## Glossary

| Acronym       | Term                                                | Definition                                                                                                                                                                                                                        |
|---------------|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AMP</b>    | Asset Management Plan                               | Water company business plan over a 5-year period.                                                                                                                                                                                 |
| <b>AMR</b>    | Automatic Meter Reading                             | Type of water meter that can be read remotely using drive-by technology.                                                                                                                                                          |
| <b>ASR</b>    | Aquifer storage and recovery                        | A way of increasing the amount of water available by increasing the recharge of groundwater storage during wet periods so the water can be used sustainably in drier periods.                                                     |
| <b>BVP</b>    | Best Value Plan                                     | A Water Resources Management Plan which as part of its development considers a range of factors (alongside economic cost) with the aim of increasing the overall benefit to customers, the wider environment and overall society. |
|               | Catchment                                           | The area from which precipitation (rainfall) and groundwater would naturally collect and contribute to the flow of a river.                                                                                                       |
|               | Central area                                        | Supply area comprising the Sussex North, Sussex Brighton and Sussex Worthing water resource zones.                                                                                                                                |
| <b>CMA</b>    | Competition and Markets Authority                   | The CMA can determine a Price Review if a water company requests it. If a company asks for the CMA to determine a Price Review, the CMA determination takes precedence over the Ofwat determination.                              |
| <b>Defra</b>  | Department of Environment, Food & Rural Affairs     | The Government department responsible for setting both water and environmental policy.                                                                                                                                            |
| <b>DO</b>     | Deployable Output                                   | The output of a source or bulk supply as constrained by licence (if applicable); pumping plant and / or well / aquifer properties; raw water mains and / or aqueducts; transfer and / or output main; treatment; water quality.   |
|               | Drought Permit                                      | A statutory authorisation granted by the Environment Agency under drought conditions, which allows for abstraction/impoundment outside the normal conditions/schedule of existing licences on a temporary basis.                  |
|               | Drought Order                                       | A statutory authorisation granted by the Secretary of State during drought to modify abstraction / discharge arrangements, augment, use or to set other requirements on a temporary basis.                                        |
| <b>dWRMP</b>  | Draft Water Resources Management Plan               |                                                                                                                                                                                                                                   |
| <b>DWI</b>    | Drinking Water Inspectorate                         | The government's drinking water quality regulator.                                                                                                                                                                                |
|               | Eastern area                                        | Supply area comprising the Kent Thanet, Kent Medway East, Kent Medway West and Sussex Hastings water resource zones.                                                                                                              |
| <b>EA</b>     | Environment Agency                                  | The government's environmental and water resources regulator                                                                                                                                                                      |
|               | Environmental Destination or Environmental Ambition | A strategy developed at a regional level to help enhance the natural environment through reduction to water resources activities and by sustainable abstraction.                                                                  |
| <b>ERP</b>    | Emerging Regional Plan                              | The draft least cost regional plan prepared by Water Resources South East under the National Framework as was consulted upon in January 2022.                                                                                     |
| <b>fdWRMP</b> | Final Draft Water Resources Management Plan         |                                                                                                                                                                                                                                   |
| <b>GDPR</b>   | General Data Protection Regulation                  |                                                                                                                                                                                                                                   |
| <b>HRA</b>    | Habitat Regulations Assessment                      | Assessment to consider potential for significant effects (if any) of options and strategies on designated European sites                                                                                                          |

