style="list-style-type: none"> <li>- The water recycling proposals are not expected to impact the proposed recreational use of the reservoir. Portsmouth Harbour WTW is already in existence. The water recycling plant will be sympathetic to Broadmarsh Coastal Park and views from Langstone Harbour without compromising functional or safety requirements.</li> </ul> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <ul style="list-style-type: none"> <li>- On leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</li> </ul> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. Our PR24 Price Review is being redetermined by the CMA.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions. In AMP8 we are investing £90m on natural solutions, including habitat and biodiversity improvements, reduced risk of spread of invasive non-native species, in river enhancements, catchment management with the agricultural sector and Catchment Partnerships, chalk stream enhancement and SSSI management. This is a long term programme that started in AMP6, and natural solutions are embedded in our long term delivery plans.</p> |
| WRMP487   | <p>Dear Defra,</p> <p>I have read many pages about the proposals from Southern Water to increase the water supply. While I do not disagree in principle to recycling effluent, it is a very expensive option. Much more emphasis should be given to increasing water storage from winter rain, replacing old water mains to decrease leakage and reducing the use of potable water for applications for which it is not necessary. I appreciate that water is a precious resource and we should all try and reduce our consumption of it.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>Regarding cost, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP488   | <p>It is strange how often the subject of water comes up in conversations in the UK, far more than any other country I know. We live in an environment famous for its precipitation. Any foreigner who thinks of England thinks of men with umbrellas. Yet despite all our rain fall we appear to be unable to manage our water supply to houses, the natural environment and industry. Also despite the fact that we live in a beautiful island we have little concern over discharging untreated sewage into areas of nature conservation without any repercussion for those responsible.</p> <p>I regularly swim in the sea in Chichester harbour and have to keep an eye on the discharge that has occurred to know if I am relatively safe to swim here. Apparently you replied to my husband saying the discharge is okay because it is dilute????? Do you swim in it? Would you put your face in it? Would you like your dilute discharge dumped on your doorstep?</p> <p>I now hear that you are considering plans to get more safe water to our homes. I think this idea is commendable. Now lets think about how you are going to do it.<br/>With an average of 732mm of water per square meter each year, I am sure you can work out how to collect and store some of this. The Romans used Cisterns to collect the water - simply a hole/basin dug into the ground. The Inca used reservoirs, Cisterns and Qochas to collect the water. The use of wells is well known (pum unintended). The ancients even reused their dirty water to irrigate the land which serves several puposes including drenching the soil. fertilizing it and helping to clean it up before it got into streams and rivers. Soft soil is better at absorbing the rain so that it helps avoid flooding.</p> <p>I'm pretty sure with our tchnology we can work out how to build more reservoirs, and underground storage sites.<br/>We could reintroduce more boggs and wetlands to reduce the flow of water causing flooding.<br/>Plant more trees to help slow the water flow in floods.<br/>We should be making all our houses have two water systems, one for grey water for flushing toilets and one for clean drinking water.</p> <p>The romans and many other ancient civilisations used a variety of plumbing techniques to transport water, understanding the value of this rare and precious resource. Surely we can distribute it to customers without losing nearly 20% of it. Try fixing the pipes we have. Less water lost means more water available, simple logic.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers. <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This will also require the entire housing stock across our supply are to undergo modifications in internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level.</p> <p>Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations).</p> <p>The Havant Water Recycling Treatment Plant (HWTWRP) scheme is designed to provide water resources during severe and extreme droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.</p> <p>We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions.</p> <p>In AMP8 we are investing £90m on natural solutions, including habitat and biodiversity improvements, reduced risk of spread of invasive non-native species, in river enhancements, catchment management with the agricultural sector and Catchment Partnerships, chalk stream enhancement and SSSI management. This is a long term programme that started in AMP6, and natural solutions are embedded in our long term delivery plans.</p> |

|           | <p>Build more water treatment sites. We all know you are not responsible for the excessive rate we are building houses in areas that can barely manage the current supply of dirty water. You are however responsible for getting more treatment sites built. Lobby the government to get this a priority before they press ahead with another 10,000 houses in Emsworth.</p> <p>Since rising global temperatures are the main reason for the excessive rainfall we appear to be getting, I find it surprising that you would choose an option that increases the production of carbon dioxide. Surely you are just adding to the problem.</p> <p>In summary</p> <ol style="list-style-type: none"> <li>1. build more treatment centres.</li> <li>2. fix the leakages</li> <li>3. build more reservoirs or underground storage sites.</li> <li>4. stop discharging sewage into the environment.</li> <li>5. Choose carbon neutral methods.</li> </ol> | <p>1. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases.</p> <p>The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</p> <p>The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities. The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by Defra and our regulators. We will continue to do so.</p> <p>Our plan has been produced in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years. This process allows for changes to be made to the WRMP to account for new information and consultation feedback.</p> <p>In rare cases, for example, where there are unresolved issues and substantial public interest exists the Secretary of State may call an inquiry or hearing.</p> |

|-----------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>2. Regarding leakage reduction, The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period.</p> <p>We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>3. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>4. Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>The plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>5. Our capital programmes are delivered in line with our regulatory commitments and operational needs. Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p>                                                                                                                                                                                                                                                                                       |
| WRMP489   | <p>This plan by Southern Water to add treated affluent to our drinking water is going to cost millions of pounds to install and maintain, and in a relatively short time need replacing and we, the customers , will pay for it.</p> <p>There are other ways of providing the water need that are cheaper and more environmentally friendly, need less maintenance and will still be in place in the future....ie reservoirs.</p> <p>Currently we collect only 1% of the generous amount of rain that falls. That is so wasteful!</p> <p>Can we trust SW to run and maintain this scheme they are suggesting? Their record of dealing with our waste is abysmal.</p> <p>I suggest we do not want this plan and ask you to reject it.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding cost, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time.</p> <p>Regarding alternative options, We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We</p> |

We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP490   | <p>Dear Sir , Madam,</p> <p>I am alarmed to discover that S. Water are proposing to introduce “final treated effluent “ at the Havant Thicket Reservoir and strongly disapprove of this scheme.</p> <p>This is a complex &amp; costly technology with a high risk of damage to the environment by potentially polluting the reservoir, Langstone Harbour &amp; the Solent.</p> <p>Given S Waters reputation for inadequate investment in the physical infrastructure , numerous prosecutions for ongoing pollution along our coastline, poor maintenance of treatment plants and failing pumping stations, I dont feel that they be trusted with this untested scheme in the UK, which has a carbon &amp; energy cost of £3 million per year?</p> <p>I am very concerned about the quality &amp; safety of the water processed in this manner which will be used not only in Hampshire but also transferred to West Sussex. It would be a retrograde step should people consider the need to use bottle water.</p> <p>I feel it would be better to apply more sustainable &amp; less damaging solutions to improving the ailing system by building new reservoirs &amp; using confined aquifers to collect &amp; store more “ free” rainfall , which would also reduce flooding.</p> <p>These storage facilities should be built closer to where the water is needed so that long pipelines that damage our countryside &amp; wildlife are not required.</p> <p>Concentrating on reducing the daily leakage of 100 millions litres of water by replacing the old pipe network with new water mains for which they have already received considerable amounts of government funding , would also be of greater value to the environment &amp; S. Water customers.</p> <p>I was unaware of this “refreshed proposal “until advised by a friend this week. ( Nov 20th 2024) Were S. Water obliged to inform its customers of these plans?</p> <p>If so ,how &amp; where?</p> <p>With a deadline of December 4 th 2024 to respond I am fearful that many residents do not know about &amp; have not seen plans nor maps of the proposals regarding effluent recycling.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were no taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators’ Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> |

|           | I strongly encourage you to reject this proposal & put greater pressure on S.Water to develop sustainable solutions that put the environment & customer preference before profit. | <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our <a href="#">Net Zero Plan</a> will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a>.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |

|-----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We also released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>We have received 1176 responses as part of rdWRMP24 consultation.</p> <p>The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and</p> |

We will continue to do so. Our plan has been produced in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years. This process allows for changes to be made to the WRMP to account for new information and consultation feedback. In rare cases, for example, where there are unresolved issues and substantial public interest exists the Secretary of State may call an inquiry or hearing.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>Regarding our schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |
| WRMP491   | <p>I request that you reject Southern Water's ridiculous, expensive, not sustainable and damaging plans in Hampshire.</p> <p>I do not support Southern Water's here in Hampshire at the Havant Thicket Reservoir. Their plan does not develop sustainable solutions and certainly does not work with climate change to collect the forecast increase in rainfall and store it in new reservoirs. This could reduce flooding too. Southern Water should already be reducing their ridiculous amount of leakage.</p> <p>Southern Water already have a dreadful record for allowing the pumping of effluent into Langston Harbour, what guarantees would we, the customers, have that Southern Water would safely operate such a complex plan. We have no faith that would happen.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Regarding sustainability and climate change, we conduct an options appraisal process, wherein all options are considered regardless of size. The options presented in the plan represent, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination. The Water Resource Planning Guideline requires WRMP24 to be a Best Value Plan i.e. a plan that aims to deliver wider benefits to society and the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>The long pipelines suggested in this plan would only succeed in damaging the countryside and harm our precious wildlife. This is not acceptable! Neither is the cost involved.</p> <p>Finally effluent recycling is NOT what we and I suspect most people would drink. That would only increase the use of single use plastic in the shape of bottles. That is what has happened in two other countries.</p> | <p>environment, by taking account of a wide range of factors, alongside economic cost, in identifying the preferred water resource programme.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Regarding pipelines, our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP492   | <p>I wish to object to the current plan by Southern Water regarding the use of recycled sewage effluent from [REDACTED] .</p> <p>I am one of very many people extremely worried about the environmental aspect of this scheme. There seems to have been very inadequate consumer and public consultation about the long-term wisdom and also the huge costs involved concerning these plans, and we are aware that that there are cheaper alternatives which might provide a better deal but which have not been properly considered.</p> <p>Concerns have already been expressed about this plan increasing the intensive energy security around the planet.</p> <p>There is also a real risk that the work needed at Langstone Harbour and at Broadmarsh will result in a totally unavoidable and unacceptable environmental risk to the area around the harbour.</p> <p>Why has Southern Water not developed more and better solutions to store free natural water and why especially have they not improved their system of improving leakage reduction.</p> <p>Because there is no independent monitoring of pollution planned, there is a risk of pollution from the recycling plant if it is not properly maintained by Southern Water.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Regarding consumer and public consultation, in addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>We have received 1176 responses as part of rdWRMP24 consultation.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the</p> |

|           |          | <p>sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>On developing reservoir storage, our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. However, it is worth noting that reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option</p> <p>On leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP493   | <p>Dear Sirs,</p> <p>I write in response to your revised water resources management plan proposed by Southern Water, I strongly suggest that Southern Water take a more realistic view of the water resources position and produce a more sustainable water management plan.</p> <p>I would urge them:</p> <ol style="list-style-type: none"> <li>1. to abandon, altogether, the effluent recycling scheme, an abhorrent, environmentally damaging and extremely costly plan.</li> <li>2. to abandon, also, such stop-gap, expensive and environmentally damaging measures such as the ridiculous idea of bringing tanker loads of water from Norway.</li> </ol> <p>Instead, I would suggest that:</p> <ol style="list-style-type: none"> <li>A. An intense programme of repairing and stopping leaks should be prioritised. It seems a very poor plan to merely reduce leakage by 53% by 2050.</li> <li>B. Our precious chalk streams and rivers should be guarded and protected, instead of them being robbed and polluted.</li> <li>C. The capture and storage of our prodigious winter rainfall should take precedence, which in turn would thereby reduce disastrous flooding.</li> <li>D. Schemes to increase water storage capacity at existing works should be prioritised.</li> <li>E. The idea of a free water butt scheme for customers, as trialled in the Isle of Wight, is admirable. Everyone could do a little more to conserve the water supply.</li> </ol> <p>Finally, the effluent recycling scheme cannot represent the best value for customers. It would be exceedingly expensive. There are many ways, some of which are mentioned above, of using those costs in a far better, more environmentally satisfactory way, instead of in one which is wholly repugnant.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. With regards to the environment, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</li> </ol> <p>Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>With regards to cost, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <ol style="list-style-type: none"> <li>2. Regarding the viability of sea tankering, it is no longer included in our plan.</li> </ol> <ol style="list-style-type: none"> <li>A. Regarding leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</li> <li>B. We note the objection to the use of recycled water in Havant Thicket. We acknowledge your desire to protect the Chalk streams. A further consultation on water quality was held in Spring 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</li> </ol> |

|-----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>As the environmental regulators of the water industry, the Environment Agency and Natural England have provided detailed comments regarding the Environmental Assessments for the WRMP. Work is being undertaken by our environmental consultants to these comments and make any necessary changes to ensure that the assessments align with regulatory requirements.</p> <p>C. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>D. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>E. Based on typical rainfall in the UK, by fitting a water butt to your gutter and downpipe, you could save up to 24,000 litres of water a year – which is one reason that our business customers are able to claim a free water butt from us: <a href="https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/">https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/</a></p> <p>Slow-drain water butts are also effective in reducing water run-off and decreasing the pressure on storm sewers, as our pilot scheme on the Isle of Wight has shown, and where we have now installed over 4600 water butts: <a href="https://www.southernwater.co.uk/latest-news/free-water-butt-initiative-expands-to-gurnard-on-the-isle-of-wight/">https://www.southernwater.co.uk/latest-news/free-water-butt-initiative-expands-to-gurnard-on-the-isle-of-wight/</a>. These water butts have a drain installed halfway up, allowing the top half to slowly drain into the network over several hours. This way around 100 litres is left empty for the next time it rains. Following the success of the pilot scheme, this is now being replicated in Kent, where we are installing more than a thousand free water butts to help reduce storm overflows in Whitstable, Deal, Swalecliffe, Margate and in Fairlight, East Sussex.</p> <p>Regarding value, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP495   | <p>I refer to Southern Water's plans to re-cycle sewage effluent into supplies of drinking water.</p> <p>It is my understanding that Southern Water's plans have not previously been put into effect in any other area in the UK. From this I would conclude that Southern Water have not realistically considered the many alternative options that could be used to ensure adequate supplies, all of which would be environmentally friendly.</p> <p>In particular I consider that Southern Water should be compelled to improve:</p> <ul style="list-style-type: none"> <li>~ reduction of leakages (say halving the current level of leakages by 2035 instead of 2050)</li> <li>~ introduce plans to increase the level of rainfall collection. I do not know what might be a reasonable level, but certainly should be far in excess of the present 1%.</li> <li>~ reduce the level of effluent / sewage released into the sea by increasing storage areas for use in times of high rainfall.</li> </ul> <p>It seems that whilst private individuals are encouraged and in many respects required to act in an environmentally responsible manner, the same restrictions do not apply to Southern Water.</p> <p>Whatever of the various options available to Southern Water are decided upon, their performance should be monitored and failure should result in withheld dividends / loss of director bonuses.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>On considering alternative options, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can.</p> <p>On leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <ul style="list-style-type: none"> <li>- We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</li> </ul> |

|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                                                        | <p>On increasing reservoir storage, our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. However, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable.</p> <p>Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>Regarding monitoring, the Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>Regarding profit, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |
| WRMP496   | What a pity Southern Water continue to get solving these such important issues in a manner that clearly ignores other professional bodies who have given their advice! | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| WRMP507   | <p>Good day,</p> <p>We wish to raise our concerns over Southern Water's proposal to use recycled sewage effluent to top up our water supply. From previous records, Southern Water are often responsible for sewage leaks so how can we trust that any treated water would be suitable for drinking? If they spent the funds required for the treatment plant on leak repairs and rain water collection, there would be far less need to top up the water supply from the sewer.</p> <p>Southern Water should put the wellbeing of the customers before profit and the impact on the environment should be top of their list.</p> <p>We would not have confidence that Southern Water would provide clean drinking water from 'treated' sewage and feel that we have sufficient rain fall, which if collected in the large new reservoir at Havant Thicket (paid for by local water rate payers) should be enough to supply the local area.</p> <p>Please consider our concerns when making the final decisions regarding Southern Water's latest plan.</p> <p>Thank you and kind regards,</p> | <p>We thank you for your engagement and feedback with our rdWRMP24 consultation. Your comment has been noted. Our website will contain the development of our WRMP24 and, going forward, our WRMP29.</p> <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink.</p> <p>We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>On leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Regarding profit, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. However, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives</p> <p>For information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> |
| WRMP508   | <p>I wish to strenuously object to the effluent recycling scheme proposed by Southern Water, i.e. the plan to build a new wastewater recycling plant close to the [REDACTED] site and pump 'treated' recycled water up to the Havant Thicket Reservoir.</p> <p>When the plans for Havant Thicket Reservoir were proposed under Portsmouth Water's oversight I was concerned about the effect on wildlife and nature, but never imagined that Southern Water (who were fined for deliberately discharging raw sewage)<sup>1</sup> would become involved. The idea that recycled sewage effluent would be added to water stored at the Reservoir fills me with horror.</p> <p>Southern Water have already demonstrated that they are an unserious and untrustworthy company which has been systematically polluting (amongst many other places) Langstone</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback, and we note your objection to the Hampshire Water Transfer and Water Recycling Project (HWTWRP).</p> <p>We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These ecologically-</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>Harbour. Their lackadaisical and arrogant behaviour over those issues does not bode well for their involvement in the first such scheme to be tried in the UK. I have absolutely no trust in this company - their lack of transparency and the fact that they are owned by venture capital companies demonstrates that they are only in this business to make money and not to provide an essential public service. Indeed, Mr Justice Johnson said in his ruling against Southern Water that their previous offences had been motivated by a desire to “focus the company’s attention on those metrics that increase its income, disregarding its wider compliance obligations”<sup>1</sup>.</p> <p>Even if it were not Southern Water proposing this scheme I would still be against it, as it is overly complicated, unrealistic and expensive, whilst not addressing many of the issues that the water companies have ignored over the years, e.g. maintenance and replacement of the current water distribution system. There are other, more environmentally-friendly ways of improving our water supply, starting with the harvesting of rainwater and urgently addressing leakage in the mains supplies, something that has been neglected across the board since privatisation.</p> <p>If this scheme is given the green light, it is imperative that the safeguards Southern Water and Portsmouth Water suggest will be in place need to be guaranteed, 100% of the time. Given (especially) Southern Water’s track record, this is not something I feel can be achieved. As well as getting ill from exposure to polluted water in the harbour, local people may now be exposed to similar risks when drinking water from their taps. Mr Justice Johnson again – “[Southern Water] showed a shocking and wholesale disregard for the environment”<sup>1</sup> and even Southern Water themselves agreed that their acts had been “negligent”<sup>1</sup>.</p> <p>I urge you not to allow this scheme to go ahead. Safe drinking water should be a right and not a game of Russian roulette. We need safe and sustainable water for all consumers.</p> | <p>sensitive chalk streams support a wide variety of species, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire. Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reasons already outlined, those conventional sources are no longer available.</p> <p>We are undertaking a range of environmental assessments, as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk/index.html">https://www.hampshirewtwrp.co.uk/index.html</a>. The report details the preliminary findings of our environmental assessments based on the information available to date. The environmental assessments will continue to be updated and will be documented in an Environmental Statement that will be submitted as part of the Development Consent Order application.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government’s legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.is</p> <p>Our plan already includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government’s 25-year Environment Improvement Plan.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Regarding water quality standards and drinking water safety, the HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>and Wales. Further information on water recycling safety and standards is available on the DWI website <a href="https://www.dwi.gov.uk/water-recycling/">https://www.dwi.gov.uk/water-recycling/</a></p> <p>Regarding leakage, the reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP509   | <p>I would like to object to the Southern Water plan and ask that Defra please reject it and get them to rework it given the number of objections and concerns I am sure you are receiving.</p> <p>My specific points are that I really do not agree with the plan to pump treated water into the new Havant Thicket reservoir. That was not in the original plans that were agreed for the project to go ahead and fills me with horror. We have more than enough chalk aquifer options to fill it with pure water in the winter months.</p> <p>I am not happy with the expansion plans for [REDACTED] especially the part where it will be on top of what was a significant landfill site. You only need to see the road to see how unstable the whole area still is around Broadmarsh.</p> <p>I have lived in the Langstone and Emsworth area for over 50 years and have had to put up with the smell from [REDACTED] that hangs over the western part of Havant and Langstone particularly. Surely with modern engineering and technology this can be addressed.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We acknowledge concerns raised about the need for HWTWRP and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Regarding the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>We note your comments regarding odour in the area near Portsmouth Harbour WTW. As this consultation is for our Water Resources Management Plan which covers our plan for provision of drinking water we are unable to comment. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> |
| WRMP510   | <p>This is utterly unacceptable. You cannot now keep our drinking water safe, it is cloudy, it smells, it has weird tastes on odd days. I boil all my water before using and only drink bottled water.. but the bigger tell tale is that my dogs will not drink the water that comes directly out of the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

They avoid it and go outside and drink the pond water or any other container with rain water in it..</p> <p>Dogs know what's not safe so tell me please why they won't drink tap water if it is so called safe to drink..</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Water across the country has its own distinct taste influenced by the geology of the local area. The water quality compliance, as currently set out in our 2023-24 annual report, at our reservoirs is at 99.9%. We are always striving to improve this and our water supply is closely regulated by the Drinking Water Inspectorate (<a href="http://www.dwi.gov.uk">www.dwi.gov.uk</a>).</p> <p>If you have particular concerns regarding the quality of your tap water, please visit <a href="https://www.southernwater.co.uk/help-and-support/my-water-looks-smells-or-tastes-unusual/">https://www.southernwater.co.uk/help-and-support/my-water-looks-smells-or-tastes-unusual/</a> where the causes of various issues are explained, and you can report a problem if necessary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP511   | <p>To Whom It May Concern</p> <p>Subject: Concerns Regarding Proposed Effluent Recycling Plant and Water Management Plans</p> <p>I am writing to express my significant concerns regarding Southern Water's plans for the effluent recycling plant and related water management strategies. While I appreciate the challenges of ensuring a sustainable water supply, the current proposals raise several serious environmental, economic, and community concerns.</p> <p>Key Concerns</p> <p>1. Lack of Sustainable Rainwater Utilization</p> <p>The UK collects only 1% of its rainfall. It is imperative that Southern Water develops solutions to store the abundant winter rainfall for use during dry summers. This free and natural resource is underutilised.</p> <p>2. Environmental Risks at Broadmarsh (Site 72)</p> <p>Developing the effluent recycling plant and deep tunnel shafts on a contaminated landfill site poses unacceptable environmental risks to Langstone Harbour. There are safer, more suitable locations that avoid jeopardising this sensitive environment with increased illnesses across water users both human and animal being reported due to the atrocious quality of the local water ways.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We acknowledge concerns raised about the need for the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution and set out our response below.</p> <ol style="list-style-type: none"> <li>1. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</li> <li>2. Building on former landfill sites is not unusual. When done with proper management and compliance with regulations and ensuring environmental safeguards are in place building on former landfill sites is both feasible and safe and is increasingly an important tool in sustainable development. Southern Water has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill, including in respect of piling down to chalk. Works interacting with the landfill are expected to require an environmental permit, which provides an additional layer of protection and control in relation to those works. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main report to the statement of response.</li> </ol> |

|-----------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>3. The water recycling plant will be designed to be sympathetic to Broadmarsh Coastal Park and views from Langstone Harbour without compromising functional or safety requirements. As above, any impacts on landscape from the proposals will be addressed through the ongoing Environmental Impact Assessment. To keep up to date with the plans you can visit <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a>.</p> <p>4. Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reasons already outlined, those conventional sources are no longer available. The location of the WRP (water recycling plant) is because it needs to be close to where there are sufficient levels of treated effluent.</p> <p>5. We are teaming up with neighbouring water companies to build two reservoirs that will supply our customers with water – one at Havant Thicket and one in Oxfordshire. Our plan also includes provision for building another in Sussex. We have looked at building more reservoirs locally, however finding suitable sites close to a reliable source and where the water is needed, with the right ground conditions, is challenging. We have also investigated aquifer storage and recovery options in Hampshire which can be used for storing water underground in porous rock so it can be available when needed. We are investigating one such scheme in the Lower River Test for delivery from 2040 that could provide about 5.5 million litres a day. However, this would only address a very small amount of the shortfall that we face. The issue elsewhere in Hampshire is that the aquifers are not confined – i.e. the water would simply flow away.</p> <p>6. Our consultation involved 8 roadshows throughout our supply area. Here consultees could visit and speak to the team directly. We also undertook 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation. All of these activities were publicised on our website and on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information. We fulfilled the expectations from planning guidance regarding our visibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>7. We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a>. Regarding water quality standards, the HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when</p> |

|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>3. Visual and Environmental Impact<br/>The proposed plant at Broadmarsh will have a significant visual impact on the Langstone Harbour area. Additionally, the discharge of reject water into the Solent will be highly concentrated—four times more than current sewage effluent—causing potentially significant environmental harm.</p> <p>4. Inefficient Location and Cost Concerns<br/>Building the plant over 40km away from where the recycled water is needed is not sustainable. The annual operational costs of transporting water are projected to exceed £3 million, which will burden customers while also exacerbating energy consumption and emissions with a huge impact from relocation and loss of earnings on those poor people and businesses who will be in the line of sight of the massive ground works necessary to fit and maintain pipes and channels to transport the water and sewage.</p> <p>5. Missed Opportunities for Greener, Cost-Effective Solutions<br/>Greener alternatives, such as winter storage reservoirs, have not been adequately explored. These options could provide long-term benefits, including biodiversity and recreation, while being more cost-effective.</p> <p>6. Insufficient Public Consultation<br/>The public consultation process was inadequate. Southern Water should have conducted a full statutory consultation, ensuring widespread awareness through clear communication, including posters in impacted areas. All affected customers should have been consulted.</p> <p>7. Trust and Operational Concerns<br/>Southern Water's track record of treatment plant and pumping station failures undermines trust. The absence of independent monitoring of the discharge into the reservoir is also deeply concerning.</p> | <p>transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. Further information on water recycling safety and standards is available on the DWI website <a href="https://www.dwi.gov.uk/water-recycling/">https://www.dwi.gov.uk/water-recycling/</a></p> <p>8. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations).</p> <p>9. All HWTWRP documentation is available on the dedicated website; <a href="https://www.hampshirewtwrp.co.uk">https://www.hampshirewtwrp.co.uk</a> where you will find contact details should you wish to get in touch with the project team regarding any clarifications needed on the information available.</p> <p>10. Once HWTWRP is operational, water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. We don't expect customers to buy bottled water when the water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>11. Regarding the addition of recycled water to Havant Thicket reservoir, a further consultation on water quality for HWTWRP was held in March 2025. This includes details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. The Environmental Water Quality Report, in summary, shows that changes in water quality in Langstone Harbour would be small and are not expected to have any impact on biodiversity. The report also confirms that reject water from the water recycling process, which will be released into the Solent, is unlikely to affect water quality or the biodiversity of the Solent. The full report is available to download here <a href="https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf">https://www.hampshirewtwrp.co.uk/EnvironmentalWaterQualityReport.pdf</a></p> |

|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>8. Leakage and Waste<br/>Southern Water loses 19% of its treated water daily due to leaks—equivalent to 100 million liters. The current leakage reduction targets are insufficient. A more ambitious program to replace mains and improve distribution could achieve a 50% reduction by 2040 and 70% by 2050.</p> <p>9. Misleading Communication<br/>The illustrations in Southern Water's Consultation Brochure fail to clarify that recycled water will be supplied to Portsmouth Water customers during droughts and emergencies, with more routine supply expected after 2040. This lack of transparency is troubling.</p> <p>10. Risk of Public Backlash<br/>The proposal risks eroding public trust in tap water, potentially driving increased consumption of bottled water and worsening plastic waste issues.</p> <p>11. Biodiversity Loss and Long-Term Sustainability<br/>Creating a chalk spring-fed reservoir would provide a unique opportunity for biodiversity. Recycled effluent input, however, risks altering water quality, temperature, and geochemistry, with unknown consequences for biodiversity.</p> <p>Conclusion<br/>The current proposal for the effluent recycling plant raises significant environmental, economic, and public trust issues. Southern Water must prioritise greener, more sustainable, and community-supported alternatives.<br/>I urge Southern Water to reconsider these plans and engage in meaningful consultation with all stakeholders to ensure the best long-term outcomes for both people and the environment.<br/>Thank you for your attention to these concerns. I look forward to your response.</p> |                                                                                                                                                                                                                                                                                                                                                                        |
| WRMP512   | <p>I wish to register my objection to Southern Waters current plans to create more environmental problems and public health issues through increased use of recycled sewage. Specifically, there must be a move towards more use of pure water rather than recycled water. Also, a commitment to reduce wastage of water, whether pure or recycled.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink.</p> <p>We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p> <p>No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir.</p> <p>Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). The HWTWRP scheme is designed to provide water resources during severe and extreme droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>On leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP513   | <p>To Whom it May Concern,</p> <p>I want to voice my opinion about the SW DEFRA Management Plan. There are far too many reasons for my objections to be all listed in this email. But, let it go on record that I am unhappy with the proposals. It sounds unreasonable to spend money to transport water from Norway than to figure out how to make use of all the rainwater in the UK It is also extremely disappointing that the original proposal for the Havant reservoir was tempting the community to agree by offering it for the use of water sports, etc. Once that was agreed it was then dismissed and now it is becoming something else entirely. It's been disruptive to the community and will cost us money.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback. Your objection has been noted.</p> <p>Our website will contain the development of our WRMP24 and, going forward, our WRMP29.</p> <p>Sea tankering is no longer included in our plan.</p> <p>In order to capture more rainfall, we are planning to build two reservoirs. The Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>The water recycling proposals at Havant Thicket are not expected to impact the proposed recreational use of the reservoir.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| WRMP514   | <p>Hi</p> <p>I live in Portsmouth and I just heard about the plans to mix 'recycled' water from [REDACTED] sewage works with the fresh spring water currently sourced at Havant, and serve it up as tap water. So they can ship extra water to Winchester.</p> <p>Basically you are trying to get away with charging us to drink our own piss?</p> <p>I am categorically against this. It's a disgusting idea. Sooner or later someone is going to get typhoid or cholera if you guys keep mismanaging our water supplies like this.</p> <p>Even if it was technically feasible to do this and get this right, how can we trust the people that gave us this situation ...</p> <p><a href="https://www.bbc.co.uk/news/av/uk-59050129">https://www.bbc.co.uk/news/av/uk-59050129</a></p> <p>... to build it and run it correctly.</p> <p>Would anybody profiting from this actually come down here and drink this water?</p> <p>This untried technology may be necessary in oil-rich, water-poor desert environments, but it is wasteful in terms of energy use and has no place here. And the site you propose to build it on is an unstable old landfill site with all the environmental hazards that that entails. I really had to check the date to make sure this was not an April Fools Day wind-up</p> <p>You leave my water supply alone! Winchester can find it's own water</p> <p>- A resident of Portsmouth</p> <p>There will be a HUGE campaign against this. You will not get away with it.</p> <p>Sort [REDACTED] out so it no longer pollutes the harbour I sail in, and stop letting greedy foreign fat cats loot and pollute our precious country for their greedy profit</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |

|           |          | <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Building on former landfill sites is not unusual. When done with proper management and compliance with regulations and ensuring environmental safeguards are in place building on former landfill sites is both feasible and safe and is increasingly an important tool in sustainable development,</p> <p>Southern Water has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill, including in respect of piling down to chalk. Works interacting with the landfill are expected to require an environmental permit, which provides an additional layer of protection and control in relation to those works.</p> <p>We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main report to the statement of response.</p> <p>Regarding effects of recycled water on local ecology, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators’ Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Regarding the quantification of cost was considered when we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP515   | <p>As a resident of Rowlands Castle - Please see below objections:</p> <p>Further to Southern Water's (SW) last draft Water Resources Management Plan in 2023, which included [REDACTED] effluent recycling via Havant Thicket Reservoir, being rejected, it would appear that they have now just recycled the same old leaky Plan, with more effluent recycling, but this time they are also proposing to tanker water all the way from Norway to Southampton in a drought to plug the gap in their plan to 2035! Even SW previously rejected tankering from Norway as a stupid idea (very expensive and environmentally unsound, with the risk of importing non-native species), but rather than look at more sustainable options that might undermine their case for recycling effluent they have effectively recycled their old Plan giving lots of reasons why the better options cannot be developed quickly enough and the effluent recycling scheme still remains their best option.</p> <p>FACTS:</p> <p>* In the UK we only collect 1% of rainfall. We need a better plan that works with climate change to collect more water in the predicted wetter winters and to store it for use in drier summers, using underground confined aquifers and by building new reservoirs. Instead, SW proposes energy and chemical hungry effluent recycling from which it and its owners will be able to profit very considerably over many years from both construction and operation. The</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our Water Resources Management Plan (WRMP) looks at our future water needs from 2025 to 2075. We carry out an options appraisal exercise when we update our plan every 5 years. This exercise looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. Sea tankering from Norway is no longer included in our plan.</p> <p>The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These ecologically-sensitive chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           | <p>recycling plant will be located on an old landfill site on the coast at Broadmarsh (Havant), with piling and tunnelling putting Langstone Harbour at risk from leachate and the recycled water will be pumped up to Havant Thicket Reservoir and then 40kms to [REDACTED]. The current building costs are £1.2billion and spiralling. We need a radical rethink on where and how the company takes water from the environment, for example moving its abstraction points closer to the sea to leave freshwater in our precious chalk streams for longer.</p> <p>* It is shocking that SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet SW's slow programme for improvements means even by 2050 SW will still be leaking about 10% of all the water it treats, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious leakage and mains replacement programme SW will never get leakage under control.</p> <p>* An industry leakage expert tells us if SW put the funding and priority in, SW should be striving to achieve a 70 % reduction in leakage by 2050 (not the 53% target in its plan).</p> <p>* In West Sussex, SW has not taken action to connect up its network and as a result SW is dismissing options because it can't get the water to where it is needed. Why is SW not connecting up the network? It is because they want to get the recycling schemes underway first. If the Plan goes through, the use of very expensive effluent recycling schemes will effectively have been approved and SW will be able to carry on and build these schemes at great cost to its customers and the environment.</p> <p>All unacceptable.</p> | <p>litres of water per day to residents in Hampshire. Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reasons already outlined, those conventional sources are no longer available.</p> <p>Our plan includes building two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. It also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>A Chalk Managed Aquifer Recharge (MAR) feasibility trial is also being considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable as a result of the reduction in abstraction licences on the whole river and groundwater system and potential impact on migratory fish.</p> <p>Regarding the location of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Regarding leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

These will be reconsidered for WRMP29.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| WRMP529   | <p>Dear Sir,</p> <p>It is understood that Southern Water proposes to pump sewage effluent into the new reservoir at Havant Thicket, which was originally approved by Havant District Council to store pure spring water for distribution to the residents living in the South East area served by the Portsmouth Water Company.</p> <p>I am OPPOSED to the latest proposal to pump sewage effluent to mix with the pure spring water at the HT Reservoir</p> <p>This process is energy intensive and unsustainable. Due to climate change, we have the opportunity to set an example and also adhere to our sustainable commitments through the use of an energy efficient and sustainable solution for the effluence.</p> <p>There is no public trust in Southern Water which has chosen profit over people for too long. They have dumped sewage in our rivers and sea and has lost public trust. There has been a public outcry and all you have to do is note the first upset in the local election for MPs—which had mostly to do with the sewage issues and Southern Water. This trust will no doubt carry on to lack of trust in drinking recycled sewage water and could lead to countless households purchasing bottled water.</p> <p>We must:</p> <ul style="list-style-type: none"> <li>• We request that you demand that Southern Water do more to repair leaks and replace mains. If they put the funding &amp; priority in they should be striving to achieve a 70 % reduction in leakage by 2050.</li> <li>• Educate the people from child to elder about the importance of conserving water.</li> <li>• Provide incentive to harvest rain water for gardens</li> <li>• Create more reservoirs</li> <li>• An in depth independent review of the ability for SW's recycling engineering to satisfactorily cleanse the recycled effluent removing all known chemical pollutants and pharmaceutical contaminants by independent specialists in this field.</li> </ul> <p>Furthermore, we request that the authorities conduct:</p> <ul style="list-style-type: none"> <li>• An in depth independent review of the entire proposed infrastructure by independent qualified professionals in this field be published.</li> <li>• An in depth independent review of the costings of all the proposed infrastructure, pipes, pumping stations, etc. by independent financial advisers.</li> <li>• Total cost analysis of the on going maintenance required for a project that will be required to run daily all year round and not just in drought conditions and to forecast the life time of such a project.</li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) will facilitate the use of purified recycled water to augment the Havant Thicket reservoir. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and offer greater resilience in the event of a prolonged drought. The selection of HWTWRP followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These ecologically-sensitive chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire. Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reasons already outlined, those conventional sources are no longer available.</p> <p>We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a>. For information on how we are addressing storm overflows, see; <a href="https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/">https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/</a></p> <p>Regarding leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding water user education, we have a home visits programme and a schools programme which are specifically targeted at raising awareness about water use and providing helpful tips on reducing water consumption in homes. In AMP8 we will be building a Water Calculator to help educate customers on their own water use and provide useful practical advice on how to save water.</p> |

|           | <ul style="list-style-type: none"> <li>An independent review of the state of the infill-site at Broadmarsh which will be cut open to enable all the 45kms of piping required to transfer the water to the [REDACTED] pumping station and beyond.</li> <li>Forecasting of the chemical and health impacts the opening of this infill site will have on the harbour and communities.</li> <li>Full review of the life cycle emissions</li> </ul> <p>Please note, I am 100% in favour of the original plans for the Reservoir primarily because we need to store water in the rainy months so that we can have water during drought or times with less rain. Our catchment is particularly vulnerable due to the karst in the chalk and the water flows quickly through small fissures in the chalk to the source. It makes sense to conserve it in a reservoir/s.</p> <p>The site is designated by the Environment Agency as a "Principal Aquifer", one of only 11 such sites in the UK. It is also within an Aquifer "Source Protection Zone" classified as "Outer Zone 2". Our water supplies are extracted by Portsmouth Water (PW) through the Havant and Bedhampton Springs, 6 km to the SW of the site.</p> <p>Clean groundwater is precious, finite and essential for health, the environment and our infrastructure. Our groundwater catchment is vulnerable and it is our duty to support, conserve and protect this fragile groundwater ecosystem and to promote catchment management approaches that will ensure its purity and longevity.</p> <p>Many thanks for your consideration of these points.</p> | <p>On incentives, we already have incentives in place for collecting rainfall in gardens: We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. Based on typical rainfall in the UK, by fitting a water butt to your gutter and downpipe, you could save up to 24,000 litres of water a year – which is one reason that our business customers are able to claim a free water butt from us: <a href="https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/">https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/</a>.</p> <p>With regard to rainfall storage, our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). However, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>With regard to an independent review, our regulators the Environment Agency, Natural England and Ofwat are independent from Southern Water and they undertake an analysis of our plan. Their analysis looks at all aspects of the plan, including the options and risks. Our Statement of Response shows the feedback we received from these regulators and how we have responded to it. The options and risks associated with major schemes such as HWTWRP are assessed independently by RAPID through the Gated Process, and the WRMP as a whole requires Defra approval before this plan can be finalised.</p> |
| WRMP535   | <p>Dear sir / madam</p> <p>Our community is appalled that Southern Water are considering the proposed plan at [REDACTED]</p> <p>Firstly, medications, drugs, all sorts of chemicals pass through human bodies into urine - to propose we then drink water that is contaminated with these chemicals is not only harmful but criminal.</p> <p>Other concerns are listed below:</p> <p>A – We get plenty of rain in winter, Southern Water should be developing solutions which store that free natural water for use in dry summers. Only 1% of rainfall is collected in the UK.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is needed to provide the additional volume needed to maintain supply-demand balance and offer greater resilience in the event of a prolonged drought. The advanced treatment processes that will be used in recycling have been used around the world to remove nutrients, pharmaceuticals, and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>A - On developing reservoir storage, reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           | <p>B – Significant risk to Langstone Harbour of developing the effluent recycling plant and deep tunnel shafts needed on the contaminated landfill site at Broadmarsh (Site 72). There are alternative safer and more suitable sites for the plant which avoid unacceptable environmental risk to the harbour.</p> <p>C – The significant visual impact of the proposed Water Recycling Plant at Broadmarsh particularly from around Langstone Harbour.</p> <p>D – There is huge concern about the environmental impact of the effluent recycling scheme, including significant impacts associated with the concentrated reject water discharge to the Solent. The reject water from the effluent recycling plant discharged into the Solent will be 4 times more concentrated than the existing sewage effluent discharged. A Southern Water report confirmed it will likely have a significant effect.</p> <p>E – Greener and cheaper alternatives are not being properly investigated &amp; brought forward.</p> <p>F – Not a sustainable solution, especially building it more than 40km from where the recycled water is needed. The treatment &amp; energy costs to transport the water 365 days a year will be huge. Based on Southern Water's energy use figures customers will be paying more than £3 million a year for the Havant effluent recycling plant to operate 365 days a year, and pump the water to [REDACTED] even though this option was selected as a drought resource.</p> <p>G – Energy security is already a significant concern, developing energy intensive solutions makes things worse for energy security and the planet.</p> <p>H – Very expensive solution which is not supported by customers, minimum £1.2 billion, with costs spiralling, making it very hard to believe that it will provide 'best value' for customers. For example, you could build 3 new winter storage reservoirs for the same cost, and they would still be providing a recreational and biodiversity benefit in 200 years, the effluent recycling plants will be redundant in 60 years.</p> <p>I – Totally inadequate public consultation before effluent recycling options were selected. Once the [REDACTED] desalination option was rejected Southern Water should have reviewed all of the alternatives and undertaken a full statutory consultation. Posters should have been put up in all of the areas to be impacted by effluent recycling plants to ensure local communities were made aware of the proposals &amp; consultation. All Southern Water &amp; Portsmouth Water consumers that will be impacted by this significant change to their water supply should have been consulted.</p> <p>J – It risks turning people away from tap water due to the lack of trust in the water companies, creating a new used plastic water mountain.</p> | <p>Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>B - Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>C - Portsmouth Harbour WTW is already in existence. The water recycling plant will be sympathetic to Broadmarsh Coastal Park and views from Langstone Harbour without compromising functional or safety requirements.</p> <p>D – HWTWRP held a consultation on water quality in March 2025. This included details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations. Details of this consultation, including the Environmental Water Quality Report, can be found on the project's dedicated website; <a href="https://www.hampshirewtrp.co.uk/consultation.html">https://www.hampshirewtrp.co.uk/consultation.html</a>. Regarding the environmental impact of the effluent recycling scheme, the reject water from the plant discharged into the Solent will be carefully monitored to ensure compliance with environmental standards. The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensures compliance with all discharges.</p> <p>E - Regarding selection of options, we carry out an options appraisal exercise when we update our plan every five years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact, etc., in addition to capital and operating costs.</p> <p>F - Recycled water options are generally only considered where the river or groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). The HWTWRP scheme is designed to provide water resources during droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.</p> |

|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>K – Loss of a unique biodiversity opportunity to create a chalk spring fed reservoir. The impacts on reservoir water quality and biodiversity are still unknown. The input of recycled effluent to the reservoir will result in changes to temperature, salinity and geochemistry.</p> <p>L – Significant additional risk of pollution from the recycling plant, especially if it is not maintained properly by Southern Water. No independent monitoring of the discharge into the reservoir is planned.</p> <p>Please stop this proposed plan going ahead.</p> | <p>G - Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These ecologically-sensitive chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire. Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reasons already outlined, those conventional sources are no longer available.</p> <p>H - HWTWRP is being funded in the same way as all our costs, funding for new infrastructure and improvements on the water supply side of the business is averaged across water supply customers' bills across our region. As with all costs and charges to customers, funding for the Project will be subject to approval by our economic regulator, Ofwat. We anticipate that Ofwat would spread the cost of construction and operation over the life of the Project once built, to reduce the impact on bills in any one year. The Project is continuing to be developed. We currently estimate that the cost of the Project to each of our water supply customers would be approximately £2.50 a month over a 20-year period..</p> <p>I - With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024. For more information, see here: <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>Our consultation involved 8 roadshows throughout our supply area. Here consultees could visit and speak to the team directly. We also undertook 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation. All of these activities were publicized on our website and on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and stakeholders were directly contacted with information. We fulfilled the expectations from planning guidance regarding our visibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>J – Water at customers' taps will continue to meet strict drinking water quality standards set and maintained by the Drinking Water Inspectorate. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. We</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>don't expect customers to buy bottled water when the water coming from their taps will continue to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>K - With regard to impacts on biodiversity, water quality in Havant Thicket reservoir is one of the subjects of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. Further details and updates can be found on the HWTWRP website;<br/> <a href="https://www.hampshirewtwrp.co.uk/index.html">https://www.hampshirewtwrp.co.uk/index.html</a></p> <p>L - No untreated wastewater will enter the reservoir. The HWTWRP scheme uses global best practices with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to the reservoir.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP537   | <p>I am truly appalled at the plan to put recycled sewage in to local drinking water via the Havant Thicket Reservoir. This novel idea - never before deployed in the UK - fills me with horror and alarm. Why?</p> <p>A. I have lived in Emsworth for 24 years and witnessed lie after lie from Southern Water regarding their discharge of sewage into Chichester Harbour - polluting the AONB and neighbouring beaches. I personally know several people who have developed illness from e-coli whilst swimming in the harbour. At the same time Southern have been one of the worst offenders in terms of rewarding the senior executives. They have one of the worst record of unfixed leaks in the UK to boot. THERE IS ABSOLUTELY NO TRUST LOCALLY IN SOUTHERN WATER'S ABILITY TO DELIVER AND MAINTAIN SUCH A SYSTEM AS THEY PROPOSE..</p> <p>B. Southern seem to have been able, it appears, to piggy-back on Portsmouth Waters excellent scheme at Havant Thicket - employing what can only be called a "planning loophole" to circumvent local planning authorities. This is outrageous behaviour. For local people to effectively have no say in the matter is simply a denial of our democratic rights.</p> <p>C. I have mentioned leaks above, but will do so again. As we are now firmly in a period of climate change, I am convinced that if leaks were fixed and more reservoir capacity (such as Havant Thicket) was constructed there would be no need for this expensive and energy consuming project.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>A. We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a>. For more information about work we are doing to reduce sewerage discharges see<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/">https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/</a></p> <p>Purified recycled water is water that has gone through a series of advanced treatment techniques before being pumped into a river, lake or reservoir – from where it can be taken and treated to strict drinking water standards before being sent into supply. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by the Hampshire Water Transfer and Water Recycling Project (HWTWRP). We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>B. As HWTWRP is classified by the Planning Inspectorate as project of national significance, we are required to seek consent from the Secretary of State in the form of a Development Consent Order (DCO). We expect to submit a DCO application to the Planning Inspectorate in 2025. The DCO process puts an emphasis on consultation and early engagement with stakeholders and communities. In this regard, we have carried out three separate consultations on this scheme, the first in 2022, the second in 2024 and the most recent in March 2025. In terms of local engagement for our consultations, in 2022 we ran a six-week non-statutory consultation (eight weeks in 2024), sending out almost 30,000 letters to those in the primary consultation zone around the Project. We</p> |

|-----------|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                 | <p>placed half-page colour adverts over three weeks in the Southern Daily Echo, Hampshire Chronicle and The News (Portsmouth), and ran a social media outreach programme that ran throughout the six weeks of the Consultation. We sent posters to parish councils, and other social hubs like churches, community centres and libraries. We also launched a dedicated website which hosted a virtual room. The virtual room afforded the public with the opportunity to view consultation materials without needing to attend an in-person event. We hosted six in person events in proximity to the pipeline corridors and three online sessions across three consecutive weeks at different times to accommodate for different groups. Reference copies of the consultation materials were also located at 9 different deposit points including libraries and community hubs. We made sure to accommodate those who did and did not have access to either the internet or appropriate viewing technology. Further information about these consultations, and the project documentation and updates, are available on the dedicated project website; <a href="https://www.hampshirewtwrp.co.uk/index.html">https://www.hampshirewtwrp.co.uk/index.html</a></p> <p>C. Regarding leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>Reductions in the amount of water we can take from the Test and Itchen rivers means we have a shortfall of some 192 million litres of water a day during a drought. These ecologically-sensitive chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water and HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire. Water recycling inevitably uses more energy than abstraction from conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, due to reasons already outlined, those conventional sources are no longer available.</p> |
| WRMP538   | I am writing to express my strong objections to the this Southern water WRMP and ask you to reject it outright. | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>This plan is an extremely detailed and lengthy document which to the average person in the street is very hard to follow and fully understand which I suspect may be intentional. However, it is clear, even to me, that the proposals by Southern Water (SW) are unrealistic, very expensive and will do nothing to improve the quality of water they will provide and have a huge adverse impact on the environment. The only good proposal is for the formation of the new reservoir in Havant Thicket which is already underway.</p> <p>My objections are as follows.</p> <p>1) The Havant effluent recycling scheme is a very expensive project both in terms of capital costs and ongoing running costs both in terms of money and energy required to run it. It is my understanding that it will need to run all the time even if the water it produced is not required. The concentrated effluent produced by the plant which will be discharged in the sea will have a large adverse effect on the marine environment which could be damaging to both marine life and to humans who use the sea for whatever reason.</p> <p>2) It would be much more ecologically and economically sound to look at alternative ways of managing water. The problem is not that we have enough annual rainfall to meet the demands for water but there is not enough storage capacity available for when it does rain and too much water is lost through leaks in the distribution system and inefficiencies in the use of water both at a household and industrial level. With a sustained educational programme along with incentives for households to store water for non potable uses such as garden watering, car washing and even flushing toilets a huge reduction in water consumption could be made.</p> | <p>We appreciate there may be difficulties with the detailed and lengthy nature of the plan; however, this is unavoidable due to the technical nature of the information required set out in the statutory process and supporting guidance. For those seeking a high-level understanding of our plan, we produced a non-technical summary document which you can view via this link <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges.</p> <p>1) The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. Both capital and operating costs are factors considered during the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>2) We have considered a number of storage options in the past and will reassess them for WRMP29 including considering locations for new storage reservoirs. However, Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage).</p> <p>We are planning to go beyond the government leakage reduction target of 50% and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have a home visits and schools programme which are specifically targeted at raising awareness about water use and providing helpful tips on reducing water consumption in homes. In AMP8 we will be building a Water Calculator to help educate customers on their own water use and provide useful practical advice on how to save water. Regarding household water storage, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included</p> |