|               |                                                                 |                                                                                                                                                                                                                                                                                                             |
|---------------|-----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>HWTWRP</b> | Hampshire Water Transfer and Water Recycling Project            |                                                                                                                                                                                                                                                                                                             |
| <b>MAR</b>    | Managed aquifer recharge                                        | A controlled way of increasing the amount of water in groundwater.                                                                                                                                                                                                                                          |
| <b>MI/d</b>   | Mega litres per day                                             | Millions of litres per day.                                                                                                                                                                                                                                                                                 |
|               | National Framework                                              | The Environment Agency's national framework for managing future water need for England by the means of regional planning introduced in March 2020.                                                                                                                                                          |
| <b>NE</b>     | Natural England                                                 | The government's adviser for the natural environment in England.                                                                                                                                                                                                                                            |
| <b>Ofwat</b>  | Office of Water Services                                        | The economic regulator of the water sector in England and Wales.                                                                                                                                                                                                                                            |
|               | Outage                                                          | Temporary loss of Deployable Output.                                                                                                                                                                                                                                                                        |
| <b>PCC</b>    | Per Capita Consumption                                          | Average volume of water consumed by person in a household, generally expressed in litres per person per day (l/p/d) or litres per head per day (l/h/d)                                                                                                                                                      |
| <b>PR24</b>   | Price Review 2024                                               | Price reviews occur every five years and are carried out by our economic regulator Ofwat. These reviews determine how much water companies can charge customers to finance the investment required in the five year period.                                                                                 |
| <b>PWC</b>    | Portsmouth Water Company                                        |                                                                                                                                                                                                                                                                                                             |
| <b>RAPID</b>  | Regulators' Alliance for Progressing Infrastructure Development | The collaborative regulatory group of Ofwat, the Environment Agency and Drinking Water Inspectorate formed to accelerate development of new water infrastructure and design future regulatory frameworks.                                                                                                   |
| <b>RBVP</b>   | Regional Best Value Plan                                        | The Best Value Plan for the region prepared by Water Resources South East - as consulted on in Autumn 2022.                                                                                                                                                                                                 |
|               | Source                                                          | A named input to a water resource zone where water is abstracted from a well, spring or borehole, or from a river or reservoir.                                                                                                                                                                             |
|               | Section 20 Agreement                                            | The agreement signed by Southern Water and the Environment Agency during the Western Inquiry pursuant to Section 20 Water Resources Act 1991 (March 2018-2030) recognising the need to rely on drought permits and drought orders until long term infrastructure is in place to secure supply in Hampshire. |

| <b>T2ST</b>   | Thames to Southern Transfer                                     | An SRO enabling water from the South East Strategic Reservoir (a reservoir SRO) and/or the Severn to Thames Transfer (a transfer SRO) in Thames Water's                                                                                                                                                     |

|               |                                               |                                                                                                                                                                                                                            |
|---------------|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               |                                               | Swindon and Oxfordshire water resource zone to be transferred to Southern Water's Western area, being progressed as a collaboration between Southern Water and Thames Water.                                               |
| <b>TUB</b>    | Temporary Use Ban                             | A drought restriction imposed by water companies on customers. Restrictions include not using water supply for leisure pursuits such as watering a 'garden' using a hosepipe, filling a pool, washing a car, among others. |
| <b>TWUL</b>   | Thames Water Utilities Ltd                    | The registered name for Thames Water.                                                                                                                                                                                      |
| <b>UKCP18</b> | United Kingdom Climate projections 2018       |                                                                                                                                                                                                                            |
|               | Western area                                  | Supply area comprising the Isle of Wight, Hampshire Andover, Hampshire Kingsclere, Hampshire Rural, Hampshire Southampton East, Hampshire Southampton West and Hampshire Winchester water resource zones.                  |
|               | Western area Inquiry                          | A public inquiry into proposed changes to Lower Itchen, Test and Candover abstraction licences in Hampshire, held in March 2018.                                                                                           |
| <b>WFD</b>    | Water Framework Directive                     | European Union Environmental Legislation (transposed and retained into English law) committing to achieving good quality and good quantitative status of all water bodies.                                                 |
| <b>WINEP</b>  | Water Industry National Environment Programme | A list of environment improvement schemes that ensure water companies meet European and national targets related to water.                                                                                                 |
| <b>WRMP</b>   | Water Resources Management Plan               | Statutory plan produced by water companies every five years to plan to meet supplies over a minimum 25 year period.                                                                                                        |
| <b>WRP</b>    | Water recycling plant                         | A plant using advanced treatment techniques to convert treated wastewater into highly purified source water. Special membranes are used to remove salts and a range of other impurities.                                   |
| <b>WRPG</b>   | Water Resources Planning Guideline            | The Water Resources Planning Guideline prepared by the Environment Agency, Ofwat and Natural Resources Wales.                                                                                                              |
| <b>WRSE</b>   | Water Resources South East                    | Partnership of water companies and regulators in South East England working together to make best use of available water resources.                                                                                        |
| <b>WRZ</b>    | Water Resource Zone                           | The largest possible zone in which all resources, including external transfers, can be shared and hence the zones in which all customers experience the same risk of supply failure from a resource shortfall.             |
| <b>WSW</b>    | Water Supply Works                            |                                                                                                                                                                                                                            |
| <b>WTW</b>    | Wastewater Treatment Works                    |                                                                                                                                                                                                                            |

# 1 Introduction

We consulted on our revised draft Water Resources Management Plan 2024 (rdWRMP24) from 11 September 2024 to 4 December 2024. The consultation resulted in over 1100 representations. In order to respond to the feedback, we have divided it into the following categories and produced a separate document for each category as follows.

1. Feedback submitted via online questionnaire and as a result of a group action - Annex 2
2. Feedback from members of the public - Annex 3
3. Feedback from our regulators and other organisations - Annex 4

This annex covers feedback from members of the public and our responses.

## 2 Analysis of feedback

The feedback from members of the public and our responses are given in Table 1. We have reproduced all the comments from the general public into this document as received without correcting any spelling mistakes and/or grammatical errors in the original feedback. The only changes we have made are to:

- redact names and removing any personally identifiable information where necessary in order to comply with General Data Protection Regulation (GDPR).
- Redact site names that could potentially be non-compliant with the Security and Emergency Measures Direction (SEMD) and
- Redact material that could be commercially confidential.

In order to be open and transparent we have published almost all the fdWRMP24 documents on our website. The small number of restricted documents will be available to view in person via appointment at our head office.

**Table 1: Feedback on our rdWRMP24 and our responses.**

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| WRMP01    | <p>Thank you for this email. But I don't understand the need for the consultation. The solution is easy:</p> <ol style="list-style-type: none"> <li>1. Spend more money on maintenance, clearing waterways, drains etc.</li> <li>2. Stop blaming climate change as its being used as an excuse not to spend time and effort on doing these things.</li> <li>3. Stop making record profits and invest in the job in hand. This should not be profit driven.</li> <li>4. Stop Greed</li> </ol> <p>SIMPLE.</p>                                                                       | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1: We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>2: Climate change is pivotal to much of the work we are doing. As stated in the Government's policy paper <a href="#">Water abstraction plan: Environment - GOV.UK</a> "A changing climate is likely to bring greater variability in rainfall and higher temperatures. We expect less groundwater recharge and larger seasonal variations in river flow as well as changes to when and how extended dry periods occur. Sustainably abstracted water bodies will be more resilient to changes in climate and drought pressures so addressing unsustainable abstraction will help improve resilience to climate change."</p> <p>3 and 4: Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |
| WRMP02    | <p>Once again no quantification of benefits or costs.<br/>PR exercise only?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP04    | <p>Here are my comments on the Southern Water revised draft Water Resources Management Plan. I live in Emsworth, Hampshire and am a customer of Portsmouth Water (supply) and Southern Water (sewage). I live close to where Havant Thicket reservoir is being built. I support building more reservoirs, as they have a long life, are fairly cheap to run, and offer the possibility of leisure facilities for swimming, walking, fishing, and habitats. In other countries (Germany and Austria) the public have a right to access lakes for leisure. Given the popularity</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>of wild swimming and our need to improve mental and physical health, providing more options like this is a significant benefit.</p> <p>I also support moving river abstraction points downstream to the tidal/freshwater boundary so that water companies can take more water without damaging the upstream river. This takes advantage of the fact that modern technology can clean water from further downstream than could the Victorians - who obviously wanted water from as far upstream as possible. This is being explored by Portsmouth Water, but apparently not by Southern Water. It not only allows more abstraction but does so while increasing flow in the river upstream and thus improving river health. We should be taking advantage of modern technology like this.</p> <p>These are cheaper more sustainable and resilient solutions than desalination and wastewater recycling.</p> <p>I therefore object to wastewater recycling and desalination, not in principle, but until the above measures have been taken. Both are energy intensive and have environmental effects (the concentrated effluent/brine that they produce has to be released into the environment). We should not be pursuing energy-intensive processes where lower energy alternatives are possible. If used they should only run on renewable energy. Wastewater recycling plants also have a life of at most 60 years. Reservoirs can last forever.</p> <p>Havant Thicket Reservoir</p> <p>I absolutely object to recycled water being added to Havant Thicket Reservoir. Havant Thicket reservoir was intended and planned to be the first and only reservoir in the world fed by chalk streams which receive no sewage overflow or effluent. As such it would offer a unique habitat. Recycled wastewater will have a different chemistry and so should not be added. It also cannot be guaranteed to be clear of all contaminants (and in fact one point of the reservoir being used would be to act as a buffer in case of a treatment problem).</p> <p>Also the reservoir as originally planned (filling in the winter and supplying in the summer) would have reduced nitrate levels in Chichester Harbour - helping with the eutrophication problem we have and giving a benefit to local people. The change of use to recycled water, filling and supplying simultaneously all the time, means that the nitrate reduction will not happen. So one of the key local benefits is lost.</p> <p>I am also unhappy that it would be used as an environmental buffer. We do not want that reservoir used as a buffer in case of treatment problems.</p> <p>The reservoir is also a long way from where the water is needed (Southampton) meaning they need to pump the water a long way, and they need to pump 365 days a year 24/7 to keep the pipeline sweet. This is heavy energy use. If Southern Water want to store recycled water, to which I do not object in principle, they should build a reservoir close to where the water is needed.</p> | <p>tidal limit of the River Itchen. This is not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Desalination is an energy intensive process. However, the drawbacks of any option have to be considered in view of the benefits it delivers. We have excluded desalination options in cases where drawbacks outweigh benefits or where the environmental challenges cannot be satisfactorily overcome.</p> <p>The potential environmental impacts associated with desalination plants were a key reason for the desalination option in Southampton to be replaced. However, some of the environmental impacts are location dependent, there are cases where these impacts can be mitigated to acceptable levels. We have submitted a research proposal to the Ofwat Innovation fund to investigate ways to reduce the environmental impacts of desalination plants.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Regarding effects of recycled water on the chemistry of Havant Thicket reservoir, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |

| WRMP05    | Completed feedback form along with comment in Q10 "Focus on leak reduction and repair. V important for public perception"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for responding to Southern Water's Water Resource Management Plan consultation held between 11th September and 4th December 2024 and completing the feedback form.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP06    | <p>With respect to your plan to transfer recycled sewage water from [REDACTED] to the Havant Thicket Reservoir, this is objected to by many residents. Recent performance by water companies does not give residents confidence in the planned process especially as there have been recent incidences of e-coli in other water supplies. I am not sure what damage would be done to the reservoir water if there was an operational problem with the recycling. Have Southern Water with Portsmouth Water actually explored other approaches which would be more acceptable to residents.</p> <p>Increase extraction from the Havant springs. In 2008 the extraction license from Havant springs for Portsmouth Water was reduced by 16% by the Environment Agency. Hence the volume of extraction can be increased today by 16%. In fact the Lavant stream to the West of Langstone is at least 40cms higher all year round compared to 20 years ago. I appreciate that the local rivers need a minimum level of flow but in my 40 plus years living in Havant there has always be a steady flow. In fact the rain on the downs takes months to flow through the chalk to reach the springs and hence March rains arrive in the summer dry spells.</p> <p>Once the reservoir is full, spring water can be extracted to the maximum extent to supply customers, the reservoir is only needed when there is a shortage of spring water. The flow in the rivers/streams can be maintained close to the minimum flow level or replenished by recycled water. Portsmouth Water measure the various river/stream flows and must know how often over the last 30 years a minimum river flow level has been reached and be able to calculate the extra volume of water available if extraction is maximised.</p> <p>Replenish rivers with recycled water. If the recycled water planned to be pumped to the Havant Thicket reservoir is of a quality good enough for sourcing human use then it must be of a quality to discharge into the harbour. As mentioned above spring water can be extracted to the maximum extent North of [REDACTED] and then replenished slightly downstream with recycled water from [REDACTED]. Net affect on river/stream flow could be zero. In fact one pumping station could manage the extraction and replenishment. The Hermitage stream and other streams are underground or in concrete channels in many areas of Havant so clearly not an environment problem if there is a replenishment of water flows in these areas.</p> <p>Additional Water Sources. My understanding is that Portsmouth Water do not extract from all available springs. Is the Homewell spring used? Have Portsmouth Water ensured all available spring sources are being used. Are we maximising the use of all spring water sources. The water table in Havant is very high all year. This has been stated to me by the Environment Agency. Have you investigated the use of water bore holes. A few bore holes could increase the supply of water to the reservoir or into the main supply.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Regarding Homewell springs and springs across Havant and Bedhampton in general, they vary in size, some produce millions of litres a day, others just a steady trickle in high groundwater periods. However, for information, Homewell sits within the remit of Portsmouth Water and is not used for public water supply – it is relatively small with regards to flow, and the spring flows into a pond that is managed by Portsmouth Water for biodiversity purposes.</p> <p>Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). The Hampshire Water Transfer and Water Recycling Project (HWTWRP) scheme is designed to provide water resources during severe and extreme droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.</p> <p>A key benefit of Havant Thicket reservoir is the ability to store recycled water ahead of and during a drought.</p> <p>All water companies in England and Wales are required to plan for a drought of a 1-in-500 year severity. That is, available water is based on forecasts, not on historically observed values. This requirement is set by the government, not by water companies.</p> |