|           | <p>3) The proposal to use tankers to bring water from Norway at times of drought is just unbelievable. As a country are we so lacking in expertise that we have to resort to such basic and inefficient means of being able to provide enough water in times of drought. What about the environmental costs of transporting this water, contamination of the water from previous cargoes that tankers have been carrying and also the introduction of alien species carried in the water. Or will it be so heavily treated that it will not be fit for consumption.</p> <p>4) One of the big advantages of being a customer of PORTSMOUTH WATER (PW) is that we enjoy water of a very high quality and standard which would be put in severe jeopardy if SW are allowed to pump their recycled water in the new reservoir at Havant. I am aware that most of the time PW will not draw water from this reservoir but it has been stated that this may be necessary at times of severe water shortage.</p> <p>5) SW have been very lax in the public consultation of this plan. Very few meetings have been organised, they are few and far between dates and not necessarily geared to the local population. A project of this size which is going to have a profound effect on one of the basic needs of the population needs to be brought to the attention of all who will be affected by it.</p> | <p>offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>3) Sea tankering is no longer included in our plan.</p> <p>4) We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding a sustainable water supply into the future means we need to look at all viable schemes and will have to make decisions with the support of our national Government and industry regulators which benefits all society. Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>5) In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged eight roadshows across our supply area during October-November: three in our Western area, two in our Central area and three in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. We also undertook five webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation. All of these activities were publicised on our website and on social media and a press release regarding the consultation was issued and picked up by major newspapers: The Guardian and The Financial Times.</p> <p>The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information. We have received 1,176 responses as part of rdWRMP24 consultation and have met the visibility standards within the guidance. We do welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations.</p> <p>The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by Defra and our regulators which require not only a secure water supply but to provide wider social and environmental benefits.</p> <p>Regarding water quality standards, the HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. Further information on water recycling safety and standards is available on the DWI website <a href="https://www.dwi.gov.uk/water-recycling/">https://www.dwi.gov.uk/water-recycling/</a></p> |

|           | <p>So, in conclusion this plan by Southern Water is ill conceived, smacks of being a huge capital project with little benefit to anyone apart from SW and will be extremely expensive not only in capital and running costs but also have a massive adverse effect both ecologically and on the environment. Although it may ultimately produce more water it will be of much inferior quality to that which SW presently produces and certainly will not come anywhere near the standard of Portsmouth Water.</p> <p>Once again, I would urge Defra to reject this plan and instruct Southern water to go away and come up with a much more sustainable and workable one</p>                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WRMP539   | <p>Southern Water has a history of distorting, deceiving and lying about the production, waste, storage and use of water and put profit before people.</p> <p>This is evidenced by their approach to new housing, which they welcome as it is viewed as a cash cow as they do not put the infrastructure in place to cope with the increased usage.</p> <p>They have access to rainwater, a free, clean, hygienic resource but rather than look at this environmentally friendly method of production they have concocted this convoluted scheme to recycle effluent, which is environmentally unfriendly, particularly as it is an expensive fossil-fuel consuming process.</p> <p>Given their track record of dumping surplus effluent and grey water, and in covering their tracks,</p> <p>I have little confidence in their ability to deliver clean water. Given their track record, what they will deliver will be a more expensive and impure product.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Our regulators the Environment Agency, Natural England and Ofwat are independent from Southern Water and they undertake an analysis of our Water Resources Management Plan (WRMP). Their analysis looks at all aspects of the plan, including the options and risks. Our Statement of Response shows the feedback we received from these regulators and how we have responded to it.</p> <p>In Hampshire, we already need to find at least 166 million litres of water a day that's not from a river or from an aquifer. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Recycled water options are generally only considered where the river or groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). The HWTWRP scheme is designed to provide water resources during droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.</p> <p>Regarding rainfall capture and storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to,</p> |

| WRMP541   | <p>The impact of Southern Waters proposals will not be of any benefit to water users. There should be much more investigation into greener alternatives i.e harvesting of rainwater. I for one will not have any desire to drink so called recycled sewage into water. This will drive more people back towards bottled water which then invokes the undesirable use of plastic bottles. The fact that Southern Water has revised their draft shows they are not producing acceptable proposals. Please do not grant approval to this badly organised profiteering company.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>There are regulatory and statutory requirements for public water supply to be more resilient to droughts and to meet additional demands associated with growth and development. The Havant Water Recycling Treatment Plant (HWTWRP) scheme is designed to supplement water resources during droughts, when natural groundwater and river water has been depleted due to limited rainfall. The HWTWRP will help protect these rivers by re-using water that has already been used for public supply, rather than taking more water from the environment during times of low flows.</p> <p>Water recycling technology is tried-and-tested in other parts of the world, including Australia, Singapore and the USA, where companies have been recycling wastewater to create a drinking water source for more than 40 years. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by HWTWRP. We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> |
| WRMP545   | <p>Dear Sir,</p> <p>I fully supported Portsmouths Water initial application for development of Staunton country park and the loss of the ancient woodland for a reservoir storing Raw water and for recreational use. It is logical given the large population on the south coast.</p> <p>The application from Southern water though, to use this reservoir for effluent recycling for the purpose of managing 'shortfalls in drought emergencies' and supply to the Southampton area I strongly oppose for the following reasons:</p> <p>This is not the most cost effective method because:</p> <ol style="list-style-type: none"> <li>1. It creates create huge infrastructure - with massive initial, carbon and environmental damage in placing the pipe work and pumping stations.</li> <li>2. Ongoing maintenance and running costs - pumping continuously for occasional drought emergencies is NOT cost effective or green - wherever the electricity is generated.</li> <li>3. Higher than necessary increase in bills for users of the services due to the poor choice of managing drought emergencies.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note your objection to the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and set out our response to your concerns below;</p> <ol style="list-style-type: none"> <li>1. Regarding the carbon and environmental impact of large infrastructure schemes; we are undertaking a range of environmental assessments, as part of the Environmental Impact Assessment (EIA) process, to understand the potential effects of HWTWRP on the environment. A Preliminary Environmental Information Report, which is a key part of the EIA process, is available at <a href="https://www.hampshirewtwrp.co.uk/index.html">https://www.hampshirewtwrp.co.uk/index.html</a>. The report details the preliminary findings of our environmental assessments based on the information available to date. The environmental assessments will continue to be updated and will be documented in an Environmental Statement that will be submitted as part of the Development Consent Order application. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce</li> </ol>                                                                                                                                                                                                                                 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

---------------------------|
|           | <p>4. It has no impact on effluent going in to Langston harbour/ the solent as the waste from the pumped effluent is still discharged into the area of special scientific interest but in a more concentrated form</p> <p>5. It has no impact on the ability to deal with storm overflows.</p> <p>6. It risks increasing the usage of bottled water locally due to peoples concerns over recycled effluent.</p> <p>The only positive that this would bring is due to the infrastructure and running costs. Southern water would have a higher company value - and therefore potential higher returns for company management and investors. This should not be the priority here.</p> <p>Priorities that should be addressed as an alternative:</p> <ul style="list-style-type: none"> <li>• Improve SW leakage of supply pipes currently running at around 20% - this is a massive loss and would have a significant impact on abstraction</li> <li>• Develop new winter storage reservoirs nearer the area of need - low environmental impact and carbon neutral</li> <li>• Utilise underground aquifers to store winter water - and use the natural 'water cycle' as opposed to RO process.</li> <li>• Look to use of grey water for use in new housing for toilets etc.</li> <li>• Roll out smart meters/ make fitting mandatory to prevent wastage of water.</li> </ul> <p>All of the above would satisfy the customers needs and assuage their concerns. It would of course not make Southern water a more valuable company as their assets wouldn't increase!</p> <p>DEFRA must act on the customers needs, but also think in this environmental emergency times of what has minimal impact and has a minimal carbon impact.</p> | <p>our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>2. There are operational and maintenance costs involved with any new and existing infrastructure, which are necessary to continue to meet water supply demands now and in the future. New limits on the amount of water we can take from the Test and Itchen for public supply have been introduced to protect these rivers and their ecosystems. Where previously we would have taken water from the environment, we now need to use alternative means such as water recycling. The selection of HWTWRP followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>3. HWTWRP is being funded by Southern Water. Like all our costs, funding for new infrastructure and improvements on the water supply side of the business is averaged across water supply customers' bills across our region. As with all our costs and charges to customers, funding for HWTWRP will be subject to approval by our economic regulator, Ofwat. We anticipate that Ofwat would spread the cost of construction and operation over the life of the Project once built, to reduce the impact on bills in any one year.</p> <p>4. Regarding impacts on water bodies, a further consultation on water quality has been held in 2025. This includes details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. The Environmental Water Quality Report, in summary, shows that changes in water quality in Langstone Harbour would be small and are not expected to have any impact on biodiversity. The report also confirms that reject water from the water recycling process, which will be released into the Solent, is unlikely to affect water quality or the biodiversity of the Solent. The full report is available to download here <a href="https://www.hampshirewtrp.co.uk/EnvironmentalWaterQualityReport.pdf">https://www.hampshirewtrp.co.uk/EnvironmentalWaterQualityReport.pdf</a></p> <p>5. Storm overflows are associated with the functioning of sewerage network, which is not within the remit of the Water Resources Management Plan (WRMP) – for information on how Southern Water is tackling storm overflows see our Drainage and Wastewater Management Plan (DWMP) <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a> and <a href="https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/">https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/</a></p> <p>6. Water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>and environmental organisations to develop the plans and ensure this. We don't expect customers to buy bottled water when the water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>In terms of alternatives proposed to HWTWRP;</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This will also require the entire housing stock across our supply are to undergo modifications in internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level.</p> <p>All our meters going forward will be smart meters. We plan to replace all our existing meters with smart meters by 2030.</p> |
| WRMP546   | <p>I am writing to express my serious concerns about Southern Water's (SW) Revised Water Resources Management Plan (WRMP). As a local resident, I believe the proposals outlined in the plan pose unacceptable environmental risks and place an undue financial burden on our community.</p> <p>A key element of the plan involves the construction of an effluent recycling plant at Broadmarsh, Havant, located on a former landfill site. This raises significant environmental concerns, particularly the risk of leachate contaminating Langstone Harbour during construction. Furthermore, the scheme involves pumping recycled water to Havant Thicket Reservoir and</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>transporting it over 40 kilometers to [REDACTED]. The projected cost of this initiative has already reached £1.2 billion and continues to escalate.</p> <p>Southern Water's failure to address its persistent leakage issues further undermines confidence in the plan. Currently, the company loses 100 million liters of treated water daily—19% of its total supply. By 2050, their target is to reduce leakage by only 53%, falling well short of the 70% reduction that industry experts believe is achievable.</p> <p>The inclusion of impractical and unsustainable alternatives, such as importing water from Norway, is another point of concern. This proposal, previously dismissed by Southern Water itself as costly and environmentally hazardous, suggests a lack of credible solutions. Meanwhile, viable and sustainable options, such as expanding reservoirs, utilizing aquifer storage, and improving network efficiency, have been largely dismissed without sufficient consideration.</p> <p>Additionally, the prospect of a merger between Portsmouth Water and Southern Water raises fears of significant price increases for local residents, who would be expected to finance these costly and flawed projects.</p> <p>I urge you to closely examine Southern Water's WRMP and advocate for a more sustainable and responsible approach to water resource management. The plan must prioritize environmental protection, address inefficiencies in the current system, and deliver solutions that serve the long-term interests of the community.</p> <p>Thank you for your time and consideration. I look forward to hearing how you intend to represent these concerns to the relevant authorities.</p> | <p>landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Southern Water and Portsmouth Water are entirely separate and independent companies but have commercial arrangements to transfer water across their respective boundaries. Portsmouth Water is a 'Water Only Company' meaning that within its area, it provides only potable water services. Southern Water provides wastewater services in the area Portsmouth Water supplies for water. Southern Water is not discussing changes to the current licence to operate arrangements and company mergers are not considered to be part of this consultation process. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is being funded by Southern Water. Like all our costs, funding for new infrastructure and improvements on the water supply side of the business is averaged across our own water supply customers' bills across our region. As with all our costs and charges to customers, funding for HWTWRP will be subject to approval by our economic regulator, Ofwat. We anticipate that Ofwat would spread the cost of construction and operation over the life of the Project once built, to reduce the impact on bills in any one year.</p> <p>The need for HWTWRP is driven by reductions in the amount of water we can take from the Test and Itchen rivers, which means we have a shortfall of some 192 million litres of water a day during a drought. These ecologically-sensitive chalk streams support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water to help keep taps and rivers flowing. HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p> <p>We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WRMP547   | <p>I am writing to register my strong objection to the Hampshire effluent recycling scheme. Where was the consultation about this major issue? The deadline has crept up on us with very little information or communication from Southern Water at all.</p> <p>The use of recycled effluent to boost the water supply has one real aim only; to maximise profits for Southern Water. This of course continues the long track record of Southern Water in putting the interests of its shareholders before those of we, the consumers. Even after the fines of recent years and the dramatic increase in publicity over water quality issues nationally, discharges into Chichester Harbour from [REDACTED] and other treatment works in the region continue at alarming levels. Given all this, it is hard to have any confidence in Southern Water's ability to develop and manage a complex effluent treatment plant without more real risks to the environment.</p> <p>Meanwhile, Southern Water is avoiding tackling the logical, sustainable solution. Why is it investing so little in dealing with the huge levels of water leakage from the current system? This again is something that has been going on for years. Reducing leakage dramatically and improving rainfall storage are a vastly more sustainable route. As with all the water companies, Southern Water says that bills would need to rise significantly to fund such an investment, but where's the recourse for customers for the huge underinvestment that has been going on for years?</p> <p>Successive Governments and MPs - including the area's MPs past and (in some cases) present have seemingly done nothing to alleviate conditions. I urge that the recycling scheme be rejected and a better, sustainable solution be put in its place.</p> | <p>driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p> <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our rdWRMP24 consultation involved 8 roadshows throughout our supply area, as well as 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation. We sent out a press release regarding the consultation, which was picked up by major newspapers. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers, providing a link to our dedicated consultation website where interested parties would be able to view, download and provide feedback on our plans throughout the duration of the consultation period. All of these activities were publicised on our website and on social media. Previous respondents and local MPs and Stakeholders were directly contacted with information. The Hampshire Water Transfer and Water Recycling project (HWTWRP) is also holding its own project-specific consultations, separately to the WRMP, and details can be found at <a href="https://www.hampshirewtwrp.co.uk/">https://www.hampshirewtwrp.co.uk/</a></p> <p>We have fulfilled the expectations from planning guidance regarding our consultation's visibility and accessibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>Regarding cost of HWTWRP, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent having been completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. It should also be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017.</p> <p>Regarding investment in leakage reduction, our capital programmes are delivered in line with our regulatory commitments and operational needs. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period.</p> <p>Regarding sustainability, the need for HWTWRP is driven by reductions in the amount of water we can take from the Test and Itchen rivers, which means we have a shortfall of some 192 million litres of water a day during a drought. These ecologically-sensitive chalk streams</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>support a wide variety of species and deserve protection, but they also supply water to more than 750,000 people. We need to find new sustainable sources of water to help keep taps and rivers flowing. HWTWRP will make up a significant percentage of this deficit, providing 90 million litres of water per day to residents in Hampshire.</p> <p>Regarding rainfall storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It should be noted however that these will be in addition to, rather than instead of, the HWTWRP with a greater need for new water resources driven by the requirement to reduce abstraction from rivers and groundwater as part of the government's 25-year Environment Improvement Plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP591   | <p>To whom it may concern</p> <p>I strongly object to Southern Water's proposed use of recycled sewage effluent, the building of a treatment plant at [REDACTED] and the storage of its output in the Havant Thicket reservoir. We get plenty of rain in this country and the above proposal is totally unnecessary, more suited to desert countries. Our winter rainfall should be stored in new reservoirs and dedicated aquifers, providing a more natural supply of drinking water.</p> <p>Southern Water's scheme will be extremely expensive to build and operate, and looks set to benefit shareholders at the public's expense. There are cheaper and more natural alternatives. Nearly 20% of Southern Water's supply is lost to leaks. Instead of the [REDACTED] scheme, Southern Water should prioritise fixing the leaks and maintaining/renewing the water mains network. It is far better to maximise the use of readily available, ready treated drinking water, than to spend colossal sums on creating more to be leaked away.</p> <p>The scheme inherently risks further pollution of Langstone Harbour and nearby waters. I live near Chichester Harbour, just a few miles from [REDACTED] and have direct experience of the deterioration in water quality in recent years. The development should not be permitted: Chichester Harbour is a designated National Landscape and has an important leisure industry to protect; the Solent is the UK's premier sailing waters. Southern Water cannot be trusted with this scheme.</p> <p>For the reasons above – and many more – it must not be allowed to go ahead.</p> <p>Yours faithfully</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="#">this link</a></p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver</p> |

| WRMP604   | <p>I cannot see the need for this comprehensive plan including 40Km pipes being laid, whose life expectance is estimated to be 60years. All for this to be maintained by the incompetent organisation Souther Water, who have been quite willing to empty sewage in the Solent.</p> <p>Apparently, we have more than enough rain water for all our needs. When I read that more pollution will be dumped into the Solent as a result of this expensive scheme, that does not seem right! What would happen to our water supply in the event of a failure of this complex system? Could Souther Water be counted on to maintain a water supply. HAVING SEEN THE PAST PERFORMANCE OF SOUTHERN WATER, I HAVE NO CONFIDENCE IN SOUTHERN WATER AT ALL.</p> <p>Why are they not repairing existing pipes which are leaking? Why not build alternative water storage systems?</p> <p>Having see the video by a local member has made me realise that they have a better understanding than Souther Water.</p> <p>Why has all this been kept out of thew public view?</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. A Water Recycling Plant would be typically expected to last 60 plus years but have a number of upgrades every 10-20 years of the electrical and mechanical plant.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.<br>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WRMP612   | <p>I strongly oppose Southern Water's plan to recycle treated waste into the drinking water supply network. I ask that Defra reject the plan. At the very least Defra must force Southern Water to defend the reasoning behind their selection of a solution that combines high cost, high risk, greatest environmental impact and apparently a large profit.</p> <p>My overriding concern is that given Southern Water's track record and their proposed use of technology not yet used in the UK they cannot be trusted to safely implement and operate their proposed approach. A further concern is that though solid matter can be filtered out I understand that it is difficult to completely remove traces of drugs (medical and recreational), heavy metals, hormones and viruses.</p> <p>How long would it be before the drinking water supply becomes contaminated? How would the issue be identified? Probably by residents falling sick rather than Southern Water being aware. Once this has happened is it possible to fully clean the supply chain, including a large reservoir, once contaminated? Risk of contamination also applies to the Langstone harbour discharges. It must be remembered that Langstone links into Chichester Harbour as well as the Solent.</p> <p>A big project such as the one proposed is high risk, will take a long time to implement and will no doubt be subject to delays. So, it will be a long time before any of its supposed benefits are realised. It would be much better to identify a number of lower risk small/medium projects many of which could be delivered more quickly. This might include increased focus on leakage.</p> <p>The original planning permission for Havant Thicket, agreed after some debate, related to storage of fresh water. I am appalled that this could be changed retrospectively apparently with no reference to HBC's planning system and residents wishes.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>All of the hormones tested in our trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all compounds are rejected by reverse osmosis membranes, for the compounds we tested, concentrations recorded were an order of magnitude lower than those found in wastewater; and in some cases, lower than levels found in natural water systems globally. Where compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine, which were measured in the order of low micrograms per litre). The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> <p>The plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. However, due to the scale of the supply-demand balance deficits and the stringent Environmental Destination targets set by the Government, we must pursue large-scale strategic solutions. Environmental sustainability is a key criterion for including options in our plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. This includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We are also exploring emerging technologies that may enable quicker or greater leakage reductions.</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| WRMP614   | <p>Southern Water has a disgraceful record of discharging sewage into the South. Coast and now they want to use Portsmouth Water's Reservoir to deal with what they are paid to do.</p> <p>There is no mention in the application of rainwater collection which would be a cheaper and more effective way of providing water locally. The idea they have would make them greater sums of money and would not provide a clean water supply and they would continue to discharge effluent into the harbours.</p> <p>Their plan ignores the link between fossil fuels and construction and climate change because their plan commits us to using more climate destroying fuel.</p> <p>There is little evidence that Southern Water cares in any way for the population that it should serve and it continues to over pay its shareholders and CEOs.</p> <p>Please DEFRA, demand that SW looks at rain water collection and is not allowed to continue with this erroneous and wildly expensive plan.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We are planning to build new reservoirs where feasible. This includes the Havant Thicket Reservoir, the South East Strategic Reservoir Option (SESRO) and the River Adur Offline Storage. However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make,</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting from April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP629   | <p>For the attention of The Secretary of State (Defra)<br/>Water Resources Management Plan Consultation (Southern Water)<br/>Water Resources<br/>Department for Environment, Food and Rural Affairs<br/>Seacole 3rd Floor<br/>2 Marsham Street<br/>LONDON<br/>SW1P 4DF</p> <p>27 November 2024</p> <p>Dear Sir,</p> <p>I write to object to Southern Water's Water Resources Management Plan [WRMP] and call on DEFRA to reject it.</p> <p>Without trawling through all the technical arguments against the scheme, which you will be fully aware of, the fact of the matter is that the Effluent Recycling Scheme that would return recycled and 'cleansed' water to The Havant Thicket reservoir is</p> <ul style="list-style-type: none"> <li>• poorly conceived - inadequate consideration of alternatives,</li> <li>• poor value for money impacting customers as well as shareholders,</li> <li>• hurriedly imposed on the pre-existing reservoir plan - very poor local engagement with communities, councils and other bodies</li> <li>• not to be trusted - it is proposed by a company that has a poor environmental record</li> <li>• of the control and management of effluent discharge</li> <li>• more suited to the geography of land that has sparse rainfall</li> </ul> <p>I fail to be convinced that it is necessary to transport treated effluent 40 miles and return it to a newly constructed reservoir in a country that stores only 1% of its rainfall.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> |

|           | <p>The unfortunate legacy of Southern Water's past actions means that its own reservoir of TRUST is at danger levels.</p> <p>To quote but one instance from only 3 years ago [Guardian Newspapers]:<br/> <a href="https://www.theguardian.com/environment/2021/jul/06/southern-water-dumped-raw-sewage-into-sea-for-years#:~:text=There%20has%20been%20considerable%20financial,which%20(8%2C400)%20were%20illegal.">https://www.theguardian.com/environment/2021/jul/06/southern-water-dumped-raw-sewage-into-sea-for-years#:~:text=There%20has%20been%20considerable%20financial,which%20(8%2C400)%20were%20illegal.</a></p> <p>"Southern Water discharged enormous volumes of raw sewage into protected coastal waters for nearly six years causing "very considerable environmental damage" because it was cheaper than treating it, a court has heard.<br/> This was "the worst case brought by the Environment Agency in its history", the court was told. Southern Water had acted "deliberately" and had reaped "considerable financial advantage" by allowing the discharges."</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>With regard to coastal waters, A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP631   | <p>Hello Defra</p> <p>I am extremely concerned about the proposal to recycle sewage effluence locally. I have a clear preference for more natural solutions such as aquifer storage, reservoirs and catchment management.</p> <p>I am surprised that it's only now at the 11th hour that I have become aware of this issue. There has been totally inadequate public consultation before this effluent recycling option was chosen.</p> <p>The plan does not strive to work with predicted changes to our climate to capture more winter rain for use in dry summers. Rainwater provides a good quality free raw water resource and we need to prioritise schemes that capture and store it for dry summers. We get plenty of rain in winter, Southern Water should be developing solutions which store that free natural water for use in dry summers.</p> <p>The impacts on reservoir water quality and biodiversity are still unknown huge concern about the environmental impact of the effluent recycling scheme, including significant impacts associated with the concentrated reject water discharge to the Solent</p> <p>Greener and cheaper alternatives are not being properly investigated &amp; brought forward energy intensive solutions makes things worse for energy security and the planet. This is a very expensive solution which is not supported by customers. I understand it's costs will be a minimum of £1.2 billion, with costs spiralling, making it very hard to believe that it will provide 'best value' flet alone the most sympathetic to the needs of the environment and it's customers.</p> <p>Thank you for considering my concerns</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) on in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |

|           | Yours sincerely                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding accumulation of substances in Havant Thicket reservoir, the advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including “forever chemicals” in the purified recycled water produced.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators’ Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> |
| WRMP640   | <p>As a resident of Havant Borough I strongly object to SW's project for transfer and recycling water in our region on the following counts:-</p> <ol style="list-style-type: none"> <li>1) Rain, which is expected to increase with climate change should not be allowed to run to waste but should be stored in aquifers or new reservoirs for use in dry periods.</li> <li>2) SW should mend leaks quicker as their current rate is unacceptable.</li> <li>3) The proposed recycling plant should not be built at Broadmarsh on the old, contaminated landfill site, which would risk contaminating Langstone Harbour.</li> <li>4) Water extraction should be closer to the tidal limit to reduce need for reform. And it should be nearer to where water is needed to avoid long pipelines detrimental to residents and wildlife.</li> <li>5) Although recycled water would be safe to drink, the different taste would, or could, cause customers to use bottled water, thus creating a high carbon footprint associated with manufacture, transport, not to mention huge problem with plastic bottles waste.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>In view of the above, I urge you at Defra to insist SW adopt a more sustainable and environment-friendly plan. They do not seem to have considered other alternatives. Please insist they come up with something better.</p> <p>Thankyou,</p>                                                                                                                                                         | <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> |
| WRMP646   | <p>Dear DEFRA</p> <p>I am writing to you to record my objection to the above plan by Southern Water.</p> <p>I am currently a customer of the Portsmouth Water Company living in Emsworth, Hampshire and I recognise the pressure that is being put on water resources in this area by the increasing population. I also understand that water companies have to build resilience into their plans to</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>guard against water shortages during summer droughts. That is why Portsmouth Water acquired land to the north of Havant and obtained planning permission to build a new reservoir to be filled by surface runoff water and water from the chalk aquifer. As a customer of the company I am very happy to be supplied with drinking water from these particular sources.</p> <p>However, this situation has now been hijacked by Southern Water who, according to their latest plan quoted above, intend to supplement the water in the reservoir with treated effluent coming from their treatment works at [REDACTED]. This treatment consists of a variety of physical, biological and chemical processes. I believe that the water will be further treated with chemicals once it has been extracted from the reservoir before it is supplied to customers. Although I am not a Southern Water customer for drinking water, if a drought situation arises in the future then Portsmouth Water will be supplying my water from the same source. I would not be happy with this. The more processes and interventions that are required to treat water derived from effluent the greater is the risk for something to go wrong.</p> <p>It strikes me that there is a parallel here with the rise of ultra processed food and the consequences of introducing chemical additives leading to an increase in disease and poor health in the population. Southern Water is condemning us to drinking ultra processed water through their plan. We do not live in a desert here. There is abundant water falling on Hampshire during the winter months. A better plan would be to find ways of capturing and storing the rainfall we need, working in tandem with nature and the environment.</p> | <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. However, The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> |
| WRMP684   | My wife and I object to your plans to recycle sewage effluent to top up our water supply in Havant. The money would be better used to replace old mains where leakage means that so much water is going to waste. We realise that you are doing this already, but to a much smaller extent and speed than what is needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We note your objection to the use of recycled water in Havant Thicket.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP685   | I write to strongly oppose the use of recycled effluent water by Southern Water as drinking water by residents of Havant, where my family live. It is a foolhardy project, based on generating profit and not concerned with the wellbeing of residents. Southern Water has the worst possible reputation for being a responsible organisation and should concentrate instead on mending leaks, investing in infrastructure and taking care of the environment. Public health and wellbeing should always take precedence over the generation of profit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We note your objection to the use of recycled water in Havant Thicket. We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We need to look at factors such as cost, volume of water that an option can provide, its resilience to climate change, environmental impact etc. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP686   | <p>When our new reservoir was first discussed it was proposed that it would be filled by the many local springs which would have given us clean, pristine drinking water... the best for the local community.</p> <p>The fact that Southern Water, one of our worst polluters, is intending to solve their problems by pumping sewage into the reservoir ( giving them a £45,000,000 profit) is a lazy and greedy way of running their business. It would be much better to spend more time and money on fixing their pipes which leak huge amounts of fresh water every day, and also in finding more sustainable methods of waste disposal . There are better and cheaper options which have been researched, but these would not bring in the profits required by Southern Water.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>Climate change seems to be bringing us increased rainfall and yet we collect only 1% of this natural resource. We could be using this more efficiently.</p> <p>We are blessed in our area with abundant natural water sources, why would we choose to pollute this amazing gift? Let's stick to the initial plan which will provide fresh, clean drinkable water for us all.</p>                          | <p>(HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option. We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history.</p> <p>We acknowledge your concerns about leakage and agree that reducing it is a priority. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates.</p> |
| WRMP688   | <p>Dear DEFRA,</p> <p>We are writing to object to Southern Water's effluent recycling proposal. We ask you to reject it and oblige Southern Water to change its plans and take us down a more sustainable, less damaging and costly path for the future, using the alternatives that already exist. We ask too that the government makes changes to the water company funding mechanism to support that.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>Alternatives: We need more sustainable solutions that work with climate change and are low energy e.g. storage options developed closer to where water is needed, to reduce the need for long pipelines and environmentally damaging, energy-rich infrastructure projects, with more reservoirs and confined aquifers to capture the heavy winter rainfall that is predicted to come with climate change. This can then be used in dry summer months. (At the moment we only capture 1% of rainfall in the UK, so there is ample scope to improve.) Capturing rainfall in this way would also help to reduce flooding. It could bring recreational and biodiversity benefits too and make use of existing, tried and tested, technology. Effluent recycling is still an unknown in this country and consumers have not had the opportunity to properly study and discuss the alternatives.</p> <p>If borehole abstractions were moved closer to the tidal limit on the River Test and River Itchen, this would reduce the priority for abstraction reform which is driving the need for Southern Water to promote and pursue effluent recycling in the first place. This is a simple, achievable solution and is supported by an ex Managing Director of Southern Water, who is not in favour of effluent recycling. It would only require a tunnel and approximately 9km of pipeline on the River Itchen, for example, to get water to [REDACTED] instead of a minimum of 40km for Southern Water's proposed effluent recycling scheme. This would mean that the whole of the freshwater section of the river would be protected from abstraction, which would restore natural flows, including in a drought.</p> <p>These solutions would enable Southern Water to protect the environment and adopt a strategy that is far in keeping with their commitment to be carbon neutral by 2030. The effluent recycling scheme would use a huge amount of energy. How can that be compatible with Southern Water's aim to be carbon neutral. Surely it undermines rather than supports that. We feel that such a plan is not only costly and unnecessary but irresponsible in our current situation as a nation that already uses vast energy resources and contributes significantly to global warming.</p> <p>Risks and costs: We believe it would be hugely costly (for the environment and consumers) and present unacceptable risks if this project went ahead (see below). It is also unnecessary as there are suitable alternatives available. However, the problem is that these have not been publicised or, we believe, given full and proper consideration by Southern Water. Instead, they stand to make huge sums of money for themselves and their investors (approximately £45m) if the effluent recycling scheme goes ahead. They need to be obliged to consider the alternatives; and we need proper, well-informed and public debate.</p> <p>Consumers will face large increases in their bills (£3m to be met for the energy costs alone) if this project went ahead at a time when many are already struggling to pay their energy bills. There will also be massive and unacceptable risks to the environment and natural world, which are potentially irreversible. Our drinking water would taste different too, which could lead to plastic bottle mountains if people didn't trust the new water. Research has shown customers do not want effluent recycling, so this is a real risk. We need to have a proper consultation with full and public debate and open consideration of the alternatives.</p> | <p>and provide a more reliable and sustainable source of water in the future. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> <p>At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>Southern Water have a very poor track record of treatment plant and pumping station failures. They have been prosecuted for pollution incidents and not taking prompt action to rectify problems. Given their failure in respect of managing existing technology, there is very little evidence to suggest that they can be trusted to manage the hugely complex systems involved in the effluent recycling scheme.</p> <p>Beside the damage to the environment with all the new works proposed, huge costs and carbon emissions, the choice of the recycling plant site at Havant as part of the effluent recycling proposals is also very concerning.</p> <p>This is a contaminated landfill site with no engineered lining. The effluent recycling proposal would mean drilling down into it to put in piles and tunnels. It would carry a significant risk of leachate. Given this vulnerability, it feels almost inevitable that the project would have a negative environmental impact on the harbour and surrounding area, as well as being hugely costly financially to develop and maintain. We don't need it! If all else fails and Southern Water's effluent recycling proposal were to be accepted, despite all the objections, they must be told to find an alternative site for the recycling plant.</p> <p>As already stated, we feel that we need a plan that strives to develop more sustainable solutions first. It is also vital for Southern Water to be obliged to increase its targets for maintenance and fixing leaks and that this is given high priority. 19% of the water that customers pay to have treated is currently lost to leakage (100m litres per day) with a further 3% lost before reaching the treatment works. This problem is not being addressed fast enough - perhaps because 'maintenance' does not attract significant funding or profits. If the government changed the water industry funding mechanism so that maintenance became a priority and it was profitable for water companies to increase the rate at which they fix leaks and replace ageing pipe networks, this would benefit everyone - them, the consumer and the environment. It would make a huge saving of resources possible. The mechanism we have favours infrastructure heavy solutions instead. That can't be right. We need this to change and for government to recognise that and make the change.</p> <p>We are experiencing climate change and need to find solutions that work with that. We need to make use of existing resources rather than incurring huge costs and using vast amounts of energy and untested technology in sensitive areas, with all the 'unknowns' and risks associated with the works required to establish and maintain effluent recycling works. Please reject this proposal and make Southern Water listen and consider the alternatives so that they put the environment first, before profit.</p> <p>Yours sincerely,</p> | <p>decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>With regard to cost, Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. In its business plan for the next five-year regulatory period, starting from April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>The investment model that we utilise needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP696   | <p>Re: Southern Water Public Consultation</p> <p>I am writing as a resident on Hayling Island. I have heard that there are approximately twenty fresh water natural springs in Havant. Along the A259, the coast road, there are many place names with the word 'bourn(e)' which according to the Collins dictionary states: in British English, mainly southern England a stream, especially an intermittent one in chalk areas. In American English, bourn or bourne – a brook or stream.</p> <p>It seems that fresh water is abundant, don't let it all go into the sea. Definitely, it's a crime to mix it with recycled sewage effluent and then to pump it into our taps. I drink tap water every day. I do not drink tea or coffee. I do put the tap water through a Brita filter jug at home. What would I have to do, I would have to buy bottled water, water in plastic bottles.</p> <p>If you mention the word 'reservoir' – like the one at Havant Thicket, especially at a time when we have had a lot of dry days in the summer, and there is a threat of limited use of clean water, to have a reservoir sounds like a great idea, but Southern Water have another idea. People don't imagine that the reservoir is also going to be storing recycled sewage effluent. No, it's the word 'reservoir' which people think is a great idea. The recycled sewage effluent - along with natural spring water – is what would be pumped into your home as drinking water. I don't understand why this is considered a solution. There must be money in it or why bother? We are about to enter 2025 and there is plenty of natural clean water and rain fall available to us in this area. The earth is providing it for us to use. We need to harness it properly before it goes into the sea. The cost of this scheme from Southern Water to pump recycled sewage water to Havant reservoir (which is still in construction stage) and into our homes for us to drink, along with a 41km pipeline must be considerable! According to the proposal, it is a 1.2billion scheme which we would ultimately be paying for, it is not necessary.</p> <p>Yours faithfully.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With regards to your suggestion of using coastal spring water, the company Water Resource Zones do not always extend to the coast as might be expected (e.g. especially in Hampshire), as the resource zones are distinct and separate from the physical infrastructure of the Water Supply Zones. Additionally, many coastal springs are often relatively small from a public supply perspective, and such spring discharges typically show a strong seasonality and decline significantly in summer periods. Or abstractions at these locations can be more prone to saline intrusion. So coastal springs general tend to offer poorer drought resilience and security of supply. Similarly, associated coastal wetland environments dependant on such smaller springs will also be drought sensitive. However, such options (or those available within our water resource zones) will continue to be reviewed and reconsidered in future water plans.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink.</p> <p>We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the</p> |

Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. Our PR24 Price Review is being redetermined by the CMA.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see: <a href="#">this link</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP700   | <p>I am replying to the consultation relating to Southern Water's proposed Water Resources Management Plan.</p> <p>I made comments about this some time ago and I know that their proposals have met with a great deal of opposition from all corners of Hampshire. To be honest, I feel that the consultation exercise is just a sham in order to make it appear that the views of local people, and experts, have been listened to. There are so many things that are wrong with the Plan that I don't have the time or energy to try and list them all. However here are some of my main concerns.</p> <ol style="list-style-type: none"> <li>1. Southern Water has not seriously considered more cost-effective and sustainable solutions first, such as collecting more rainwater during the winter which would help to reduce flooding and which is now more of a problem than drought. This would also improve biodiversity and it is not nearly as costly as what is being proposed.</li> <li>2. Southern Water is proposing to use a new effluent recycling process that has not been used in the UK before for public water supplies. If Southern Water can't manage to look after the supply system that it already has in place, how can we have faith that they will be able to cope with a far more complex process? Or, are they really in favour of this scheme because it will make a lot of money for them? Southern Water has been prosecuted many, many times for pollution incidents, massive leakage events, and a poor record regarding its treatment plants. If they get permission for this new, very complicated, process who will have to pay to put things right when things go wrong – the consumers, of course, and never the company.</li> <li>3. Southern Water's strategy is the opposite of climate friendly or sustainable. Building and running the scheme will have an extremely high carbon footprint. Did they seriously consider any more sustainable solutions? For example, look at storage options that are closer to home?</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers. <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>With regard to possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour.</p> |

|           | <p>4. I am particularly concerned that the proposed recycling plant at Havant will be built on an already contaminated landfill waste site. There is an enormous risk of damage and contamination to Langstone Harbour from the initial building work and the ongoing running of the plant.</p> <p>These are just a few of my concerns. I am not an expert but I know experts who agree that this Plan is not the right answer. Southern Water should start by doing what they should already be doing: fixing leaks, replacing pipework that is no longer fit for purpose, etc. etc.</p> | <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP703   | <p>In response to the revised water resources management plan proposed by Southern Water, I have read the proposals and strongly wish that Southern Water would take their heads out of the sand and be more realistic with their water management plan.</p> <p>NORWAY????!!</p> <p>I honestly thought this was a joke! Having lived in Yorkshire for several years I saw a reservoir being filled with bottled water in an emergency. How utterly ridiculous that was, but to bring it from Norway with all the environmental and natural contamination issues is simply madness.</p> <p>The effluent recycling scheme is also extremely expensive, damaging to the environment and simply disgusting. Surely there are better ways, perhaps developing existing infrastructure?</p> <p>Why can't they focus on the structure they have currently in place and fix the leaks, instead of creating more problems and possibilities of environmental damage on a huge scale, not to mention hikes to customer bills?</p> <p>Leave the chalk streams alone, help customers to save water using water butts and other incentives, educate customers both domestic and commercial in water schemes, just don't throw good money after bad with half thought out, hair brained, short term, extremely risky and costly plans. If we are so short of water, why is there flooding? Can this water not be saved?</p> <p>They must be made to rethink the plans.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>With regard to the viability of sea tankering, this option is no longer included in our plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised</p> |

We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP712   | <p>I wish the following comments to be taken into consideration. I strongly object to the revised plan.</p> <ol style="list-style-type: none"> <li>1) This plan details the construction of a costly, environmentally damaging effluent recycling facility plus the need to transport the water 40 km away to [REDACTED]. This facility would have to run all day, every day, and every year even at times when water is plentiful. The carbon footprint alone is huge and the risk of contamination from chemicals as well as a leak into the new reservoir cannot be ruled out. This is not a long term sustainable solution.</li> <li>2) I sail in Langstone Harbour and so am familiar with the discharge of untreated sewage into the harbour already. How can I trust a firm to operate a technically complex effluent recycling scheme so close to the harbour on a contaminated landfill site when they are already polluting the environment, sometimes for weeks at a time.</li> <li>3) Why haven't Southern Water made greater efforts to reduce leakage of treated water that we have already paid for? Why not do that first before investing in a costly, environmentally damaging scheme. Once that work is completed, then estimate what is needed. Fix the underlying problems first please.</li> <li>4) The proposal to tanker water in from Norway is absurd. The risks of importing non native species would be high and the water itself is incompatible. This water would have to be treated to be of the correct quality. This is short term thinking at its very worst.</li> <li>5) Southern Water states that they are planning for a once in 500 year event. For that they will build a costly, damaging facility that may not even be required instead of fixing existing problems.</li> <li>6) Little effort is put into education of households to reduce their water consumption. Perhaps Southern Water do not see that as a high priority given that it may reduce their profits?</li> </ol> <p>In conclusion, it seems to me that Southern Water is planning a major investment in a facility that may not be required instead of looking at less expensive, environmentally sound local solutions. The cost for this would be passed onto the consumer. It seems to me that Southern Water is looking at profits and pleasing their shareholders, rather than their customers.</p> <p>As stated before I strongly OBJECT to the revised plan. I have copied in my MP so that he is aware.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the</p> |

|           |          | <p>landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>With regard to possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers. <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>With regard to the viability of sea tankering, this option is no longer included in our plan..</p> <p>All water companies in England and Wales are required to plan for a drought of a 1-in-500 year severity. This requirement is set by the government, not by water companies.</p> <p>Our home visits programme and schools programme are specifically targeted at raising awareness about water use and providing helpful tips on reducing water consumption in homes. In AMP8 we will be building a Water Calculator to help educate customers on their own water use and provide useful practical advice on how to save water.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company</p> |

| WRMP720   | <p>Defra,</p> <p>As a resident of Havant I object to the proposed revised Southern Water plan . They current appear to be unable to maintain their existing infrastructure to a reasonable standard and I believe that this should be addresses before they are allowed to proceed with any major future plans. Maintaining the existing infrastructure properly could result in a great reduction in lost clean water and should be their priority.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP724   | <p>I am objecting to Southern Water's WRMP plans because there has been inadequate consultation on the nature of the proposed project. As a resident of Havant living in close proximity to the proposed reservoir and water recycling plant, I attended some of the events held locally to explain the scheme. I was surprised to find that this scheme will bring no benefits to local people as the water to be produced will be pumped for consumption miles inland of here.</p> <p>Having collected the documentation for the official consultation process I found it far too technical to complete. In order to provide feedback you were expected to wade through multiple pages of information before you could give a response. I'm sure the complexity of the process has reduced the level of meaningful feedback received and may have given the impression that there are few objections as a result. It is the process which is at fault and the company has not made a meaningful effort to contact ALL the people in Havant that are affected by this proposed development to obtain their feedback.</p> <p>Furthermore, there are alternative strategies that Southern Water should be focusing on instead:</p> <ul style="list-style-type: none"> <li>• Reducing the amount of leakage in the system which loses almost a fifth of the water being treated.</li> <li>• Reducing the pollution caused in the rivers and seas by the inefficient processes used to manage sewage.</li> <li>• Improving the collection of rainwater rather than engaging in an expensive project to recycle dirty water.</li> <li>• Investing in more sustainable solutions rather than consuming more resources on a huge and disruptive construction project.</li> </ul> <p>I trust these objections will be considered in deciding the future of this project.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p>"<a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a>" Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> |

|-----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> |
| WRMP725   | <p>To whom it may concern,</p> <p>I would like to record my serious concerns about Southern Water's plans for a new effluent processing plant. I have outlined these concerns below:</p> <ol style="list-style-type: none"> <li>1. The lack of consultation time.<br/>This seems rushed. Most people lead busy lives and will not have appreciated the scale and scope of the planned works.</li> <li>2. The lack of investment in fixing leaks<br/>It is astonishing how much water is lost from leaks in the current infrastructure. Why not fix the bucket with a hole in it rather than buying a new bucket?</li> <li>3. There is plenty of rain<br/>Why don't we collect more of the rain that falls rather than waste energy recycling effluent?</li> <li>4. The effect on the environment</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p><b>1).</b> In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>Reports have suggested that the proposed plans will be very damaging from a carbon footprint point of view. Other options are available. For example , why not put the storage of water nearer to where the water is needed?</p> <p>5. Profit motive<br/>Southern Water is a business. It is loyal to its shareholders not the consumers. We as consumers have no choice where we get our water from, or how it is disposed of. The priority for Southern Water is to make money. Inevitably the environment takes a very poor second place in the evaluation of projects like this. The dismal record of Southern Water and the number of pollution incidents would surely set alarm bells ringing. Perhaps they will be successful in persuading the powers that be that this time they're going to get everything right. Personally, I doubt it.</p> <p>I appreciate that this is a brief response to a massively complex question. I also recognise that there are discussions and debates still outstanding. That is why my first point is so important.</p> <p>Please take my concerns seriously<br/>Public confidence in hitherto respected organisations is at rock bottom. Please do not rush to add further fuel for the cynics.</p> | <p>targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We have received 1,176 responses as part of rdWRMP24 consultation. Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p><b>2).</b> The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p><b>3).</b> Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p><b>4).</b> As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>5). In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>With regards to your point about public confidence in Southern Water: We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers. See link: <a href="#">Our Business Turnaround Plan   Southern Water</a></p> |
| WRMP728   | <p>Good afternoon</p> <p>I should like to register my opposition to Southern Water's proposed recycling of sewage effluent at [REDACTED] to top up our water supply and their proposal to build a treatment plant next to the coast at Broadmarsh where pollution already leaks out into the harbours around Emsworth and Langstone.</p> <p>The proposed cost of up to £1.2 billion is outrageous and money would be better spent at looking at more sustainable ways to collect and store winter rain and investigate a faster way to renew water mains and replace ageing pipework. This must surely be a more environmental and sustainable way to proceed.</p> <p>Their current proposal to treat the final sewage effluent at Havant Thicket has never been tried in the UK before and was never mentioned in their original planning for development at the Havant Thicket site.</p> <p>The risk of pollution with this plan at the Havant Thicket site and potential further damage to Langstone Harbour and the Solent is unacceptable.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note your objection to the use of recycled water in Havant Thicket. We are planning to build new reservoirs where feasible. This includes the Havant Thicket Reservoir, the South East Strategic Reservoir Option (SESRO) and the River Adur Offline Storage. However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>With regard to planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| WRMP732   | <p>I strongly object to Southern Water's latest Draft Water Resources Management Plan. Having heard a talk, listened to advice from a friend in the water industry and read the Havant Matters website <a href="https://havantmatters.org/">https://havantmatters.org/</a> and Southern Water's webpages, I am very concerned to find that the latest plan could go-ahead: without the majority of the public having been made aware of the need to take part in yet another consultation, without the public having been presented with all the facts by Southern Water, without the need for local planning consent and with huge environmental impact and cost to residents of the South of England. It was my belief and that of many others that the Havant Thicket Reservoir had received planning permission on the basis that it would be for the storage of rainfall and natural spring water sourced from chalk-fed springs around Havant and Bedhampton in the winter when water was plentiful, and would be used to maintain the water supply in times of water shortage and drought. The loss of ancient woodland, which would be destroyed during its construction would be offset by tree-planting and biodiversity gain from the new habitat, provided by this unique chalk spring-water reservoir. It was believed that any change in its use was protected by planning laws and would require further local planning consent. The original emphasis was very much on an environmentally-led project.</p> <p>This emphasis has been changed drastically as the reservoir would now become an environmental buffer lake, necessary for the operation of the effluent recycling scheme, receiving treated effluent at a rate of some 30Ml per day (the equivalent of 12 Olympic-sized swimming pools!) every day of the year, since the plant has to work 24/7 for 365 days of the year to keep the process going, whether or not drinking water is in short supply. What an incredible waste of the chemicals and energy required to highly treat the water then pump it all the way up to the reservoir only for it to be mixed with what is essentially untreated water again. And that's before you look at the effect of this influx of treated water on the wildlife in and around the reservoir.</p> <p>Then we have to look at the siting of the effluent recycling plant. Yes, I'm sure it is cheaper to acquire old landfill than land which could potentially be used for farming or housing but what about the danger to the environment. Langstone Harbour has already been overwhelmed by the outfall of treated and often untreated sewage from [REDACTED]. Are we now going to add to this, the chance that piling into the landfill for construction will release toxins into the nearby Hermitage stream and possibly into the chalk aquifers which drain south into the harbour? The harbour wildlife is under threat already and any human leisure activity will be even further</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With regard to planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>As a major abstractor of water in the South East for public supply, and with responsibility for the conveyance of wastewater from homes and businesses for treatment before it is returned to rivers or sea, Southern Water plays a critical role in carrying out these duties whilst protecting and enhancing the environment. Further information and reports on how we achieve this can be found on our website <a href="https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/">https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/</a></p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           | <p>restricted than it is now. I certainly don't like kayaking there any more and wouldn't dream of swimming.</p> <p>Then, a 40 km pipeline will be needed to get the treated water to [REDACTED]. It will need to run over the top of Portsdown Hills (going to a height of about 130m), cut through four small streams and countless fields, hedgerows and woodlands and will do untold damage to our already fragile ecosystems in this shamefully nature-depleted country. Huge amounts of energy will be required to build the pipeline and then to keep pumping water such long distances over the hills.</p> <p>The whole project has a huge carbon footprint and I find it very hard to see how this fits in with Scope 3 Emissions and Capital Carbon, of Southern Water's 2025 Roadmap to Net Zero <a href="https://www.southernwater.co.uk/about-us/our-plans/net-zero-plan/">https://www.southernwater.co.uk/about-us/our-plans/net-zero-plan/</a>.</p> <p>It will cost £1.2 billion to construct and around £3 million to operate per year, not taking into account the cost of extra pumping stations to transfer the water. Those of course are the estimated costs which, looking at every other huge infrastructure project, will likely treble by the time the project is completed. And all this is for a plant which has an operational life of just 60 years, after which it can no longer be used. My suspicion is that every Southern Water customer will be paying for this, for decades to come while Southern Water shareholders walk away with the profits from this huge infrastructure project.</p> <p>This is all assuming that Southern Water will be able to run this plant which operates using a complex procedure and requires high levels of maintenance. The system of self-regulation and reporting currently in place, frankly, offers me no reassurance at all. What's to stop the whole reservoir becoming contaminated? Their past record does not instil confidence.</p> <p>And of course, none of this will make our rivers and seas any cleaner but will in fact add to the load as the concentrated reject water from the process will be discharged into the Solent and reject solids will probably be added to the treatment works at [REDACTED].</p> <p>There are several much more sustainable environmentally friendly alternatives listed on the Havant Matters pages which make much more sense when we are in the middle of a climate crisis and should be aiming to get to net zero as soon as possible. Reducing the 100 million litres a day that Southern Water loses to leaks would be a good start! Collecting more than just 1% of free rainfall would also be good.</p> <p>Why are Southern Water going for this huge project? Is it purely driven by profit? Are Macquarie planning to do the same to Southern Water as they did to Thames Water?</p> <p>Please listen to all the arguments but for the sake of all Southern Water customers' pockets and our attempts to reduce our carbon footprint for our children and our children's children's future, stop this project and reject Southern Water's latest Draft Water Resources Management Plan. It is not a sustainable solution.</p> | <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The increase in energy use is needed to power the technology that will provide water to customers and reduce abstractions thereby protecting the county's rare and sensitive chalk streams.</p> <p>We have included measures to avoid or minimise carbon emissions throughout the project's lifecycle, including using resources sustainably and, where feasible, incorporating a design that is energy efficient, minimises carbon and is climate change resilient.</p> <p>Through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>With regard to possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> |
| WRMP734   | <p>I would like to voice my concerns and objection to, the above, proposed scheme, particularly regarding the inadequately researched impact of financial and environmental costs to customers and local area.</p> <p>I was very enthusiastic when the original Reservoir Plans were shared with local residents, many more reservoirs would seem an obvious solution, to collect and manage Britain's plentiful rainfall that is not currently being used effectively.</p> <p>However, these additional plans need further debate on other, possibly better methods before final, irreversible , costly decisions are made.</p> <p>The decisions should prioritise the prevention of the scandalous sewage releases and better avoidance methods researched and implemented. Langstone Harbour would appear to be put at even greater risk of pollution, environmentally, if Broadmarsh is selected for the effluent recycling site. It has been obvious to anyone for years that the land is unstable, by the constant changes in road surface levels.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Regarding storage, we have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>I have no confidence that the views of local people will be considered but this scheme surely should be given greater debate and alternative options offered.</p> <p>I would like my three grandchildren to be able to enjoy safe swimming from our wonderful local beaches, once again.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP735   | <p>Dear WRMP Team,</p> <p>Instead of a Recycling Plant at Sandown, the Orca Iceberg De-salination buoys in groups, could deliver 53,000 litres of fresh water a day.</p> <p>They are wave powered and if stronger waves are required than are available off Sandpwn, then south of the Island should surely be possible. Not so much shipping there either. Each unit is said to produce up to 1000 litres a day.</p> <p>Best wishes</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Thank you for your comments. Suggestions are gratefully received.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP736   | <p>I have reviewed this Plan and ask Defra to reject it principally because the WRMP does not properly consider other options to develop drought resilience including increasing the reduction in leakage, further transfers from outside the region, location of abstraction points to allow an offtake and new reservoirs. Further, water quality issues are not adequately considered, and it does not properly undertake the required statutory Habitat Regulations Assessment.</p> <ol style="list-style-type: none"> <li>The failure to consider other options allows Southern Water (SW) to make the case for expensive and damaging proposals that will take time to deliver. In particular other aquifer storage schemes are not considered, it is inconceivable that abstraction will cease entirely even in winter or at times of high flows and ground water and this water availability has not been built into the proposals. Defra funded work at [REDACTED] has not been progressed and this option is therefore not properly considered. Cheaper and smaller schemes in the Western Area have been rejected on timescale while effluent recycling with a longer time scale is a preferred option.</li> <li>The case to tanker in water from Norway was previously considered expensive and unsound and, having been rejected once, it should be again. Only long term solutions should be being considered.</li> <li>No cost benefit of the options has been provided and thus there cannot be rational decision making. This also applies to carbon budgets. The costs of the water transfer schemes from [REDACTED] are extortionate.</li> <li>The proposed recycling options have significant environmental and cost implications which are not properly explored, for example in terms of running time, water chemistry, pollution and construction impacts.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback. We have provided a response to each of your points below;</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. Work formally paused on investigating and developing Fareham Wastewater Treatment Works as a back-up option in May 2023, in agreement with RAPID, and so we have not developed it to the same level as the Hampshire Water Transfer and Water Recycling Project (HWTWRP). A Back Up option was also identified. This involved transfer of recycled water from a water recycling plant to Itchen WSW via an environmental buffer. Desalination options were removed from further consideration at this stage. The outcome of the options appraisal process was supported by RAPID at Gate 2. Although both HWTWRP and the Back Up option were able to meet requirements of supplying 75MI/d in the Western Area (as required by WRMP19), and were able to meet the identified future need of up to 90MI/d, HWTWRP presented significantly better value for customers and was better able to meet long-term regional supply requirements due to improved adaptability. Therefore, the focus was on progressing HWTWRP as the selected option.</p> <ol style="list-style-type: none"> <li>There are regulatory and statutory requirements for public water supply to be more resilient to droughts and to meet additional demands associated with growth and development. The HWTWRP will address these demands by re-using water that has already been used for public supply, rather than taking more water from the environment during times of low flows. Sea tankering from Norway is no longer included in our plan.</li> </ol> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           | <p>5. Some recycling options have timescales which appear unachievable eg Littlehampton to Pulborough by 2031.</p> <p>6. The potential for nutrient and pharmaceutical loading on Havant Thicket reservoir and the accumulation in sediments with subsequent environmental issues has not been considered. Algal blooms are well known to occur in reservoirs even where wastewater recycling does not take place. Pharmaceutical loading is an increasing problem. Traces of many medicines are found in Chichester and Langstone Harbours and movement of these contaminants to the reservoir and thus to drinking water as will occur. As the use of the reservoir continues it is likely that there will be increasing concentrations of these contaminants which will also occur in the sediments. Allied to this is a complete change on the basis of which the concept of the reservoir was 'sold' to the public.</p> <p>7. The HRA does not appear to have been properly undertaken.</p> <p>'The HRA screening is precautionary, and to be compliant with case law, does not take into account the effects of mitigation measures. In consequence, the majority of options needed to be screened for the more detailed appropriate assessment as significant effects were considered either likely or uncertain for a range of European sites. However, once the appropriate assessment was able to take into account the nature of the options and the potential for mitigation through scheme design and delivery, the September 2023 HRA (Annex 18), plus the July 2024 HRA Addendum (Annex 18A61), concluded that for virtually all of the rdWRMP24 options, there will be no adverse effects on any European protected sites (and Ramsar sites) that cannot be reliably avoided through scheme design or mitigated with measures that are known to be available, achievable and likely to be effective at the project-level. However, it is recognised that there are some residual uncertainties associated with some options due to the absence of detailed design and the long planning horizon for delivery. In these instances, this does provide substantial time for any residual uncertainties associated with these options to be resolved and (if necessary) the option set aside and replaced in future WRMP cycles.</p> <p>The HRA of the draft WRMP24 provides a strategic, plan-level assessment to support the WRMP. It is not an application-specific ("project" level) assessment. A more detailed, project-level HRA (with Stage 2 Appropriate Assessment where required) will be needed to support any actual planning application and environmental permit or consent.'</p> <p>Guidance on the assessment of plans requires firstly the Stage 1 screening for likely significant effects – this requires that the plan has no likely significant effect either alone or in combination with other plans or projects. From line 3 in the extract above, it can be seen that this is not the case. Stage 2 is the Appropriate Assessment and Integrity Test. This is undertaken considering further mitigation where required. The question is, is it possible to ascertain no adverse effect on integrity? From para 1 above, it can be seen that this is not met. Individual 'projects', and this would certainly include the Water Transfer Schemes (see second paragraph above), will need to be considered carefully as they form an integral part of the Plan and failure to pass the</p> | <p>2) Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>3) We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding sustainable water supplies into the future means we need to look at all viable alternatives to the sources that have been traditionally used. Water recycling creates a safe and sustainable supply of purified recycled water that goes through several stages of treatment before it is sent into supply. Water recycling is already widely used around the world – in Australia, Singapore, the USA and Belgium. Southern Water is one of several water companies in the UK developing water recycling plants to create new sources supply for the future. A detailed report will be published later in the year, with the results informing additional assessments including the Environmental Impact Assessment for HWTWRP. For more information about water recycling please visit: <a href="http://www.southernwater.co.uk/water-recycling">www.southernwater.co.uk/water-recycling</a></p> <p>4) Some of the options in WRMP24 are carried over from previous WRMPs and their delivery timescales reflect the point at which the additional water resources are needed, in tandem with work already underway to progress the project.</p> <p>5) Regarding possible algal blooms, purified recycled water is extremely clean. Water quality in Havant Thicket reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. Regarding accumulation of substances in Havant Thicket reservoir sediments, the advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>6) The WRMP HRA recognises where uncertainty remains regarding the effects some options may have upon Habitats sites, and where further investigation is required to address these uncertainties and progress project level assessment. The WRMP HRA will be updated to expand on the investigation required to address these uncertainties and set out, in principle, the programme and sequence of activities necessary to address the HRA process. It should be noted that the Environment Agency, along with Natural England have provided detailed comments regarding the HRA for the WRMP. Work is being undertaken to address these comments and make any necessary changes to the HRA so that it incorporates and reflects regulatory comments. Please refer to SoR Annex 4 Ref for our response to these as well as for reference to changes made to the HRA. It is also worth noting that individual projects contained in the WRMP, such as HWTWRP, will be subject to additional more detailed environmental assessment as part</p> |