|           | Could there be better solutions than that currently planned. I would be interested in understanding what additional spring water volume could be extracted from current sources and from potential new sources, and whether this could remove the need for the use of recycled water in the water supply. Could the recycled water be used to replenish the extracted water in the rivers/streams.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP07    | Not related specifically to the publication of WRMP. A protocol statement that GARD intends to claim judicial review against Secretary of State for the reservoir in Abingdon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We recognise that GARD has expressed opposition to the reservoir and has indicated its intention to challenge the decision by way of judicial review against the Secretary of State. However, this consultation is focussed on Southern Water's WRMP which looks at a range of options for ensuring a secure and sustainable water supply for the future. We welcome all feedback on these options including any thoughts you may have on alternative solutions or potential impacts of different proposals. If you would like more information on the judicial review or GARD's position we recommend checking official sources such as the relevant governments departments or GARD's own communications.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP08    | <p>I've been following this company's attempt to persuade users and residents of Rowlands Castle where I live that filling the Havant Thicket reservoir with treated effluent is the best and only idea to stave off an anticipated drought.</p> <p>Firstly, when I receive updates it seems to suggest dates for the "plant" for reverse osmosis are being put back, as if it is a forgone conclusion. They should stop this as it's misleading. The plant that they wish to create is not very good for the environment in that it consumes a lot of energy and needs to run all day every day even though it apparently is only for use to supplement the reservoir levels in times of drought. Plus the chemicals employed in the process are not good for the environment. And at the end of the process the "waste" that isn't the cleaned effluent will be pumped out into the Solent - again this will be very bad for the environment and using the sea as a dumping ground for waste has been proven to be bad for the planet. No research has been undertaken into the effects of concentrated effluent being discharged into the sea just a small distance from our coast. If the cleaned water is sent to the reservoir it then has to be pumped many miles to Southampton - energy hungry and if it's needed there why not build a plant there?</p> <p>I suspect that the only reason SW want to build the plant is because of the tax breaks they'll get for capital investment whilst fixing existing pipework and sewage works is a revenue cost and not as effective for dividends and management bonuses.</p> <p>I'm very happy to pay more for my water as it is rather essential for life. And I don't want my grandchildren to inherit a planet that has been destroyed merely for profit. The water company owners are not altruists but are run for profit. This isn't incompatible but this consumer doesn't want to fill investor pockets whilst harming the environment and still leaving me with an expensive utility company that I can't change. My extra spend should go direct to the supply of clean water and not into management pockets.</p> <p>My fear is that in a few years time we will have another blood products, Teflon, post office, PPI, various drugs (eg thalidomide) question when we have the chance to prevent the inevitable from happening.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household</p> |

|           | <p>By all means consider fixing the leaking pipework system but don't pretend that a reduction of 50% by 2050 is a goal that should be admired. Make it 75% by 2030! And build more reservoirs. I appreciate that's not easy but just because it's difficult shouldn't mean it should be sent to the bottom of the list.</p> <p>With climate change we are more than likely to see considerably more rain in the future than we've been accustomed to. On the tv news a SW person stated that of the giga litres of rain that fall freely from the skies only a very small percentage (I recall 1% but could be mistaken) is captured. Separate grey from waste water so that less needs to be processed and thus there are fewer spillages into the water courses. Capture rainfall from our roofs for use in toilets and for household tasks that don't need drinking water quality. Fix leaking pipes! Create new canals to transport water from Wales and Scotland?</p> <p>Basically employ more thought than just fixing on an expensive and unnecessary process to clean effluent that is suitable for use in arid places like California or the Middle East not wet Britain.</p> | <p>and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This will also require the entire housing stock across our supply are to undergo modifications in internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level.</p> |
| WRMP09    | <p>Dear Defra and Southern Water,</p> <p>I note that Annex 12 and 13 are missing from the Technical Report download link.</p> <p>May I therefore ask please for such link or pdf copies of these sections in order that I may have all the prescribed 'consultation' material disclosure to enable me to 'have my say'.</p> <p>Error is unlikely. So, if these sections are in fact under some form of publication readership restriction (for whatever reason, and however access is being limited), then essentially the requisite full disclosure obligation has been compromised and an explanation is warranted. Other Annex sections refer the reader to these missing sections.</p> <p>Thank you in anticipation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable, we produced a non-technical summary document for those seeking a high-level understanding of our plan. You can view the publicly available documents on the link below:<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p>                                                 |
| WRMP10    | <p>I reside in Hayling Island (Havant), and am a customer of both Portsmouth Water and Southern Water. I would like to voice my concerns about the future planned activities of Southern Water.</p> <p>There is significant opposition to Southern Water's proposed use of the HTR given that Portsmouth Water's customers will then also receive the mixed water, and the Local Planning Authority consent for construction and operation is conditional on the reservoir being filled with 'raw water' sourced from the company's local chalk-fed freshwater springs. Permission was not</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>granted for treated effluent to go into the reservoir. In view of Southern Water's dismal record of disposing of effluent, I would no longer feel able to drink the water from the reservoir. Surely this would add to the mountain of plastic water bottles bought and then disposed of.</p> <p>I am also concerned about the significant impact associated with the concentrated reject water discharge into the Solent. Southern Water do not have a good reputation for large and regular discharges into Langstone and Chichester Harbours. I believe that no independent monitoring of the discharge into the reservoir is planned. This is beyond belief.</p> <p>It would also cause the loss of a biodiversity opportunity to create a chalk spring fed reservoir.</p> <p>This is a very expensive solution, at least £1.2 billion, with costs spiralling, making it hard to believe that it will provide best value for customers.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>A further consultation on water quality was held in 2025. This will include details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                |
| WRMP11    | <p>I am both a Portsmouth Water and Southern Water Customer.</p> <p>The latest Southern Water draft Water Resource Management Plan (WRMP) contains proposals that will affect all Portsmouth Water and Southern Water drinking water supply customers across Hampshire, the Isle of Wight and West Sussex. Alternatives such as new reservoirs and improved local water recycling, and moving abstraction points along rivers achieve the required goals for far less cost, are more environmentally sound and doesn't contaminate the springwater-fed Havant Thicket Reservoir.</p> <p>The volume of documentation presented with the consultation is immense, even so, some key documentation is withheld from public view, including the Options Appraisal document which should have addressed all environmentally sound and sustainable options, justifying the Company's preferred solution for future water supply, predominantly the high-tech recycling of effluent from a number of existing wastewater treatment plants - including Sandown (IoW), Littlehampton (■■■■) and Havant (■■■■■■■■■■) - using new controversial reverse-osmosis sewage filtering plant. Southern Water's previous strategic option, reverse osmosis desalination, at Ashlett Creek, near ■■■■■ (in 2021) was thrown out by public objections and the Environment Agency's guidance which recognised that it could not pass a Habitats Regulations Assessment.</p> <p>The new WRMP has further options in it, such as shipping-in water from Norway by tanker during a drought situation. This is hardly environmentally sound and will need even more specialist plant and pipework to be built, as well as lots of chemicals to treat the tanked-in water as it is highly acidic, before it can be mixed with ours. All this adds environmental risk and contamination exposure to our own supply and eco-system. This is clearly not feasible or acceptable.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with</p> |