|           | <p>Habitats Regulations tests will mean that they cannot be delivered leading to failure of the Plan. On this basis, it is likely that the Appropriate Assessment moves to Stage 3, Alternative solutions which has not been undertaken.</p> <p>Further no consideration has been made as to the effects of constructing a Water Recycling Plant on a former land fill site close to the Chichester and Langstone Harbour SPA with particular, but not exclusive, regard to the release of contaminants and the impact on the European site.</p> <p>I urge Defra to reject this draft WRMP.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>of the DCO/planning application process. Further information is available on the dedicated project page; <a href="https://www.hampshirewtwrp.co.uk/">https://www.hampshirewtwrp.co.uk/</a></p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project on designated sites is part of our ongoing project level HRA and Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP737   | <p>Absolutely abysmal.</p> <p>I've just heard this on local radio. Why has Southern Water not informed its customers by using a mail drop? They certainly have not informed me as a Portsmouth resident of it.</p> <p>I have major concerns with this.</p> <p>I want to understand why there are no alternatives for Southern Water...Is this the real reason? This effluent recycling scheme (the very thought of which is certainly off putting to say the least) will deliver a profit of about £45 million pounds to Southern Water. I have NEVER agreed with the privatisation of our infrastructure! This kind of profiteering paid for by customers is not acceptable. We see it with the Electricity and Gas companies, which generate huge profits for its share holders and bosses, but all at the expense of the customers.</p> <p>The cost in planning this scheme ( £1.2 billion) to recycle treated waste water into Havant Thicket Reservoir, along with 3 other recycling schemes, Southern Water are taking us down a very slippery slope. Sustainable solutions first, that work with climate change to collect the estimated increase in winter rainfall and store it in new reservoirs for use in dry summers. I just cannot believe that we now only collect 1% of the rainfall in the UK. Not only that, but we have 2 weeks of sunshine and we have a ban on hosepipes and the water companies declare a drought. The collection and storing of rain water in winter is a no brainer, it would also help reduce flooding and also provide recreational facilities for our communities. Storage options need to be developed closer to where the water is needed, so that long pipelines that damage our countryside and wildlife are not required.</p> <p>For years we have known about the state of our pipelines. In the city, one of our major roads into Portsmouth has been closed due to leaks, not once, but multiple times, eventually forcing the renewal of several hundred meters of pipe. The money should be spent on renewal of the existing infrastructure and preventing water wastage. 3% of water Southern Water take from the environment is lost before it even reaches the treatment works. A further 19% of water that</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>customers have paid to treat is currently lost to leakage in the distribution network as mentioned already, and that's more than 100 million litres of precious water lost every day. Southern Water must be mandated to deliver a much faster programme of renewing water mains to replace their ageing pipe network, or they will never get this age old leakage issue under control. Currently they only have a replacement rate of just 1 in 1000 years, and bearing in mind a water main is only designed to last 120 years. The whole issue is just unacceptable.</p> <p>And Lastly, how can we trust Southern Water with the complex technology required to treat final sewage effluent? I understand it has not been used for this purpose before in the UK? Are we a trial? Guinea Pigs, another way to reduce the population? (OK being slightly sarcastic) If they can't fix the leaks, you tell me what confidence can we expect, that contaminated water will not leak into the "water for consumption" arena? They are guilty already of massive discharges of raw sewage into the sea, which are blown back onto the beaches where people go for recreation. Southern Water have a proven poor track record of treatment plant and pumping station failures, many prosecutions for pollution incidents and failure to take prompt action to rectify problems. The risk of pollution to the Havant Thicket Reservoir as well as damage to Langstone Harbour and the Solent is unacceptable.</p> <p>As I suspect, despite the huge investment in such a hairbrained scheme (which the customers will be forced to pay for I'm sure) is it the "easy" profit what is fueling this fiasco? The fact that it takes a radio station to inform Southern Water Customers of this garbage, and NOT Southern Water themselves, stinks of pushing something through the back door "unseen" where the ONLY beneficiary is Southern Water, its shareholders and its bosses.</p> <p>If despite, all of the concerns about whether effluent recycling is needed, the significant environmental impacts, and the enormous costs to build &amp; operate are to be ignored, AND Southern Water push ahead with their leaky plan, they must be told to find an alternative site for the recycling plant at Havant. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great to the environment.</p> | <p>successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a> It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>With regard to possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP738   | As a resident of Horndean and a regular cyclist around the new Portsmouth, Havant and beyond, I am very concerned about the details behind Southern Waters Draft Water Resources Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>The core reasoning and approach being taken by the corporations involved seem to be seriously flawed, and proposals that are not in the public interest have been put forward. Furthermore, the scheme risks severe environmental damage in the areas that the overall scheme will directly affect and create a deplorable financial impact on the public purse, much along the lines of other large projects that have recently been in the news.</p> <p>My own research on the matter has identified:</p> <ol style="list-style-type: none"> <li>1. Environmental Impact: There are significant worries about the ecological consequences of the effluent recycling scheme, particularly the highly concentrated reject water that will be discharged into the Solent, which will be four times more concentrated than the current sewage effluent.</li> <li>2. Risk to Langstone Harbour: Developing the effluent recycling plant and deep tunnel shafts on the contaminated landfill site at Broadmarsh poses a significant risk to Langstone Harbour.</li> <li>3. Sustainability Issues: The solution is not sustainable, especially considering it will be built over 25 miles away from where the recycled water is needed.</li> <li>4. High Costs: The project is extremely costly, with a minimum estimated expense of £1.2 billion. Costs are expected to rise, making it difficult to justify providing 'best value' for customers.</li> <li>5. Pollution Risks: There is a significant risk of pollution from the recycling plant, particularly if Southern Water does not maintain it properly. Additionally, there are no plans for independent monitoring of the discharge into the reservoir.</li> </ol> <p>Finally, based on the conversations I have had with my local friends and neighbours, the approach taken by Southern Water to ensure that the customer and population of the affected area understand the proposal and the reasoning behind it has been, frankly, Machiavellian. Very few people are aware of the genuine proposal, its potential actual cost to the customer and the real environmental impact the scheme will have on a birth-to-death basis over a lifetime of 60 years.</p> <p>I strongly urge you to stop this effluent recycling system scheme moving forward. The planning is rushed. The alternatives have not been researched effectively, and their impact on the local area will be significant. It seems that there is only one organisation that will gain from this scheme, and that is Southern Water itself, which will gain financially as they are allowed to make a profit on schemes of this type.</p> | <p>Regarding effects of recycled water on the chemistry of Havant Thicket reservoir, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                      |
| WRMP739   | <p>I am writing to register my concerns regarding this plan in the hope that you totally reject it. Given Southern Water's appalling track record for dumping effluent into the Solent they are obviously not fit for purpose managing or fulfilling their current remit!</p> <p>The notion that they could implement &amp; properly manage such a greedy money spinning scheme without harm to the public &amp; the environment is preposterous.</p> <p>They don't even have the capacity to deal with telephone enquiries efficiently &amp; effectively, this I know from personal experience.</p> <p>The notion of drinking water that has been 'processed from effluent' by a manmade system is totally unacceptable when 'Greener' natural processing is available .</p> <p>Natural systems for purifying water have evolved over millennia so we don't need potentially unsafe water piped through toxic landfill, causing further risk of contamination.</p> <p>As Southern Water's ineptitude prevents them from maintaining the current system adequately ,heaven knows how they could possibly manage such a scheme, especially given their track record for prioritising profits over a safe environment.</p> <p>In my own garden I collect &amp; use as much rainwater for watering plants &amp; keeping my ponds topped up &amp; healthy ( as do many other individual households ) as possible.</p> <p>It's pity that Southern Water is incapable of applying similar resourcefulness on a grand scale due to its inability to properly maintain the current infrastructure.</p> <p>This whole project appears to be yet another example of prioritising revenue over safety , the environment &amp; public service ,especially when water is such a precious resource that is 'God given ' &amp; not a StockMarket commodity .</p> <p>I am also deeply offended that ,until the Green Party informed me of these potentially life influencing proposals , I was totally oblivious to them.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> |

|           | I sincerely hope that you take my , & similar , opinions into account before you take any drastic decisions to approve this very risky proposal!                                                                                                                                                                                                                                                   | <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding the potential to develop sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>Regarding storage, we are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |
| WRMP740   | I strongly object to southern waters proposals on 5 accounts 1-the cost 2-The environmental impact on all the proposed work areas 3-The change from the original plan of filling the reservoir with pumped spring water 4-The actual ability of southern water to complete a project on time and within budget 5-The cost and inconvenience that will occur should all the proposed works go ahead | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP741   | Please can you see sense and rethink the ability of Southern Water to manage the South's water supply. It looks as if the Accountants are overruling engineering sense for short term gain and inviting very large financial and environmental costs in the future.                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>The UK government need to alter the pricing mechanism that Southern Water exploit in spending unnecessarily on new infrastructure such as pipes and equipment for recycling waste water to drinking water and infrastructure to import potential fresh water from Norway. What needs new infrastructure is waste water treatment, and stop pumping raw sewage into our rivers and sea.</p> <p>Southern water need to maintain its existing pipelines to increase the amount of natural water it uses and remove excess fresh water, reducing flood risk to houses built in flood plains. Why pay for a natural resource via recycling when there is plenty of fresh water available??</p> <p>Southern Water produce volumes of information which the public have little time to piece together They do not publish detailed analysis on the evaluation of the options. Public consultations are maxed out so not everyone can attend a meeting face to face.</p> <p>If DEFRA or OFWAT havent got the expertise, then an independent consultancy and/or academic panel together with informed bill payers should provide an evaluation of the options. I am an engineer advising on supply of water as a natural resource and processing of waste water should be a simple problem to solve.</p> <p>It seems that DEFRA is the only organization that can make Southern Water rethink its plan. Below are some boiler plate facts that provide a bit more detail</p> <p>Major concern 1 – Southern Water’s plan is taking us down the wrong path</p> <p>Point 1 - The path that Southern Water are taking is flawed</p> <p>In planning a £1.2 billion scheme to recycle treated waste water into Havant Thicket Reservoir, along with 3 other recycling schemes, Southern Water are taking us down the wrong path. We need a plan that focuses on developing more sustainable solutions first, that work with climate change to collect the forecast increase in winter rainfall and store it in new reservoirs and confined aquifers for use in dry summers. We get plenty of free rain but only collect 1% of rainfall in the UK. Collecting and storing more water in winter would also provide multiple benefits to society, helping to reduce the forecast increase in flooding, provide recreational sites for our communities, and provide biodiversity opportunities if we build more reservoirs.</p> <p>Major concern 2 – Southern Water need to be far more ambitious on leakage reduction</p> <p>Southern Water need to have a much more ambitious programme of action to reduce leakage, 3% of water Southern Water take from the environment is lost before it even reaches the treatment works, then a further 19% of water that customers have paid to treat is currently lost to leakage in the distribution network, that’s more than 100 million litres of precious water lost every day. Southern Water must be required to deliver a much faster programme of renewing water mains to replace their ageing pipe network, or they will never get leakage under control. Having a replacement rate of just 1 in 1000 years when a water main is only designed to last 120 years is just unacceptable.</p> <p>Major concern 3 – As Southern Water cannot be trusted to operate &amp; maintain its current traditional infrastructure without causing pollution, what hope is there of it safely operating the complex advanced effluent recycling treatment technology without incident?</p> <p>How can we trust Southern Water with the complex technology required to treat final sewage effluent, which has not been used for this purpose before in the UK?</p> <p>Southern Water have a very poor track record of treatment plant and pumping station failures, many prosecutions for pollution incidents and failure to take prompt action to rectify problems.</p> | <p>With regard to funding mechanisms, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities. Sea tankering from Norway is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Water recycling is widely used around the world to create a new source of</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>The risk of pollution to the Havant Thicket Reservoir as well as damage to Langstone Harbour and the Solent is unacceptable.</p> <p>Major concern 4 – Southern Water need to do more to protect the environment, and develop a strategy that helps them honour their commitment to be carbon neutral by 2030.</p> <p>Our river catchments could be protected much more quickly if they moved river abstractions closer to the tidal limit, and abstraction boreholes down the catchment, reducing the priority for abstraction reform which is driving the need for effluent recycling.</p> <p>Storage options need to be developed closer to where the water is needed, so that long pipelines that damage our countryside and wildlife are not required.</p> <p>Options need to be developed that do not have such a high carbon and emissions footprint. We need a strategy that prioritises low energy solutions, the energy alone for the Hampshire scheme will cost more than £3 million/year. With pumping and treatment needed 365 days a year, even though effluent recycling was selected as a drought resource.</p> <p>In a time of climate emergency how can Southern Water select the schemes with the highest carbon footprint and emissions? For example:</p> <ul style="list-style-type: none"> <li>– The Hampshire and Littlehampton effluent recycling schemes have the highest negative environmental impact score of any of the options considered.</li> <li>– The effluent recycling schemes to be developed by 2035 each have a higher carbon impact than the transfer of water from Norway by sea tankers.</li> </ul> <p>Major concern 5 – The risks from developing the effluent recycling plant on a landfill are unacceptably high</p> <p>If despite all of the concerns about whether effluent recycling is needed, the significant environmental impacts, and the enormous costs to build &amp; operate are to be ignored, Southern Water are to go ahead with their leaky plan, they must be told to find an alternative site for the recycling plant at Havant. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site into the chalk aquifer below adjacent to Langstone Harbour are just too great.</p> <p>We also need to press Defra to change the water industry funding mechanism to stop incentivising infrastructure heavy solutions, but instead encourage development of sustainable solutions that work with climate change.</p> <p>There has been inadequate publicity and consultation about Southern Water's plan.</p> <ul style="list-style-type: none"> <li>– Did you find out from Southern Water about the consultation?</li> <li>– Do you think they should have written to all Southern Water &amp; Portsmouth Customers across the region that will be impacted by this major change to their water supply?</li> </ul> <p>Research shows that customers prefer more natural &amp; sustainable solutions such as reservoirs and aquifer storage, but Southern Water have not listened</p> <p>If you don't support the Southern Water plan, then tell Defra to reject the plan and require Southern Water to develop a more sustainable plan that works with climate change &amp; which puts the environment before profit.</p> <p>The Hampshire effluent recycling scheme alone will deliver a profit of about £45 million pounds to Southern Water, this kind of profiteering paid for by customers is not acceptable.</p> | <p>supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |

|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>The huge cost of servicing the massive debt created by the selection of such expensive options will also have to be paid for by customers.</p> <p>We recognise that the level of detail contained within the 32 volumes of publicly available information provided by Southern Water is hard to digest without the significant investment in time which many readers are unable to spare.</p> <p>The action by Southern Water in unnecessarily withholding 12 volumes from public view does not help, as that is where the useful detail on options appraisal and environmental assessments is to be found.</p> <p>We hope that the summary lists of concerns we have provided will help you to digest what is being proposed and to consider whether there are better options for a more sustainable way forward.</p> | <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> |

| Reference | Feedback | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           |          | <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. | WRMP742   | <p>Southern water's record for clean water is atrocious. What is worse is the lack of investment while still doling out bonuses while our beautiful waterways, rivers and sea are polluted due to their incompetence. An incompetent group of people WHO MUST be held to account..for yrs and for future generations</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>As a major abstractor of water in the South East for public supply, and with responsibility for the conveyance of wastewater from homes and businesses for treatment before it is returned to rivers or sea, Southern Water plays a critical role in carrying out these duties whilst protecting and enhancing the environment. Further information and reports on how we achieve this can be found on our website <a href="https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/">https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/</a>. Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a></p> <p>We know our past performance was not good enough and we have apologised for that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP743   | <p>I am contacting you regarding the proposals outlined for the HAvant Thicket Reservoir and Buds Farm effluent recycling site.</p> <p>I believe the WRMP will cause environmental damage and cost an unacceptable amount, burdening the consumer with a massive debt now and for the future. The original proposals for Havant Thicket had many environmental advantages, but they have been lost with the [REDACTED] recycling proposal. I have listed some of my issues below, and local campaign groups have well researched arguments as to why DEFRA should reject these proposals.</p> <p>Further, Havant Borough Council do not support these plans, Southern Water have not been transparent in presenting the plans.</p> <p>I support the proposals of HBC in asking that DEFRA</p> <ol style="list-style-type: none"> <li>1. Scrutinise the population figures that are used for the business case</li> <li>2. Demand the leak fixing programme is accelerated and 80% are fixed by 2050.</li> <li>3. Add moving the abstractions on rivers to the tidal limits as an option so it can be assessed by the Environmental Agency now.</li> <li>4. Add the confined aquifers and reservoirs to this plan.</li> <li>5. Retain the threat of Hosepipe bans as a mechanism to educate and nudge consumers into reducing their water use.</li> <li>6. Use tiered, monthly water billing so the lowest consumers are rewarded and the most wasteful consumers pay for all consumers who use less than 100l/day.</li> </ol> <p>Some of my issues with the WRMP</p> <ul style="list-style-type: none"> <li>• Potential Environmental damage to Chalk Streams. Chalk streams are an endangered habitat and are already being damaged, so this further damage must be avoided and mixing large quantities of treated water into the water can damage a fragile ecosystem</li> <li>• Using a water recycling plant is not the best or most cost effective way to address the issues of lack of water. Fixing infrastructure and collecting rainwater would be more environmentally friendly and more cost effective.</li> <li>• It will require long pipe runs and cause damage to build</li> <li>• Southern water need to clean up their act and fix the existing infrastructure rather than spend over a billion pounds (a sum that no doubt will rise in the future) on a system thats not been used in the UK and is very costly to operate</li> <li>• There are enormous pollution risks involved in building/tunneling on landfill, and these risks could result in terrible damage to Langstone Harbour and the chalk streams</li> <li>• Southern Water do not appear to be listening to the concerns and objections of locals, and are not being open and transparent.</li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> |

|           | <ul style="list-style-type: none"> <li>As a customer I am fed up of the water companies sadeling us with debt and increasing prices to pay them off and not carrying out their responsibilities. This scheme looks designed to increase profits, rather than address the past failings</li> <li>The waste water reprocessing consumes a lot of energy, increasing carbon cost and alternative methods shoud be looked at</li> <li>the idea of tankering water from Norway in case of drought is not a realistic solution</li> <li>transferring water from Havant Thicket to [REDACTED] is not an environmentally sound way to address the issues</li> <li>more sustainable options have been suggested by campaign groups that can address the issues now and for the future, and these options need to be considered fully</li> </ul> <p>I urge you to prevent Southern Water from proceeding with their proposed WRMP and consider a less costly, more environmentally friendly approach that works with the climate we have and includes fixing the leaky infrastructure that exists (with 19% of water being lost). Please compel SW to rethink their plans</p> | <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We will continue to rely on Temporary Use Bans (TUBs) and Non-Essential Use Bans (NEUBs) as means to reduce demand during droughts.</p> <p>We plan to conduct tariff trials once our smart metering plan is implemented and we have a better understanding of the way demand varies daily and seasonally along with key household attributes (property type, household composition, socio-demographic variables etc). This will help us select a representative sample as well as an appropriate tariff model (rising block, reducing block, seasonal) to test.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>With regard to the viability of sea tankering, this option is no longer included in our plan.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. We consider all options, regardless of size, as part of</p> |