|           | <p>Nothing in Southern Water's proposals mentions fixing the ailing pipework infrastructure. This would also go a huge way towards saving water. We have just had the wettest 12 months in England since 1836. This is water that should be saved, hence reservoirs. We don't need the sewage recycling plants, cross-county pipework and the associated increased environmental impacts and risks.</p> <p>Instead of reconsidering options based on the evolution of climate change rainfall predictions, the Company has not used the delay incurred by the scrapping of the desalination option. No lessons have been learned and the latest iteration of the WRMP continues the proposed use of the same reverse osmosis approach on a different source - effluent recycling. This is a single high risk energy-intensive high-tech option rather than spreading the future water supply over a broader set of more sustainable, environmentally-sound and lower cost options, presumably considered commercially unattractive given the current water industry funding model. Once built, the proposed plant has about a 30 year life expectancy and has to be run all day every day, consuming electricity and chemicals. A reservoir will still be fine in 100+ years.</p> <p>Thank you for reading this. Please consider and promote more sustainable options.</p> | <p>SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable, we produced a non-technical summary document for those seeking a high-level understanding of our plan. You can view the publicly available documents on the link below:<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the comments relating to sea tankering, we are no longer including this option in our plan.</p> <p>We aim to deliver net zero carbon by 2050 and we are expanding our carbon accounting processes to measure the impact of our capital delivery programme.</p> |
| WRMP12    | <p>Have you forgotten the Well at Harbour Farm, Bembridge? When this Well's use was discontinued, it was said that the quality of water was excellent and the quantities considerable.</p> <p>The pipe work exists to get the supply to the Sandown works, so it could be time to resurrect this supply source.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The source adjacent to Medway Estuary is located in the wetland associated with the mouth of the Eastern Yar, an area with multiple environmental designations, including SSSI, SPA and RAMSAR. As the Well has been out of commission for a lengthy period of time, we do not anticipate that the existing borehole would be useable and a re-drill would be required before abstraction could be restarted. This would be followed by pump tests and water quality sampling to confirm the viability of the water source. We believe the relevant regulatory permissions needed to achieve this would now be unlikely, given its location in such a sensitive environmental area. In addition, the trunk main needed to transport the water is currently decommissioned and if the site were to be brought back online, the PVC trunk main would likely need replacing due to age (and the predisposition of PVC to split/shatter with age). This work would present significant difficulty in proceeding due to the SSSI/SPA/Ramsar site. Although we believe this would be a very challenging site to recommission, we do regularly review decommissioned sites.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| WRMP13    | <p>In regards to your wish to mix treated effluent water with spring water in the new reservoir at Havant thicket, I wish to make it known that I WHOLLY AND ENTIRELY DISAPPROVE OF THIS PLAN.</p> <p>Southern Water have a blatant and flagrant disregard for the impact of their day to day operations on the community, they have been proven being any doubt to be incapable of carrying out their duties as a caretaker for our vital public services.</p> <p>They have caused, and continue to cause huge environmental damage to the community and waters around Hayling Island with their dumping of untreated effluents into the local harbours, affecting all the local wildlife and impacting the community as a whole.</p> <p>They have proven to be wholly unsuitable to discharge their duties in a manner befitting their responsibility, they have neglected their duties to maintain the water supply network correctly, choosing instead to cause the network to fall into disrepair so that their shareholders are allowed to benefit, whilst the community are looked to to make up the enormous financial shortfall caused by their poor business practices.</p> <p>This company should be brought to book, and be removed from the position for which they clearly have contempt. It is a national, and international disgrace that their poor practice has been allowed to carry on for this long, they are not fit for duty, and clearly cannot be trusted with our vital resources.</p> <p>No more, no longer can I countenance their disgraceful and disgusting behaviour.</p> <p>Resident Hayling Island.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> |
| WRMP14    | <p>I am writing to object strongly to the recycling of effluent into drinking water. I cannot see any need to do this aside from increasing profits for the private company that runs the water company.</p> <p>There is more than enough rainfall here in the South of the UK to maintain the required level of water in a suitable reservoir. The forecast is for rainfall to increase with global warming.</p> <p>Please register my strong objection to this proposal</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Factors that are considered during the options appraisal process include cost, volume of water produced, resilience to climate change, the environmental impact etc. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p>                                                                                                                                                                                                                                                                                                                                                                                                   |