In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP744   | <p>This provides my comments on the Southern Water revised draft Water Resources management Plan and specifically the proposal to recycle effluent from the [REDACTED] Wastewater Treatment Works.</p> <p>Reading through the revised draft, and the original draft, I am surprised at how little discussion and/or evidence there is to support the Southern Water proposal to recycle sewage effluent into potable water by reverse osmosis. I am aware that reverse osmosis is commonly used to recycle industrial waste water into industrial process water, to reduce the level of total organic carbon in potable water to provide purified water for industrial manufacturing and to process non mains water supplies for private dwellings but it is very hard to find much in the way of examples where reverse osmosis has been used to recycle sewage effluent into potable water.</p> <p>In these circumstances I would expect to find detailed reports describing how Southern Water validate the proposed recycling process covering at minimum an international review of use of the technology in other areas of the world, detailed discussions of the pros/cons of the technology when applied to this particular application (i.e not discussions of use in industrial processes with no critical health application) and how Southern Water intends to address these, details of the proposed design of the plant and, most importantly, detailed reports of experimental work done - using [REDACTED] effluent - to arrive at a plant design, to clearly show what quality of water will be delivered, together with full details of all pilot plant and scale up work to support process selection and design. I would also expect to see discussions of what quality control measures will be in place and, given that process failures could have critical health implications, a full analysis of risk and proposed mitigation.</p> <p>If Southern Water was a company with an exemplary reputation in terms of environmental protection and investment in improving waste water treatment it could be appropriate to assume that these concerns will be addressed at some later point. However the Southern Water record is hardly exemplary and they should not be granted permission to proceed with such a safety critical proposal.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> |
| WRMP745   | <p>I am writing to express my deep concern and reservation regarding the plans Southern Water has proposed to develop a waste recycling centre in Langstone. In short my three main concerns are cost, lack of public engagement and safety.</p> <p>Cost Concerns</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>Costs for this scheme are escalating quickly. In June 2023, the estimated cost was between £550 million and £900 million. By June 2024, this had increased to a minimum of £1.2 billion, with the potential to rise to £1.4 billion if Southern Water has to build its own pipeline to the Havant Thicket Reservoir. These rapid cost increases are a concern, especially since the technology for effluent recycling has never been used in the UK before, and its long-term costs are uncertain.</p> <p>For the same £1.2 billion, three new reservoirs the size of Havant Thicket could be built. The current estimated cost for constructing the Havant Thicket Reservoir alone is £350 million. It's crucial to recognize that investments in effluent recycling lose value over time. The mechanical and electrical infrastructure would need to be upgraded or replaced every 10 to 20 years, with the entire system likely nearing the end of its useful life in 60 years. In contrast, sustainable reservoir solutions designed to capture increased winter rainfall will continue to provide benefits for up to 200 years, offering far better long-term value, environmental benefits, and the potential to help mitigate winter flooding.</p> <p>The annual energy cost for treating final effluent from [REDACTED] Sewage Works to drinking water standards is conservatively estimated at £2.6 million. This estimate is based on energy consumption and cost data for Southern Water's Havant &amp; [REDACTED] treatment plants. Additional costs will arise from treatment chemicals, staff, maintenance, and the frequent replacement of Reverse Osmosis membranes every 5 to 7 years. Furthermore, these energy costs do not include the significant pumping expenses required to transport the treated effluent from [REDACTED] to the Broadmarsh Water Recycling Plant, from there to the reservoir, and then over 40 km to the [REDACTED] water treatment works.</p> <p>When all these additional energy costs are factored in, the total expenditure could easily exceed £3 million in a normal year (without a drought). This makes it difficult to see how effluent recycling can be considered the 'best value' solution for either customers or the environment, given the substantial annual carbon impact.</p> <p>The additional cost to Southern Water customers is estimated at around £2.50 per month over 20 years, equating to £30 per year per household just for the Havant effluent recycling scheme. This will be followed by further price increases to cover the costs of tackling sewage discharges, fixing supply leaks, and replacing the outdated Victorian sewage infrastructure.</p> <p>Moreover, the value of investments in effluent recycling diminishes quickly, as the electrical and mechanical systems require frequent upgrades and replacements every 10 to 20 years, with the infrastructure likely obsolete within 60 years. On the other hand, a winter water storage solution, such as a reservoir, is a long-term, sustainable option that would continue to provide value for up to 200 years, offering better returns on investment and additional environmental benefits, including the potential to reduce winter flooding risks.</p> <p>Pursuing effluent recycling represents a short-sighted approach to water resource management. Customers will continue to pay for these costly recycling schemes long after they become obsolete, as the Ofwat funding mechanism ensures repayment. Given the limited lifespan of these plants, and the enormous upfront cost—at least £1.2 billion for the Hampshire effluent recycling and transfer scheme—it is hard to justify such an expensive solution that leaves no lasting legacy for the future. Customers will be burdened with this enormous debt well into the future, making it an unsustainable and impractical choice.</p> <p>Lack of public engagement and the engagement there has been has not been positive</p> | <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions. In AMP8 we are investing £90m on natural solutions, including habitat and biodiversity improvements, reduced risk of spread of invasive non-native species, in river enhancements, catchment management with the agricultural sector and Catchment Partnerships, chalk stream enhancement and SSSI management. This is a long term programme that started in AMP6, and natural solutions are embedded in our long term delivery plans.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. We are planning to build new reservoirs where feasible.</p> <p>With regard to the suggestion that three reservoirs could be built for the cost of the WRP at Site 72, no detail is provided on proposed locations, capacities and volumes that could be reliably obtained. Therefore, we are unable to comment on the relative merits of HWTWRP compared to these schemes.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We have dedicated budget for both proactive and reactive</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>The current approach is not supported by customers. In fact, 48% of respondents to the 2022 Consultation opposed effluent recycling, yet Southern Water has proceeded with the project despite this clear feedback. Customer research conducted by both the company and Water Resources South East consistently shows a preference for more natural solutions, such as catchment management, aquifer storage, and winter storage reservoirs. For instance, Southern Water has identified the River Adur off-line reservoir as a potential scheme for 2045, but there are likely other viable options, such as the River Wallington and River Hamble, that have not been considered. In fact, for the same cost as the proposed effluent recycling scheme, it would be possible to build three winter storage reservoirs, offering a more sustainable and customer-approved alternative.</p> <p>When Southern Water shifted their plan from desalination to effluent recycling, they failed to conduct a thorough review of all alternative options, nor did they carry out a full statutory consultation as required. Despite this, they have proceeded with their plan without fully engaging customers or exploring other potential solutions.</p> <p>In previous consultations, posters were not displayed at locations where the infrastructure will be sited, limiting public awareness. Furthermore, there has been no direct mailing of customers or information included with their water bills to ensure they are informed. Southern Water has confirmed that they have no plans to notify all customers about their plans or upcoming consultations. This is concerning, especially when case studies from drought-stricken countries highlight the importance of customer engagement in securing public support for large-scale water projects.</p> <p>Instead of pumping treated effluent more than 40 km to a distant reservoir, why not explore the possibility of recycling sewage closer to areas where the water is actually needed, such as near Southampton? This would not only reduce the environmental impact of long-distance pumping but could also offer a more efficient and environmentally friendly solution—if effluent recycling is to be pursued at all.</p> <p>Moreover, the significant investment in effluent recycling becomes redundant once the plant reaches the end of its life in approximately 60 years. The electrical and mechanical infrastructure will require upgrades or replacement every 10 to 20 years. By contrast, a winter water storage solution, like a reservoir, works with the natural cycles of climate change and will still be operational for up to 200 years, offering better long-term value for money. It also provides greater environmental benefits, such as helping to mitigate winter flooding risks, while ensuring a more sustainable and lasting solution for the future.</p> <p><b>Safety Concerns</b></p> <p>Southern Water loses a staggering 100 million litres of water every day to leaks, which represents 19% of all the water they abstract from the environment—water that customers are paying to treat, but is wasted due to leakage in their distribution system. Despite this, their current programme for addressing leaks is painfully slow. As a result, even by 2050, Southern Water is projected to still be losing around 10% of all the water they treat, including the new water generated at great cost through their planned effluent recycling schemes. Without a much more ambitious programme to replace ageing water mains, Southern Water will never get a handle on leakage and will continue to waste precious resources at an unacceptable scale.</p> <p>Would you trust this company to process recycled water to provide fresh drinking water when it can't even manage to handle waste water cleaning appropriately?</p> | <p>maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) on in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>With regard to possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP746   | <p>I am writing to say how appalled I am that Southern Water's plan to recycle effluent is being considered.</p> <p>In this area our water supply is from chalk aquifers and it seems unnecessary to pollute this with recycled effluent. I accept that our chalk streams are under threat by over abstraction and there may be a shortage for some areas.</p> <p>However, I don't believe that the recycling of sewage effluent is the answer.</p> <p>More needs to be done to reduce leaks so that the huge amount of treated water is not lost in the distribution system.</p> <p>This country has plenty of rain and we should be building reservoirs to collect and store this precious resource. Not only could this result in less flooding but reservoirs provide a great resource for nature and also areas for recreation. Reservoirs last much longer than S Water's planned scheme and would be much cheaper overall.</p> <p>S Water's scheme has a high environmental impact , high carbon footprint and high emissions which is not what this country should be embarking on in view of the climate crisis that we are all threatened by.</p> <p>It is madness to be transporting the treated effluent miles across the region with the incredible costs in money and energy plus the damage to the environment to get it from Havant to the areas that require the water. If this awful idea has to go ahead then the treatment and storage should be closer to the areas of need.</p> <p>Again it is madness to be considering siting the recycling plant on an old landfill site. Digging into it with all the tunnels for pipework etc will risk who knows what contamination entering both Langstone and Chichester Harbours, the land around and the water supply. There is a high risk of "Forever Chemicals" being released with unacceptable consequences.</p> <p>Southern Water and Portsmouth Water have not publicised this proposal, details should have been sent to all customers so that we can have a say in it. If it wasn't for the Residents Association and Hayling Sewage Watch I wouldn't know about it and have a chance to express my opinions.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> |

|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>I am aware that others I have spoken to knew nothing about it. How can that be a reasonable "Consultation"?</p> <p>I can only hope that common sense will prevail and this scheme will be rejected.</p> | <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>With regard to siting, multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which, went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| WRMP747   | <p>I am writing to say how appalled I am that Southern Water's plan to recycle effluent is being considered.</p> <p>In this area our water supply is from chalk aquifers and it seems unnecessary to pollute this with recycled effluent. I accept that our chalk streams are under threat by over abstraction and there may be a shortage for some areas.</p> <p>However, I don't believe that the recycling of sewage effluent is the answer.</p> <p>More needs to be done to reduce leaks so that the huge amount of treated water is not lost in the distribution system.</p> <p>This country has plenty of rain and we should be building reservoirs to collect and store this precious resource. Not only could this result in less flooding but reservoirs provide a great resource for nature and also areas for recreation. Reservoirs last much longer than S Water's planned scheme and would be much cheaper overall.</p> <p>S Water's scheme has a high environmental impact , high carbon footprint and high emissions which is not what this country should be embarking on in view of the climate crisis that we are all threatened by.</p> <p>It is madness to be transporting the treated effluent miles across the region with the incredible costs in money and energy plus the damage to the environment to get it from Havant to the areas that require the water. If this awful idea has to go ahead then the treatment and storage should be closer to the areas of need.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> |

|           | <p>Again it is madness to be considering siting the recycling plant on an old landfill site. Digging into it with all the tunnels for pipework etc will risk who knows what contamination entering both Langstone and Chichester Harbours, the land around and the water supply. There is a high risk of "Forever Chemicals" being released with unacceptable consequences.</p> <p>Southern Water and Portsmouth Water have not publicised this proposal, details should have been sent to all customers so that we can have a say in it. If it wasn't for the Residents Association and Hayling Sewage Watch I wouldn't know about it and have a chance to express my opinions.</p> <p>I am aware that others I have spoken to knew nothing about it. How can that be a reasonable "Consultation"?</p> <p>I can only hope that common sense will prevail and this scheme will be rejected.</p> | <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |

| WRMP748   | <p>Southern Water – Havant Thicket Reservoir</p> <p>If I recall correctly the planning permission for the Havant Thicket reservoir, was for the collection of rain water and that excess water would be abstracted from local streams and redirected to the reservoir.</p> <p>Recycled water / leak prevention<br/>I have concerns about the proposal to use recycled water to top up the supply. Surely, with the amount of rainfall there are creative ways to collect and use it. If the figures regarding wastage from leaks are accurate, an ambitious planned investment in the pipe infrastructure to renew the system would be cost effective. Perhaps Building regulations should be reviewed so water from roofs is collected separately from domestic/commercial waste water.</p> <p>Pollution<br/>With regard to siting the treatment plant at [REDACTED] and utilising the area formerly a tip raises huge concern. That land is far from stable and construction would inevitably disturb chemicals and other matter that is best left alone. Langstone harbour already suffers from pollution from 'legal' sewage discharges. The aim must be to reduce the pollution, not potentially increase the likelihood of contamination.</p> <p>Energy / environmental efficiency<br/>This proposed scheme, pumping waste water across Hampshire to [REDACTED], cannot be energy efficient, assuming it has to run continuously. Local lower cost solutions would be preferable, especially when there are ways to transfer water within the Hampshire Grid system. Is this a case of attracting funding to large capital projects, when smaller environmentally sensitive schemes would not be funded?</p> <p>Yours faithfully,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction</p> |

These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter. Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WRMP749   | <p>I am writing to set out my objections to Southern Water's draft Water Resources Proposals and in particular the proposed production of drinking water by treating effluent and especially the scheme to do so with a plant at Havant Thicket Reservoir.</p> <p>A very significant alteration is being proposed to customers' water supply with the source changing from river, spring or groundwater to recycled effluent.</p> <p>1. Economic Considerations: The cost of implementing and maintaining the effluent recycling scheme is substantial. It is essential to consider whether the financial resources could be better allocated to more sustainable and publicly acceptable solutions.</p> <p>a. The estimated cost for the effluent recycling scheme at Havant Thicket Reservoir is now £1.2 billion to £1.4 billion. Costs for this scheme are rising rapidly. The estimated cost in June 2023 was £550-900 million. My concern is that the costs will continue to spiral, one reason being the technology used for effluent recycling has not previously been used in the UK.</p> <p>b. If the current costs of the effluent recycling scheme at Havant Thicket Reservoir had been known in 2021/22, would the scheme have been selected as best value? Considering the current minimum £1.2 billion cost, regulators need to examine the proposed costs carefully.</p> <p>c. It would be considerably cheaper to build new reservoirs to collect and store rainwater. The option of doing so has not been explored sufficiently. Reservoirs are semi-permanent assets whereas the effluent recycling plant will have a relatively short life in comparison and is much less environmentally sustainable. It is estimated the Havant Thicket Reservoir will cost £350 million to construct. At this level, three such reservoirs could be built for the same cost as the £1.2 billion effluent recycling plant.</p> <p>d. Similarly, opportunities to use aquifers to store excess winter rainfall have not been sufficiently considered. The investigation of other aquifer storage schemes in Hampshire, the IOW and West Sussex is not being prioritised to establish the yield they could provide. It is essential the investigation of such schemes be prioritised and funded urgently so that these schemes can be included as feasible options. Around the world, aquifer storage has been successfully used for many years, including in California and in the UK, in the Thames Basin. Tests in Dorset have previously shown that aquifer storage and recovery is feasible in confined sections of the chalk.</p> <p>e. Bizarrely, the Hampshire effluent recycling/ transfer scheme is almost as expensive to operate per megalitre as shipping water in from Norway by tanker. This cost is confirmed in the 'restricted documents'.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>A Water Recycling Plant would be typically expected to last 60 plus years but have a number of upgrades every 10-20 years of the electrical and mechanical plant.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>f. The long-term viability of the effluent recycling scheme is questionable. It is crucial to ensure that any measures taken are not only effective in the short term but also sustainable and beneficial in the long run.</p> <p>2. Public Acceptance of Drinking Recycled Wastewater<br/>The public perception and acceptance of drinking recycled wastewater is a major hurdle and faces significant public resistance. Despite advanced treatment processes, many people may find the idea unpalatable, leading to a lack of trust in the safety and quality of the water. This could result in decreased water consumption and increased reliance on bottled water, which would counteract the environmental benefits of the proposal. This could result in more environmentally damaging plastic pollution, creating a plastic bottle mountain, especially as mixed reservoir water will taste different to spring water.</p> <p>3. Health and Safety Risks:<br/>Although modern treatment technologies are highly effective, they are not infallible. The presence of emerging contaminants, such as pharmaceuticals and personal care products, poses a risk that current treatment methods may not fully mitigate. Ensuring the long-term safety of recycled water requires continuous monitoring and advancements in treatment technology, which could be costly and resource-intensive.</p> <p>4. Environmental Impact: The environmental impact of the treatment process itself is a concern:</p> <p>a. Energy security is already a significant concern. Developing energy intensive solutions to water procurement makes things worse for energy security and the planet.</p> <p>b. Advanced treatment processes require significant energy and chemical inputs, which could offset the environmental benefits of recycling wastewater.</p> <p>c. The overall carbon footprint and sustainability of the proposed system needs more thorough evaluation.</p> <p>d. Developing the effluent recycling plant and the deep tunnel shafts that are needed on the contaminated landfill site at Broadmarsh poses a significant environmental risk to Langstone Harbour.</p> <p>e. In view of Southern Water's poor track record of treatment plant and pumping station failures, number of prosecutions for pollution incidents and its failure to take prompt action to rectify such problems, Southern Water cannot be trusted to operate and maintain this complex advanced treatment process</p> <p>Planning Process: These effluent recycling plants should not be regarded as 'Nationally Significant Infrastructure Projects' and thereby bypass Local Planning Authority processes, particularly the [REDACTED] plant in Havant. [REDACTED] is a local matter, not a national issue.</p> | <p>concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk</p> |

|           | <p>The previous Southern Water draft Water Resource Management Plan in 2023 was rejected following public objections and concerns expressed by regulators. It is very disappointing that Southern Water has not taken the opportunity to start again, undertake a more realistic review of the forecast water resources position and a more robust evaluation of potential solutions to bring forward a more sustainable plan.</p> <p>Southern Water have put all of its 'eggs in one basket'. It would be better, more resilient and more sustainable to develop multiple smaller schemes, close to where water is needed, many of which do not even require new consents, just treatment plant or borehole upgrades.</p> <p>Please reject the current draft plan and require Southern Water to develop a plan that puts the environment before profit.</p> | <p>consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP750   | I'm against the use of recycled wastewater by Southern water                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for reviewing our rdWRMP24 and providing feedback. Your objection to the use of recycled water in Havant Thicket has been noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP751   | <p>I think that these plans for effluent recycling are going in the wrong direction. Climate change is an evident threat, and so we need to look for solutions that are sustainable in terms of energy use. The proposed solutions require huge amounts of energy and will produce much more carbon emissions than other ways of conserving water.</p> <p>We need to focus on stopping the 19% of water that is lost to leaks after treatment, and the extra 3% that is lost earlier. Southern water needs a much faster programme of renewing water mains and pipes.</p>                                                                                                                                                                                                                                                                                    | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. Climate change and environmental sustainability are key factors considered during this process. This will continue to be the case for WRMP29. The scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

---------------------------------------------------------------------------------------------|
|           | <p>Another focus should be the collection and storage of rainwater in winter. Nowadays , only 1% is collected. New reservoirs and storage facilities need to be built, which could also reduce the risk of flooding , increase opportunities for biodiversity, and provide places for recreation. Southern Water does not have a good track record in regard to pollution caused by failures in its pumping stations, and lack of action to rectify faults. If they can't get the present problems under control, how can they be trusted to be able to prevent any pollution of the Havant Thicket reservoir, Langston harbour and the whole of the Solent.</p> <p>There are many things that S Water could do to protect the environment. They could move river and borehole abstractions closer to the tidal limit, which would protect river catchments. They could develop storage options nearer to where the water is needed, avoiding long and damaging pipelines. One wonders why S W are choosing schemes that cost such a lot in energy, eg £3 million a year for the Hampshire recycling scheme.</p> <p>It would be cheaper in carbon impact terms, to transport water by tanker from Norway.</p> <p>The whole scheme seems to be designed to make profits for SW through infrastructure. Instead , they need to look for sustainable solutions that work with climate change, instead of against it. If the water industry funding mechanism incentivises large infrastructure projects, then it needs to change to encourage solutions such as aquifer storage and reservoirs. Public opinion is in favour of these types of solutions and against large disruptive pipelines, huge recycling plants that risk leaching effluent to Langstone harbour.</p> <p>I urge DEFRA to reject totally these plans and to insist that all the solutions of water storage, and conservation are used first.</p> | <p>Water recycling and desalination invariably uses more energy than conventional supply sources such as groundwater or rivers, due to the advanced treatment techniques used. However, these conventional sources are no longer available to us as they once were.</p> <p>Through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>As to your point on reservoir storage, they require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding aquifer storage, a Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The wastewater recycling plant will monitor the quality of treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of treatable parameters. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Ofwat regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results, and it cannot be demonstrated that the preferred plan is either least cost or best value.</p> |
| WRMP752   | <p>I'm very concerned about Southern Water's plans for effluent recycling. Their plans are heavy in energy use, wasteful in terms of resources, very damaging to the environment in the construction of very long pipelines , and carrying the extensive risk of pollution from the effluent, its processing and the residual product.</p> <p>In a period when climate change is an evident threat, we need to look for solutions that are sustainable in terms of energy use. The proposed solutions require huge amounts of energy and will produce much more carbon emissions than other ways of conserving water.</p> <p>We need to focus on stopping the 19% of water that is lost to leaks after treatment, and the extra 3% that is lost earlier. Southern water needs a much faster programme of renewing water mains and pipes.</p> <p>Another focus should be the collection and storage of rainwater in winter. Nowadays , only 1% is collected. New reservoirs and storage facilities need to be built, which could also reduce the risk of flooding , increase opportunities for biodiversity, and provide places for recreation. Southern Water does not have a good track record in regard to pollution caused by failures in its pumping stations, and lack of action to rectify faults. If they can't get the present problems under control, how can they be trusted to be able to prevent any pollution of the Havant Thicket reservoir, Langstone harbour and the whole of the Solent.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>There are many things that S Water could do to protect the environment. They could move river and borehole abstractions closer to the tidal limit, which would protect river catchments. They could develop storage options nearer to where the water is needed, avoiding long and damaging pipelines. One wonders why S W are choosing schemes that cost such a lot in energy, eg £3 million a year for the Hampshire recycling scheme.</p> <p>It would be cheaper in carbon impact terms, to transport water by tanker from Norway.</p> <p>The whole scheme seems to be designed to make profits for SW through infrastructure. Instead , they need to look for sustainable solutions that work with climate change, instead of against it. If the water industry funding mechanism incentivises large infrastructure projects, then it needs to change to encourage solutions such as aquifer storage and reservoirs. Public opinion is in favour of these types of solutions and against large disruptive pipelines, huge recycling plants that risk leaching effluent to Langstone harbour.</p> <p>I urge DEFRA to reject totally these plans and to insist that all the solutions of water storage, and conservation are used first.</p> <p>I've seen very little publicity about these damaging plans. Surely such major infrastructure projects should be much better publicised. People need to know what their water companies have in mind , especially those with such poor environmental records as Southern Water.</p> | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs. However, we know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">customers</a>: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted</p> |

Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> |
| WRMP753   | <p>Southern Water revised draft Water Resources Management Plan</p> <p>There is no justification in destroying acres of Oxfordshire farmland and flood plain, increasing risk of flooding to homes and lives to increase the size of sesro to provide the Southern to Thames transfer!</p> <p>I am strongly against the Thames to Southern Transfer in this plan:</p> <p>A. The lack of wisdom of transferring water out of a water stretched Thames Valley area B. Exorbitant cost to customer for minimal benefit. (capital cost £1.6billion)</p> <p>Further, the cost of sesro is grossly underestimated (see Prof Binnie, former government UK reservoir advisor warnings that sesro costs will soar by as much as 100%). Where is an accurate and transparent cost benefit analysis?</p> <p>C Environmental destruction in Oxfordshire for minimal benefit in Hampshire streams.</p> <p>Firstly, Thames Water have failed to show the cost to the environment in Oxfordshire. For example, they list one ancient tree when campaigners have had over 200 ancient and veteran irreplaceable trees verified with the Woodland Trust. The cost to the environment in Oxfordshire has been grossly undervalued. Increasing the size of sesro from 100mm3 to 150mm3 to accommodate the t2st increases the damage for minimal benefit in Hampshire. Secondly, Southern Water have been shown to say the risks of having occasional drought orders instead are minimal. Don't destroy acres of oxford countryside for negligible benefit elsewhere.</p> <p>The water companies are profiteering at the expense of Oxfordshire countryside and residents.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>As part of public consultation on SESRO in summer 2024, a number of documents were issued and clearly mentioned the planned capacity for the reservoir (150 million cubic meters). The documents are available on the Thames Water website. See, for example, <a href="https://dn9cxogfaqr3n.cloudfront.net/2024/13491+-+TW+SESRO+Summary+brochure_A4_WEB.pdf">https://dn9cxogfaqr3n.cloudfront.net/2024/13491+-+TW+SESRO+Summary+brochure_A4_WEB.pdf</a> and <a href="https://dn9cxogfaqr3n.cloudfront.net/2024/Option+Appraisal+Context+and+Methodology+Report.pdf">https://dn9cxogfaqr3n.cloudfront.net/2024/Option+Appraisal+Context+and+Methodology+Report.pdf</a></p> <p>The Environment Agency's (EA) National Framework (Meeting our Future Water Needs: A National Framework for Water Resources) explores England's strategic long-term water needs across all key sectors up to and beyond 2050, emphasising that if action is not taken many areas of England will face water shortages.</p> <p>T2ST is considered to be in accordance with the National Framework and Regional Plan requirements, in that T2ST forms part of a portfolio of supply side strategic options identified as being required in the WRSE draft Regional Plan. The National Framework supports this approach, recognising that substantial new supply infrastructure will be required.</p>                                                                                                                  |

|           | <p>D. Increasing sesro size to accommodate this also grossly increases the flood risk and safety risks to local residents. Without a consultation on the increased size, without a Dam break analysis, these risks have not been taken into consideration at all which is astounding! The risk of dam failure is low but the consequences are deadly! Increasing the sesro size multiplies this risk massively for my home, my family. My family home I, and those in it, would now be unlikely to survive a catastrophic failure. Low risk of it happening maybe but too poorly justified to be acceptable. Where is the comparison to the use of desalination, drought orders, Severn Transfer?</p>                         | <p>At this stage, the environmental assessments for T2ST are high level, considering all the various options. At the point when the project progresses to the stage where planning consents are required, the chosen option will need to be fully appraised, and in most cases an environmental statement will be produced. Where required that statement sets out the likely environmental impacts and what mitigation is required.</p> <p>Community and stakeholder engagement is crucial to the development of the Strategic Resource Options (SROs), including T2ST. Before applying for permission, both ourselves and Thames Water will need to demonstrate that we have presented information about the proposals to the community, gathered feedback and considered the views of stakeholders.</p> <p>Since the SROs are at a very early stage of development, consideration should be given to that when reviewing the proposals. They are for the purposes of allocating further funding not seeking permission at this stage.</p> <p>The Natural Capital Assessment (NCA) for the T2ST project identified that the preferred options will likely cause the temporary and permanent loss of natural capital stocks during construction. Stocks that are likely to be permanently lost include arable land, pasture, other semi-natural grassland and active floodplain. However, best practice mitigation (such as pipejack or micro tunnel crossings) and reinstatement/ compensation of habitat means that most natural capital stocks post-construction will have no to little change.</p> <p>The NCA has identified that pipeline routes through the route corridors exist that avoid the majority of impacts on ancient woodland. These findings are expected to inform future design development.</p> <p>Further information including the environmental assessments for T2ST can be found here <a href="https://www.thameswater.co.uk/about-us/regulation/strategic-water-resource-solutions/water-transfer-from-thames-water-to-southern-water">https://www.thameswater.co.uk/about-us/regulation/strategic-water-resource-solutions/water-transfer-from-thames-water-to-southern-water</a></p> |
| WRMP754   | <p>Having been alerted to Southern Water's plan by the Green Party as there were no public consultation announcements, we are writing to register our concerns as local residents at the proposals to reprocess recycled sewage effluent through the proposed Havant Thicket Reservoir for us to consume as local residents. There is no shortage of rainfall in this area-why not improve capture and storage of fresh rainwater? As we shall be paying for this £1.2 billion scheme for years to come in our bills we object to the furtive way this proposal is being presented and to the potential £45 million profit to Southern Water's shareholders. Please rethink this proposal now and change your priorities.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           |          | <p>Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We are planning to build new reservoirs where feasible to capture rainfall. This includes the Havant Thicket Reservoir, the South East Strategic Reservoir Option (SESRO) and the River Adur Offline Storage. However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> <p>We will continue to explore options for additional reservoirs across our supply area for our next plan. The National Framework, Water Resource Planning Guideline and other supplemental policies all recognise the need for water resource plans to not only secure a water supply but to also add to wider environmental and societal benefit.</p> <p>Our Water Resource Management Plan not only has to look at our water needs for the next 5 years, but needs to look ahead as far as 2075. This means we need to understand changes to our water supply needs and impacts from climate change and population growth. In addition, all water company Water Resource Management Plans now need to leave more water in the environment for the benefit of our plants and wildlife. Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see:</p> <p><a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a></p> <p>This means that water companies now need to look at water supply and storage options that have not been traditionally used, such as water recycling and desalination. We understand that some customers may not agree with some of the proposed schemes in our plan, but the challenges we face finding a sustainable water supply into the future means we need to look at all viable schemes and will have to make decisions with the support of our national Government and industry regulators which benefits all society. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8. Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. We know our past performance was not good enough and we have apologised for that.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| WRMP755   | <p>"This is my personal appeal to DEFRA to REJECT Southern Water's WRMP. I urge DEFRA to mandate the development of a truly sustainable plan. One that addresses climate change and prioritises environmental protection, rather than pushing for the environmentally harmful and short-sighted option of sewage effluent recycling. Here is my reasoning...</p> <p>Southern Water's clearly plans prioritise their profits over environmental impact. It is evident that alternative, much more environmentally sustainable solutions for securing additional water have been sidelined or delayed to ensure that recycling sewage effluent becomes the favoured option. This approach is driven by the substantial profits, estimated at £45M that Southern Water stands to gain from effluent recycling, far exceeding the financial returns from other methods. Ultimately, it is customers who will bear the cost, paying for the excessive debt incurred by this expensive and environmentally questionable choice. This profiteering at the expense of bill payers is unacceptable, especially when more affordable, viable options exist.</p> <p>Southern Water's recent credit rating downgrade to ""Junk"" status by Moody's demands immediate reconsideration of their strategy. With credit now much more expensive, they must rethink prioritising costly options such as effluent recycling, as this financial shift will significantly increase their expenses beyond what was originally planned.</p> <p>DEFRA needs to change funding mechanisms which clearly incentivise building heavy infrastructure projects instead of encouraging development of more sustainable, environmentally friendly solutions</p> <p>Southern Water operates over an area of 10,500 square kilometers with c.800mm of annual rainfall amounting to 8.4 TRILLION litres each year. Combined with Portsmouth Water, they</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Regarding the suggestion that three reservoirs could be built for the cost of the water recycling plant, no detail is provided on proposed locations, capacities and volumes that could be reliably obtained. Therefore, we are unable to comment on the relative merits of HWTWRP compared to these schemes.</p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           | <p>supply only 242 billion litres annually (before 20% leakage), capturing just 2.8% of the rainfall. This represents a huge missed opportunity to harness a cheap, environmentally friendly resource. Meanwhile, Southern Water loses 100 million litres of potable water daily, and Portsmouth Water loses 23.6 million litres, totaling 123.6 million litres daily - that's enough water to supply around ONE MILLION customers. Customers are paying for water that's being lost to leaks, a significant inefficiency that must be addressed with more ambition.</p> <p>Southern Water, because it suits them to do so, is looking mostly to the long term; It should, in my opinion, be looking at a programme of progressive (phased) delivery. It should start with short and medium term easy sustainable wins and look at ALL options originally on the table and start again. Southern Water does not need to develop a 1 in 500 year drought solution today. Their approach is actually making their job much harder than it needs to be.</p> <p>Concern 1: Southern Water's plan is taking the wrong approach.</p> <p>Every year, 8.4 TRILLION litres of water fall on the areas served by Southern Water and Portsmouth Water supply. Yet, these companies treat and supply just 242 billion litres annually, using only 2.8% of available rainfall. This vast, sustainable resource could easily be harnessed through reservoir projects, a proven, cost-effective, and environmentally neutral solution. Reservoirs offer far more than just water supply; they help reduce flooding, provide recreational spaces, boost biodiversity, and act as buffers against the significant and worsening impact of climate change.</p> <p>Southern Water's £1.2+ billion scheme to recycle treated wastewater into Havant Thicket Reservoir, along with three other effluent recycling projects, is totally unsustainable. The water shortfall could easily be fully addressed by investing in reservoirs and alternative storage solutions. For the same £1.2 billion, three new winter storage reservoirs could be built. Yet, these greener options are not being sufficiently explored, they have been sidelined and DEFRA needs to recognise this.</p> <p>Southern Water appears to mislead the public by referencing eight global regions using effluent recycling for drinking water. In truth, only five of these employ the Reverse Osmosis process proposed for Havant, and just one of those discharges treated water into a reservoir—a truly flimsy and misleading precedent for their plans. Most schemes use underground aquifers with long retention times, a far less disruptive and more proven approach. Most of the recycled water in these eight areas is not used for human consumption it is used for municipal, industrial and farming purposes adding further to the deception</p> <p>If effluent recycling is deemed necessary for Hampshire, why insist on discharging it into the pristine chalk-fed Havant Thicket reservoir? Why not redirect it into a suitable aquifer closer to the area(s) requiring water? This would address many concerns about the environmental and ecological impact on Havant Thicket. Southern Water has already admitted they have not fully investigated or modelled the implications of their chosen approach, raising serious questions about their decision-making process.</p> | <p>Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>The Littlehampton recycling option is a WRMP19 deliverable. It is preselected in the plan consistent with WRPG. The Hampshire Water Transfer and Water Recycling Project is selected before there are no equivalent alternatives with better environmental scores.</p> <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           | <p>Southern Water has admitted that its effluent recycling at Sandown fails to comply with the Water Framework Directive. This critical information only came to light through extraordinary efforts by citizens to access restricted documents - documents Southern Water actively sought to keep hidden from public scrutiny by making it very difficult for its 4+ million customers to see.</p> <p>Concern 2: Southern Water's Lack Ambition on Leakage Reduction.</p> <p>Given that Southern Water losses in excess of 100 MILLION litres of treated water through its leaking network every single day, enough to supply close to 1 MILLION customers. Repairing these leaks would negate the need to find water from elsewhere. Southern Water says it will reduce network leaks by 53% by 2050 - this simply lacks any sustainable ambition and will result in Southern Water still losing 50 MILLION litres per day every day, enough to supply 450,000 customers.</p> <p>Southern Water's stated plan to replace its network of leaking pipes at a rate that would never actually get leakage under control! A replacement rate of 1 in 1000 years is frankly ridiculous when water main design life is around 120 years. DEFRA needs to recognise this and demand more appropriate measures</p> <p>Southern Water has known about its leaks, around 20%, for years and has done very little to address it - it's time for the regulator to step in and stop these unsustainable losses which from a customer perspective looks absurd. Why would Southern Water spend £1.2Bn on recycling our sewage when £1.2Bn would fix the leaks and generate twice the water supply!?</p> <p>Industry experts say that if Southern Water properly prioritised and funded leakage reduction they could strive to achieve a 50% reduction by 2040 and a 70% reduction by 2050, rather than the unimpressive, low ambition 53% leakage reduction target they have set themselves by 2050.</p> <p>It is both reprehensible and absurd that Southern Water plans to spend vast sums creating water from sewage effluent whilst abjectly failing to address the huge losses from its network. Their plans to cut leakage by just 53% by 2050 simply lack credible ambition when the rewards of recovering water for a million customers are firmly on the table</p> <p>Concern 3: Southern Water cannot be trusted to operate complex infrastructure without failure.</p> <p>Southern Water has a well-earned reputation for operational failures, which has severely damaged trust in the company. Recent instances of operational failures by Southern Water to operate crucial and complex systems reliably are well documented in the public domain... There is a history of recent treatment plant failures at [REDACTED] (Hampshire) and [REDACTED] (West Sussex). Failures appear to be mostly caused by HUMAN ERROR</p> <p>Nov '2024: Southern Water's highly complex</p> | <p>million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water. All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |

|           | <p>Southern Water's new flagship complex stormwater CSO pollution warning system was not working for 4 days without Southern Water even recognising the complete failure to update because of negligent monitoring. The failure was caused by HUMAN ERROR</p> <p>Feb 2024: Southern Water was fined for negligently allowing a raw sewage spill lasting up to 20 hours that killed thousands of fish. It was members of the public reporting pollution to the Environment Agency NOT Southern Water's monitoring equipment that detected the spill. The failure was caused by HUMAN ERROR failing to program pumping apparatus competently</p> <p>A cursory look at regional news shows that Southern Water has been slow to act or even foresee natural contamination of river and groundwater supply leading to system failure. Increased turbidity in sewage treatment works will inevitably, according to experts, cause significant filtration issues for recycling effluent. Notwithstanding Southern Water is highly regulated, despite regulation it cannot provide a robust service to treat our wastewater without breaching its permits, something it has been subjected to record fines.</p> <p>Even a Southern Water state of the art new Sewage Treatment Works suffered technical failure causing unpermitted raw sewage discharges into the environment. Such events across the entire region are not at all uncommon from complex treatment systems simply check news channels for more details</p> <p>The complexity of water supply and sewage treatment systems demands high technical competence. The reverse osmosis technology proposed by Southern Water, which has never been used in the UK to produce potable water, raises serious concerns. Southern Water's history of system failures can typically fall into three main categories:</p> <p>Human Error</p> <ul style="list-style-type: none"> <li>Often occurring during manual interventions or maintenance on automated software-controlled systems.</li> </ul> <p>Unexpected Environmental Conditions</p> <ul style="list-style-type: none"> <li>Increased flows and turbidity in water and sewage treatment due to climate change, overwhelming poorly designed systems.</li> </ul> <p>Poor Maintenance</p> <ul style="list-style-type: none"> <li>Resulting in operational issues.</li> </ul> <p>These failures suggest Southern Water's design and maintenance processes may well need urgent review. Recycling sewage effluent is a four-stage, highly complex process that relies on software-driven filtration systems and manual interventions. Given the susceptibility of sub-micron filtration to changes in effluent quality, this will likely require manual intervention during adverse conditions. Given Southern Water's track record, this is a significant concern for water consumers, as past interventions have led to pollution and system failures.</p> | <p>The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges. Regarding unsightly final results such as concrete embankments, this is a question for Portsmouth Water, which is developing the Havant Thicket Reservoir.</p> <p>Regarding the quality of recycled water, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>We are financially resilient and maintain a strong liquidity position, with the strong backing of our shareholders. They have injected more than £1.6 billion of fresh equity into the Southern Water group since they joined in 2021, and this financing has allowed us to spend £3bn during 2020-25 (or £1,500 per household) and implement our Turnaround Plan, to deliver for our communities and the environment. The Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> <p>We acknowledge the ongoing challenges and uncertainty faced by all companies operating in the UK water and wastewater sector, but we are confident in our ability to deliver what we have set out in our future investment plans and that when the Competition and Markets Authority (CMA) makes its PR24 determination it will provide sufficient funding for the investment in the 2025-2030 period.</p> |

|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
|           | <p>Concern 4: Southern Water's Environmental Protection Plans are Deplorable.</p> <p>Southern Water is not trying hard enough to to recognise moving river abstractions and abstraction boreholes which yield significant volumes of water and protect the environment. The prioritisation of such abstraction reform is being reduced at the same time sewage effluent recycling priority is increasing. If Southern Water moved the River Itchen abstraction point to the tidal limit, then:</p> <ul style="list-style-type: none"> <li>the abstraction yield would still be over 50 million litres per day - the same as it is today, only 12km of our precious chalk stream would be protected along with its biodiverse environments.</li> <li>Costs appear to be around 25% of sewage effluent recycling</li> <li>Less damaging to our environment and communities from excessive expensive pipe laying</li> <li>Tiny carbon impact on the environment compared with sewage effluent recycling</li> <li>Southern Water's preferred options are all schemes with the highest carbon footprint;</li> <li>they will almost certainly be unable to honour their strategic commitment to be carbon neutral by 2030.</li> </ul> <p>Examining Southern Water plans's environmental impact tables show that</p> <ul style="list-style-type: none"> <li>Havant and Littlehampton effluent recycling schemes have the highest NEGATIVE environmental impact score of any of the options considered, and yet there are preferred options.</li> <li>The effluent recycling schemes to be developed by 2035 each have a higher carbon impact than the transfer of water from Norway by a fleet of eight sea tankers, and yet all of these options are preferred.</li> </ul> <p>The proposal to transfer water from Norway via eight sea tankers is utterly implausible. There are no dedicated berths at Southampton Docks, the water's high acidity would require extensive new treatment facilities, and a costly, long pipeline would be needed. This idea seems more like a deliberately unviable option to make effluent recycling appear more reasonable by comparison.</p> <p>Construction of infrastructure for sewage effluent recycling will be highly damaging for our communities and for our environment. Tens of kilometres of pipeline interconnecting Havant Thicket Reservoir with [REDACTED], Pulborough and [REDACTED] Sewage Treatment works will have a serious impact on both rural and urban environments and habitats. The risk of constructing large tunnel shafts and hundreds of piles through the 13m deep contaminated landfill waste site with unknown contaminants into the chalk aquifer below adjacent to Langstone Harbour are unacceptably high. Because of (b) above Southern Water should be told by regulators to find an alternative site for their Havant recycling plant.</p> |                         |

|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
|           | <p>"Business as Usual" operation of sewage effluent recycling will be highly damaging to our environment and the Government's commitment to carbon neutrality</p> <p>Southern Water recently trialed reverse osmosis (RO) plants in Havant and also in [REDACTED] but the results were deeply concerning and cast serious doubt on the technology proposed for full-scale deployment. The trial equipment evidently failed to remove unexpected contaminants and even introduced new pollutants into the output water. Southern Water claims the full-scale technology will differ, raising the critical question: why wasn't the trial conducted with a more representative system to ensure its ability to deliver pure, contaminant-free water? DEFRA should demand answers, as the trial data - FOI delayed for over 12 months, reveals alarming findings:</p> <ul style="list-style-type: none"> <li>• Bacteria: Present in output water, despite expectations of complete removal.</li> <li>• Total Dissolved Solids: Found in levels above zero, contrary to expectations.</li> <li>• Disinfection Byproducts: Detected in output water, absent from input water, suggesting they were created during treatment.</li> <li>• Heavy Metals: Including arsenic, lead, salt, and strontium, found in the output water.</li> <li>• PFAS ("Forever Chemicals"): Traces of PFOS and PFOA detected in some samples.</li> <li>• Pesticides: Present in output water.</li> <li>• Volatile Organic Compounds (VOCs): Including toluene and xylene, found in the treated water.</li> <li>• Trace Organics: Substances like phenol, 1,4-dioxane, and acrylamide detected.</li> <li>• Pharmaceuticals and Personal Care Products: Significant levels found in the output water.</li> </ul> <p>This trial therefore raises grave concerns about the reliability and safety of Southern Water's proposed RO technology and its ability to deliver the promised water quality. The trial also highlighted several critical oversights and inconsistencies that undermine confidence in Southern Water's proposed reverse osmosis (RO) technology:</p> <ul style="list-style-type: none"> <li>• No Testing for Microplastics/Nanoplastics: Despite knowing their presence in final sewage effluent, Southern Water failed to assess these contaminants in the output water. Recent studies have even detected nanoplastics in human bloodstreams. This is a deeply alarming unknown risk for consumers.</li> <li>• Inconsistent Testing Regimes: Testing parameters for RO plant input and output were inconsistent, particularly when compared with other Southern Water trials at [REDACTED] and Havant. Why the disparity?</li> <li>• Unaccounted Industrial Effluent: No consideration was given to the impact of tankered industrial waste with unknown constituents at [REDACTED] WwTW, a significant portion of the input source.</li> </ul> |                         |

|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
|           | <ul style="list-style-type: none"> <li>Variability of Source Effluent: The trial revealed highly variable input water (final sewage effluent), including fluctuations in total dissolved solids and turbidity, which advanced filtration is known to struggle with managing it effectively.</li> <li>No Contingency for Plant Failure: There are no clear plans for managing failures that I could find, which are a real risk given Southern Water's history of systemic issues.</li> </ul> <p>These gaps raise serious concerns about the technology's reliability, particularly under real-world conditions with inconsistent and unpredictable inputs.</p> <p>Very high energy use, £3M per year is a huge electricity bill. Southern Water says that [REDACTED] WwTW will provide some of the energy for the recycling plant - this is not true as the WwTW is not self-sufficient itself. Southern Water has positioned this plant as a drought resource; however, it must be operated continuously, even when the output is not required for supply. The reverse osmosis (RO) process is highly sensitive and can suffer irreversible damage if production is halted, leading to costly repairs or replacement. As a result, the plant must operate at all times, regardless of actual demand.</p> <p>Even with reduced output, the plant continues to consume significant energy, generate carbon emissions, and incur ongoing maintenance and operational costs. This approach undermines its efficiency and raises serious questions about the commercial sustainability and cost-effectiveness of its design, particularly in non-drought conditions.</p> <p>The production of highly toxic, concentrated reject materials at each of the four filtration stages poses a significant environmental and ethical challenge. While such materials were previously discharged into the environment with treated wastewater, the reverse osmosis (RO) process expends substantial financial and carbon resources to remove these contaminants. Diluting and discharging this concentrated waste back into the environment is both counterproductive and environmentally irresponsible. Southern Water must develop a robust, environmentally sound plan for their reject stream disposal. The suggestion of dumping them into the sea is not only shocking but undermines the entire purpose of the filtration process from an environmental perspective.</p> <p>Serious technical filtration issues are likely if the composition of the final effluent changes unexpectedly. Such variability could disrupt the delicate balance required for effective filtration processes. If manual (human) intervention becomes necessary, Southern Water's track record raises significant concerns about the potential for operational errors or mismanagement. These failures could lead to catastrophic plant malfunctions, resulting in untreated or inadequately treated effluent being released into the environment, causing severe ecological damage. Robust systems and fail-safes must be in place to prevent such outcomes, and oversight mechanisms should ensure accountability and transparency in addressing these risks - and this should have been indicated in the consultation and it was not!</p> |                         |

|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
|           | <p>The environmental impact on the Havant Thicket Reservoir is still unknown. It has not been examined yet. DEFRA should ensure this investigation is complete before any decisions are made.</p> <p>No independent monitoring of recycled sewage effluent into the reservoir has been proposed - this is problematic as is evident from the impact of Southern Water's self-policing of sewage discharges. This is unacceptable - independent monitoring is essential. The visual impact on Langstone Harbour SSSI and Ramsar sites would be significant.</p> <p>Concern 5: Southern Water's Openness and Transparency concerns</p> <p>The consultation's 35 volumes make it overwhelmingly inaccessible for most citizens to assimilate Southern Water's plans. It took me months to review and understand the content. Regulators should ensure such documents are collectively summarised as a complete body of work to encourage broader participation. Southern Water's use of multiple consultants resulted in inconsistent presentation, language, and style, further complicating efforts to piece together and understand the information holistically. Regulators must require clear, consolidated summaries to enable meaningful public participation. I believe this complexity is deliberate, allowing Southern Water plausible deniability while effectively obscuring critical information.</p> <p>Southern Water made it nearly impossible for citizens to access restricted documents, restricting 12 volumes under claims of national security and other nebulous/curious reasons. These could only be viewed under tight surveillance at Southern Water HQ, including audio and video monitoring, and I was even escorted to the toilets. I had to take a holiday from my work and I had to pay for my own transportation to get there that I could ill afford - this demonstrates why only a dozen or so viewers out of 4+ million customers could see these documents. A questionable NDA was also imposed upon those viewers. Upon review, the restricted content appeared to lack legitimate grounds for confidentiality, instead revealing Southern Water's preference for profit-driven, environmentally damaging options. DEFRA should properly review the criteria for restricting documents, as these inaccessible volumes contained critical information essential for meaningful public engagement and little or no apparent confidential content. This significantly demonstrated a lack of openness and transparency in Southern Water's approach and seriously shut down any open debate that should have happened.</p> <p>Southern Water has blatantly manipulated the planning process to position effluent recycling as the preferred option, treating it as a foregone conclusion. Despite presenting volumes of data, they fail to provide a clear justification or summary for their decisions. Scathing feedback from statutory consultees, buried in "restricted" documents largely based on public domain sources, raises serious questions about why this information was unnecessarily obscured in this way. This lack of transparency and deliberate obscuring of critical criticism underscores Southern Water's failure in openness and accountability. I noted the absence of justification and selection reasoning and the Environment Agency and Natural England also noted this glaring omission - Southern Water's response to this criticism was abjectly dismissive and DEFRA needs to clarify if Southern Water's response was technically reasonable</p> |                         |

|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
|           | <p>The Environment Agency recommended: “there is not enough detail on the justification or alternatives - there is a potential for less damaging solutions to have been missed out and not carried forward which would create a greater risk to the environment. There is a potential non-compliance risk of challenge or objection if all relevant info on option selections and the WRMP’s response to the SEA findings isn’t addressed”</p> <p>The Environment Agency required the following action: Southern Water needs to include a summary of the option screening process and reasons for selection. Also “provide narrative on the reason why the plans were discounted”, “...further commentary on how the SEA has influenced the dev of WRMP24 options selected and any mitigating and monitoring requirements”.</p> <p>Southern Water’s response to the Environment Agency: Summarily dismissed the Environment Agency’s observations and demands claiming its “complicated”. The fact remains that the public still do not have a competent summary of why more sustainable, environmentally friendly options were sidelined in favour of environmentally damaging “pet projects”</p> <p>Natural England also noted the failure of Southern Water to provide information on option selection. They say “Southern Water must ensure that all options within its WRMP have been assessed fully. For a number of option Natural England considers that insufficient evidence has been provided to rule out an adverse effect on integrity with sufficient certainty or the HRA acknowledges that there is insufficient evidence at this stage” They go on to observe that “Natural England found it difficult to review options and determine whether assessment has been completed appropriately both at screening and appropriate assessment stages”</p> <p>Natural England also said they “have concerns about the SEA screening and conclusions” and that “...the list of options screened in the SEA and the HRA appear to be different”.</p> <p>Southern Water recently conducted its own consultation that was deeply flawed and misleading. The survey focused on customer views about effluent recycling but was heavily biased, framing questions to prevent negative feedback. Now, internal documents reveal Southern Water is using these skewed results to falsely amplify community support for effluent recycling. They claim customer preference scores for effluent recycling are moderate and comparable to aquifer storage; that’s despite evidence to the contrary. This manipulation is unacceptable, and I urge DEFRA to review Southern Water’s consultation to ensure it meets regulatory standards.</p> <p>The illustration on pages 9 and 17 of Southern Water’s Consultation Brochure is highly misleading , it fails to show that the recycled water will be supplied to potentially Portsmouth Water’s customers in times of drought and emergency with more routine supply after 2040.</p> <p>Southern Water appears to be using population growth figures to favour its preferred projects, I am not clear what is being used? With conflicting projections in the consultation/ONS documents creating confusion even for informed readers. This raises serious concerns about</p> |                         |

## Water Resources Management Plan 2024 Statement of Response

### Annex 3: Our responses to feedback from the general public

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>transparency and credibility, especially as population growth is a key driver of Southern Water's plans. DEFRA must ensure clear, consistent data is provided and hold Southern Water accountable for transparency, ensuring the public fully understands the basis of these proposals.</p> <p>Southern Water's deceptive claims that recycled sewage effluent is widely consumed as drinking water around the world, as suggested in their plans, are largely unsubstantiated. Research indicates that its use is predominantly limited to industrial, farming and municipal purposes rather than direct human consumption. In regions where recycled water is avoided for drinking, such as Singapore, reliance on bottled water has surged, creating altogether different unexpected and significant environmental challenges like plastic waste accumulation. DEFRA should demand that such claims are properly substantiated and disseminated to the public domain. The proposals fail to address whether residents in the Portsmouth Water area will experience noticeable changes in the taste of their water during drought conditions. There is also no clarity on whether the taste will fluctuate over time as the proportions of inputs to the reservoir change. This omission leaves a significant gap in understanding the potential impacts on water quality and consumer experience.</p> <p>Public consultation on effluent recycling plants was insufficient. Posters should have been prominently displayed in all areas directly affected by the proposals to ensure local communities were adequately informed. Furthermore, all Southern Water and Portsmouth Water consumers, who stand to be significantly impacted by such a fundamental change to their water supply, should have been properly consulted. This critical engagement was notably absent, undermining transparency and public trust in the process.</p> <p>Moody's said Southern's "history of material operational and financial under-performance" could imperil its plans to borrow £4bn from investors. This is a material consideration not currently reflected in Southern Water's planning.</p> <p>----- ENDS -----"</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP756   | <p>Firstly, I am writing to express concern that this consultation hasn't been publicised through post, advertisements in the media or via billing. There's been no public meetings held either. I am an Emsworth resident and only discovered the proposal and consultation from a Green Party leaflet through the door.</p> <p>I am deeply concerned for my health and that of my young family from proposed sewage effluent recycling and reject this element of the proposal.</p> <p>Southern Water have significant leaks across their network and lose nearly 20% of the water they treat and collect only 1% of rainfall.</p> <p>The investment should be in stopping the leaks and collecting rain water. This should ensure plentiful supply.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-</p> |

|           | <p>Southern Water have already been reasonable for many sewage discharge incidents across the South Coast and the areas around Chichester, Emsworth and Langstone.</p> <p>Bills have rocketed and customers are not seeing improvements in service.</p> <p>I ask that leaks and better rainfall collection provision are exhausted in the first instance and further independent research is produced in relation to sewage effluent recycling on human health.</p> | <p>targeted adverts on social media. We also publicised the consultation in our newsletter which, went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The Hampshire Water Transfer and Water Recycling Project (HWTWRP) is one of the schemes we need to protect the globally important River Itchen and River Test chalk rivers. The scheme will reduce our reliance on these internationally protected rivers during drought and provide a more reliable and sustainable source of water in the future. The increase in customer bills in the first year is a recognition by Ofwat of the costs of developing this scheme, which will be highest in the first half of AMP8.</p> <p>Regarding storage, we are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |
| WRMP757   | <p>I wish to strongly object to the Southern Water revised draft Water Resources Management Plan on the following basis:</p> <ol style="list-style-type: none"> <li>1. Climate Adaptation and Water Capture: The plan neglects to adapt to predicted climate changes by not prioritising the capture and storage of winter rain for use during dry summers, missing an opportunity to use rainwater as a quality water resource.</li> </ol>                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>2. Inadequate Review of Alternatives: Southern Water (SW) failed to conduct a full review of the plan, citing cost and time constraints, despite the critical need for sustainable solutions for the rivers Test, Itchen, and Pulborough, and the high volume of objections to previously selected options.</p> <p>3. Focus on Short-term Solutions: The plan prioritises immediate gap-filling solutions over sustainable options, particularly due to delays in recycling options in Hampshire and Littlehampton.</p> <p>4. Effluent Recycling Concerns: The proposed timescales for effluent recycling are unrealistic given complexities, public opposition, and risks, with the scheme likely delayed further, impacting chalk rivers.</p> <p>5. Over-reliance on Drought Measures: Continued reliance on drought permits is extended unreasonably to 2034, risking environmental harm.</p> <p>6. Population and Abstraction Assumptions: SW's pessimistic population growth assumptions drive a demand deficit, while precautionary abstraction reform assumptions further justify unsustainable recycling schemes.</p> <p>7. Leakage and Resource Management: SW loses significant water to leaks, with inadequate improvement plans, impacting resource management despite potential for greater leakage reduction.</p> <p>8. Hampshire Grid and Investment Model: Lack of consideration for the Hampshire Grid improvements and an investment model that favours large infrastructure over sustainable options are notable issues.</p> <p>9. Environmental and Economic Viability: The effluent recycling scheme has high operational costs, carbon impact, and environmental risks, with inadequate environmental assessment and consultation.</p> <p>10. Consultation and Public Engagement: SW failed to engage meaningfully with customers, restricts critical documents, and ignored customer preference for natural solutions, raising transparency concerns.</p> <p>Southern Water have clearly not learned any lessons from the previous plan being rejected and have just rehashed the plan with the expectation that with no alternatives outlined, it will somehow be approved.</p> <p>Corporate greed cannot be allowed to triumph over something as basic and vital as our drinking water supply. Please reject this plan and urge Southern Water to properly consult their Clients and formulate a environmentally sustainable plan which will serve the region in the years to come with a lasting legacy.</p> | <p>the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>With regard to short-term solutions, the purpose of the targeted options appraisal process for rdWRMP24 was to mitigate the impacts of a proposed extended reliance on the River Test and Candover drought options in Hampshire post 2030 and to limit the use of Pulborough surface water drought option under droughts of more than 1-in-200 year severity beyond 2030. Annex 20 to our rdWRMP24 Technical Report describes the work carried out in this regard. The scope did not include a full reappraisal of options for rdWRMP24.</p> <p>Regarding delivery timescales, we aim to have the Hampshire Water Transfer and Water Recycling Project operational by 2034.</p> <p>It is our desire to 'avoid' use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used</p> |

| Reference | Feedback | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>The government has set a 25 Year Environment Plan target of 75% of waters to be close to their natural state. Abstraction reform plays a key part in this plan. Sustainable water abstraction is essential to ensure that river flows and groundwater levels support ecology and natural resilience. Since 2008 the Environment Agency has made changes to over 270 abstraction licences to prevent over 30 billion litres of water per year being removed from the environment where abstraction is unsustainable.</p> <p>Water companies, through their WRMPs, need to plan for future deficits in supply generated by reductions in abstraction licences. Through the Water Industry National Environment Programme (WINEP), studies and investigations are ongoing to understand the environmental impact of our current licences. Any future licence changes are informed by the conclusions of these WINEP environmental studies.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p> <p>The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> |

| Reference | Feedback | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p>                                                                                                                                                                                                                                                                                                        |
| WRMP758   | <p>Firstly, how would I know about this proposed development if it had not been brought to my attention by our councillor? Certainly Southern Water have not written to me.</p> <p>Rather than recycling waste water into Havant Thicket Reservoir it would be better to collect the winter rainfall (only 1% of which being collected at present) and store it in new reservoirs for when it is needed.</p> <p>1/5 of water delivered by Southern Water is lost to leakage. This is an issue which needs to be tackled urgently.</p> <p>Southern Water have outrageously not treated effluent effectively. For me, personally, I love swimming in the sea in Emsworth but it is just too dangerous since the sea is so polluted from their discharges. We just can't trust them to treat sewage effluent in a complex new system at Havant Thicket Reservoir.</p> <p>DEFRA: please reject the Southern Water plan and get Southern Water to develop a more sustainable plan that works with climate change and puts the environment first.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>At local scale, we have been promoting the use water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers. <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP759   | <p>I strongly support the 5 major concerns regarding Southern Waters WRMP as outlined below:</p> <ol style="list-style-type: none"> <li>1 Collect more rainwater</li> <li>2 Address leakage issues</li> <li>3 Southern Water current management ineffective</li> <li>4 Current inadequate storage capacity of rainwater to be addressed</li> <li>5 Risk from developing the effluent recycling plant on landfill unacceptably high</li> </ol> <p>Thankyou,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates.</li> <li>2. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</li> <li>3. Your point is noted.</li> <li>4. Our plan currently includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. It is worth noting that reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We will continue to revisit and review the potential wider use of Managed Aquifer</li> </ol>                                                                                                                                                                            |

SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| WRMP761   | <p>Southern Water in 2022 made a proposal to use reverse osmosis as the solution to our region's future water supply. They have now continued with this proposal but needless to say have not given much warning to the public of their scheme in view of the originally adverse reaction. The consultation ends 4th December 2024.</p> <p>The objections to the scheme could be summarized .</p> <p>Reverse osmosis has only been used in desert regions where little rainfall occurs , i.e. is the only option available. That is NOT the case in Southern England.</p> <p>The costs of establishing the scheme are very high initially and have significantly increased since 2022 .It will involve very significant sums of money being borrowed increasing the debt burden of Southern Water on which interest will need to be paid ! This appears to me as Financial engineering, a practice which a overseas Bank previously involved with Thames Water is very skilled !! . Could this be the real reason for this proposal being continued.?</p> <p>The site of the plant is on reclaimed land at Broadmarsh adjoining the [REDACTED] water treatment works there is significant risk of leakage in Langstone harbour . An increase in water pollution is not welcome.</p> <p>The proposals involve very significant works in pipeline construction to move water to [REDACTED] 40 miles away. Inflation will increase both build and running costs which will need to be paid for by customers or the taxpayers,</p> <p>The plant will need to run 365 days a year . The membrane's use will need renewing every five year. The plant equipment will need replacement /updating every 10 years over its expected life of 60 years.The operating costs are not mentioned in the proposal . Where is the increased electricity generation capacity needed to run the plant ?</p> <p>Portsmouth water has commissioned Havant Thicket reservoir which stores spring water for drinking . Havant residents are welcoming of that scheme but are VERY alarmed that Southern Water intends to pipe recycled water to Havant Thicket.</p> <p>Southern Water has discontinued its proposals for a desalination plant on Southampton Water . Whilst desalination is also costly in electricity use it is proven technology in use in England which reverse osmosis is NOT. !</p> <p>No consideration appears to other possible solutions to the need for water.</p> <p>1. For the amounts of money involved in the [REDACTED] scheme why not examine sites for water storage at new reservoirs . Should three sites be identified and constructed with suitable treatment plants they could be in use for 200 years. ! These would b e environmentally friendly .</p> <p>2. The new treatment plants could be located downstream of present sites i.e. nearer the river's mouth is benefiting from increased water volume .Therefore nearer to the potential customers</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see</p> <p><a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a></p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |

|           |                                                                                                                                                                                                                                                                                                             | <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter. Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>With regard to planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>We are planning to build new reservoirs where feasible. This includes the Havant Thicket Reservoir, the South East Strategic Reservoir Option (SESRO) and the River Adur Offline Storage. However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> |
| WRMP762   | <p>As a Havant resident I object to the current proposals because they are not good for the environment, and not good for the residents of SE Hampshire. Particular objection to using treated effluent as drinking water, when there is no need.</p> <p>A better plan is to :</p> <p>a) Reduce leakage</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>With regard to supplying raw water only to Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP763   | <p>I object to the Southern Water Proposal for the following reasons (summarised to keep it brief)</p> <ul style="list-style-type: none"> <li>• Totally inadequate public consultation. Neither Southern Water nor Portsmouth Water has consulted their customers on this. I am a customer of both and the only way I found out about it was by chance!!!! I object in the strongest terms at being forced to drink recycled effluent when there are environmentally better and cheaper options available.</li> <li>• Very expensive solution, minimum £1.2 billion. How is this best value for customers when they could build 3 new winter storage reservoirs for the same cost! Plus the winter storage reservoirs will have a much better environmental impact i.e. opportunities for recreation and biodiversity.</li> <li>• Massive infrastructure requirements including 40km of pipework plus associated storage and pumping equipment. Totally unnecessary! Greener and cheaper alternatives are being ignored!</li> <li>• Massive risk of pollution both during the build and during normal running. There is a fragile ecosystem around the proposed construction sites (Langstone Harbour and Broadmarsh) and there is a high probability that this will be irreparably damaged by Southern Water's proposal.</li> <li>• Huge energy costs to build and run the proposed solution. This is not only expensive, it's a far-from-green solution.</li> <li>• Massive loss of opportunity to create the very first chalk spring fed reservoir. Adding recycled effluent to this will damage the ecosystem that could be created. It will also add additional cost as the treated effluent will have to undergo further processing before it is added to the reservoir water!</li> <li>• Safety: Just how safe is this solution? Southern Water doesn't have a great track record when it comes to polluting the environment.</li> <li>• Even if it works, the thought of drinking treated effluent will cause many people to drink bottled water instead. This will create its own environmental nightmare. How many plastic bottles will be bought and discarded unnecessarily?</li> <li>• Why not investigate properly the other greener alternatives and force Southern Water to spend more money on fixing leaks? Some of the alternative solutions: <ul style="list-style-type: none"> <li>o Move the river extraction point closer to the tidal limit</li> <li>o Collect and store rainfall during winter</li> </ul> </li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Off-line Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> |

|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>o Become part of a UK network to be able to move excess water from one area to another when needed.</p> <p>Please, please reject the Southern Water Proposal. Protect our environment, our water and the new Havant Thicket Reservoir.</p> | <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>The Havant Thicket Reservoir was selected in WRMP19, has been through a separate consultation process and we are progressing with its delivery. It is not a scheme introduced in WRMP24. The cost for the Havant Thicket Reservoir is included in the Water Resources Planning tables that accompany our plan. Annex 12 to our rdWRMP24 listed all options considered for WRMP24, including those that were not taken forward for a more detailed assessment (Section 3 of Annex 12).</p> <p>Regarding effects on coastal water bodies, A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir. Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>Regarding a national network, South East Strategic Reservoir Option (SESRO) in the vicinity of Abingdon is being jointly developed by Thames Water, Affinity Water and Southern Water as a regional solution. However, for the purpose of WRMP24s, it is included in Thames Water's WRMP24. Sensitivity analyses were carried out by using different sizes of SESRO as well as excluding SESRO altogether. The results show that if SESRO cannot be built, it will need to be replaced by a large transfer from Severn Trent Water to Thames Water or another reservoir. For further details, see Section 10 of Thames Water's WRMP24<br/> <a href="https://www.thameswater.co.uk/media-library/home/about-us/regulation/water-resources/wrmp24/technical-report/programme-appraisal.pdf">https://www.thameswater.co.uk/media-library/home/about-us/regulation/water-resources/wrmp24/technical-report/programme-appraisal.pdf</a></p> <p>The Thames Water to Southern Water Transfer (T2ST) proposes to convey potable water from Thames Water's Swindon and Oxfordshire water resource zone to Southern Water's Hampshire area. As there is not currently a surplus of supply within the Thames Water Resource Zones, the solution is dependent on the prior development and commissioning of an additional water resource option – the River Severn to River Thames Transfer (STT) and/or the South East Strategic Reservoir Option (SESRO). The T2ST pipeline will not convey untreated water from the River Thames, but will convey treated potable water that has been sourced and treated either from a new reservoir (SESRO) and/or by a direct water transfer from Severn Trent (STT). More detailed information on the T2ST scheme is available<br/> <a href="https://www.thameswater.co.uk/about-us/regulation/strategic-water-resource-solutions/water-transfer-from-thames-water-to-southern-water">https://www.thameswater.co.uk/about-us/regulation/strategic-water-resource-solutions/water-transfer-from-thames-water-to-southern-water</a></p> |
| WRMP764   | <p>This email is a request for Defra to reject the Southern Water Revised Draft Waster Resources Management Plan.</p> <p>My principle concern relates to the Havant Thicket reservoir. This project initiated by Portsmouth Water has been hugely controversial locally. Eventually permission was given for the project to go ahead based on the assumption that it would enable clean spring water to be stored before it was injected into the water supply. I accept this decision and believe that the project should now go ahead.</p> <p>The project has subsequently been hijacked by Southern water for use as a storage site for treated effluent. This is a step too far, and I strongly object because:</p> <ol style="list-style-type: none"> <li>1. There will be contamination in this water. I understand that it is virtually impossible to remove traces of drugs, both legal and illegal from treated water. This contamination will be carried over into the wildlife in the reservoir – primarily birds and fish.</li> <li>2. I regard Southern Water as completely untrustworthy in their ability to make absolutely sure that the operational systems perform to the promised specification continually.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Regarding the quality of recycled water, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>3. Southern Water have lied again and again about their discharges and the manner in which they are recorded. They have to be made to understand that there are consequences to this disingenuous behaviour. Trust in Southern Water has been destroyed.</p> <p>4. There are other less risky ways to support the water supply – most effectively by having a zero tolerance of leaks in the system.</p> <p>5. My understanding that this scheme requires water to be continually pumped from sea level up into the South Downs, using large quantities of energy.</p> <p>I hope that you will therefore reject this proposal from Southern Water.</p>                                                           | <p>“forever chemicals” in the purified recycled water produced. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Water quality in Havant Thicket reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> |
| WRMP765   | <p>This ridiculous and hugely costly development should not proceed further for the following reasons:</p> <p>1.COST</p> <p>At £1.2 billion we will be landed with an HS2 -type disaster. That cost estimate has been spiralling upwards and will continue to do so. The running costs are likely to escalate too, and are considerable. All the machinery is forecast to last only 60 years, then we start all over again . Far more effective and much longer lasting would be 3 new reservoirs for the same cost , and they would last 200 years with much smaller running costs. The recycling scenario has not been used before in the UK, and it is all too easy to imagine costs escalating as with HS2.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>Rain is cheap, falls out of the sky in abundance, and climate change will bring heavier winter rainfall to compensate for the drier summers, and extra reservoirs will catch the winter rains.</p> <p>2. HAZARDS</p> <p>There are too many hazards with this scheme.:</p> <p>Disturbing the landfill site, a time bomb of toxic solvents and hydrocarbons- which would be likely to leach into the surrounding environment.</p> <p>Dumping reject water from the effluent recycling process into the Solent -we've already seen what Southern Water have achieved with water quality in the local harbours and Solent. The harbours will become totally unsafe [it's not good already] for recreational sailing, paddleboarding, etc</p> <p>3. INADEQUATE AND RUSHED ASSESSMENTS OF THIS AND OF ALTERNATIVE SCHEMES</p> <p>There appears to have been a reluctance to look at other, much less environmentally dangerous, schemes. The whole thing appears to be pushed through with indecent haste, and with totally inadequate communication from Southern Water. Why in these climatically and economically challenging times are we not looking hard and long at the other far cheaper and less costly to run alternatives, ones that are much less damaging to the environment?</p> <p>Could it be that the £45 million profit to be made by Southern Water is a factor in this?</p> <p>Please DEFRA do not allow this dreadful scheme to go ahead</p> | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. All of the hormones tested in SWS trials (testosterone, progesterone, estriol and estrone) returned a non-detect result. Although it is true that not all the pharmaceuticals and personal care products (PPCPs) are rejected by reverse osmosis membranes, our results recorded concentrations an order of magnitude, or lower, than found in wastewater; and for some PPCPs a greater concentration can be found in most natural water systems globally. Even in cases where some compounds were detected, the concentrations recorded were in the order of parts per trillion (except for sucralose and sulfachloropyridazine which were measured in the order of low microgram/litre).</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, starting in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP766   | <p>It is understood that Southern Water proposes to pump sewage effluent into the new reservoir at Havant Thicket, which was originally approved by Havant District Council to store pure spring water for distribution to the residents living in the South East area served by the Portsmouth Water Company.</p> <p>I am OPPOSED to the latest proposal to pump sewage effluent to mix with the pure spring water at the HT Reservoir</p> <p>This process is energy intensive and unsustainable. Due to climate change, we have the opportunity to set an example and also adhere to our sustainable commitments through the use of an energy efficient and sustainable solution for the effluence.</p> <p>There is no public trust in Southern Water which has chosen profit over people for too long. They have dumped sewage in our rivers and sea and has lost public trust. There has been a public outcry and all you have to do is note the first upset in the local election for MPs—which had mostly to do with the sewage issues and Southern Water. This trust will no doubt carry on to lack of trust in drinking recycled sewage water and could lead to countless households purchasing bottled water.</p> <p>We must:</p> <ul style="list-style-type: none"> <li>• We request that you demand that Southern Water do more to repair leaks and replace mains. If they put the funding &amp; priority in they should be striving to achieve a 70 % reduction in leakage by 2050.</li> <li>• Educate the people from child to elder about the importance of conserving water.</li> <li>• Provide incentive to harvest rain water for gardens</li> <li>• Create more reservoirs</li> </ul> <p>An in depth independent review of the ability for SW's recycling engineering to satisfactorily cleanse the recycled effluent removing all known chemical pollutants and pharmaceutical contaminants by independent specialists in this field.</p> <p>Furthermore, we request that the authorities conduct:</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>Regarding the quality of recycled water, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We have dedicated budget for both proactive and reactive</p> |

|           | <ul style="list-style-type: none"> <li>• An in depth independent review of the entire proposed infrastructure by independent qualified professionals in this field be published.</li> <li>• An in depth independent review of the costings of all the proposed infrastructure, pipes, pumping stations, etc. by independent financial advisers.</li> <li>• Total cost analysis of the on going maintenance required for a project that will be required to run daily all year round and not just in drought conditions and to forecast the life time of such a project.</li> <li>• An independent review of the state of the infill-site at Broadmarsh which will be cut open to enable all the 45kms of piping required to transfer the water to the [REDACTED] pumping station and beyond.</li> <li>• Forecasting of the chemical and health impacts the opening of this infill site will have on the harbour and communities.</li> <li>• Full review of the life cycle emissions</li> </ul> <p>Please note, I am 100% in favour of the original plans for the Reservoir primarily because we need to store water in the rainy months so that we can have water during drought or times with less rain. Our catchment is particularly vulnerable due to the karst in the chalk and the water flows quickly through small fissures in the chalk to the source. It makes sense to conserve it in a reservoir/s.</p> <p>The site is designated by the Environment Agency as a "Principal Aquifer", one of only 11 such sites in the UK. It is also within an Aquifer "Source Protection Zone" classified as "Outer Zone 2". Our water supplies are extracted by Portsmouth Water (PW) through the Havant and Bedhampton Springs, 6 km to the SW of the site.</p> <p>Clean groundwater is precious, finite and essential for health, the environment and our infrastructure. Our groundwater catchment is vulnerable and it is our duty to support, conserve and protect this fragile groundwater ecosystem and to promote catchment management approaches that will ensure its purity and longevity.</p> <p>Many thanks for your consideration of these points.</p> | <p>maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>Our home visits programme and schools programme are specifically targeted at raising awareness about water use and providing helpful tips on reducing water consumption in homes. In AMP8 we will be building a Water Calculator to help educate customers on their own water use and provide useful practical advice on how to save water.</p> <p>At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP767   | <p>I object to Southern Water's draft Water Resources Management Plan.</p> <p>As both a Southern Water (SW) AND a Portsmouth Water (PW) consumer, I am especially concerned with the creation of an Effluent Recycling Plant at Broadmarsh (ERP) and its use for pumping "treated" effluent to the Havant Thicket Reservoir.</p> <p>ISSUE 1</p> <p>The South and SE are vulnerable to water stress. The UK is suffering far more frequent and intense storms leading to localised flood events mostly in Winter, but also in Spring and Autumn.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