|           |                                                                                                                                                                                                                                                                                                                                                                           | <p>Regarding rainfall capture, we have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage).</p> <p>Your objection to the use of recycled water in Havant Thicket has been noted.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| WRMP15    | <p>I am very concerned and anxious about drinking recycled water.</p> <p>Southern water has a terrible record with sewage.</p> <p>Also with spending money effectively and rewarding poor performance with bonuses.</p> <p>The environmental impact of this Reservoir is huge and unprecedented and not researched or consulted correctly</p> <p>Please stop this now</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | mitigations. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP16    | <p>Dear DEFRA</p> <p>I would like to lodge my objections to the Southern Water proposals to use recycled sewage water as a way of topping up the Havant thicket reservoir. My objections are as follows:</p> <ol style="list-style-type: none"> <li>1. The recycling plant would be built on reclaimed land which is liable to be unstable and likely to release pollutants as it will be built on an old waste dump.</li> <li>2. The 40 km pipeline will consume a lot of energy in construction and over its lifetime. This long distance movement is not necessary with more local solutions.</li> <li>3. Climate change means we have a lot of winter rainfall which could be captured and used during the rest of the year. This would be possible with better use of boreholes, underground storage and even more reservoirs.</li> <li>4. Southern water should follow up on their vague plans to have water abstraction closer to the title limits of rivers in the area.</li> <li>5. The effect on Langstone Harbour of the release of the concentrated residue from reverse osmosis has not been adequately researched.</li> <li>6. The £1.2 billion costs of this project do not offer value for money as compared to other solutions.</li> <li>7. The population projections for the area are in all likelihood too high with the fertility rate having fallen again to 1.45 per female in England.</li> </ol> <p>These of some of the many reasons why I hope you refuse Southern Water permission for this unnecessary and expensive project.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Building on former landfill sites is not unusual. When done with proper management and compliance with regulations and ensuring environmental safeguards are in place building on former landfill sites is both feasible and safe and is increasingly an important tool in sustainable development,</p> <p>Southern Water has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill, including in respect of piling down to chalk. Works interacting with the landfill are expected to require an environmental permit, which provides an additional layer of protection and control in relation to those works.</p> <p>We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main report to the statement of response.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. At local scale, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |

|           |          | <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>On climate change, climate change is pivotal to much of the work we are doing. As stated in the Government's policy paper Water abstraction plan: Environment - GOV.UK "A changing climate is likely to bring greater variability in rainfall and higher temperatures. We expect less groundwater recharge and larger seasonal variations in river flow as well as changes to when and how extended dry periods occur. Sustainably abstracted water bodies will be more resilient to changes in climate and drought pressures so addressing unsustainable abstraction will help improve resilience to climate change."</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning</p> |

                                                                                                                                                                                                                                                                                                                                                               |
| WRMP17    | I strongly object to recycled water being put into the new reservoir.<br>There is sufficient water in the chalk aquifers currently supplying Portsmouth with water to negate any need for recycling waste water, which can be safely discharged after processing into the sea.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Thank you for reviewing our rdWRMP24 and providing feedback.<br><br>Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). The Havant Water Recycling Treatment Plant (HWTWRP) scheme is designed to provide water resources during severe and extreme droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP18    | Dear DEFRA,<br>I am writing to object very strongly to Southern Water's latest water resources management plan. The plan does not support smaller, more natural and more sustainable options and instead seems intent on promoting the giant sewage recycling scheme and pipeline. Please don't allow this highly technical one off proposal to proceed while Southern Water have not fully explored or explained to its customers the implications and risks involved. There are many other smaller projects that should be explored first - while they might not individually be the flashy single solution that Southern Water apparently prefers, they would provide greater diversity and flexibility to respond to both the changing climate and the changing needs of the population and the environment, while creating less irreversible damage from the outset.<br>Climate change modelling suggests we will have wetter winters and drier summers in future. To protect our rivers we should be moving abstractions points so the bottom of the catchments and preparing to collect water during the wet winters and store it for use when needed. Southern Water is instead planning not to change abstraction and to create additional water via a chemical, energy and carbon needy infrastructure which will have to operate all the time despite the stated intention for it to be a drought resource. This will have a larger than necessary environmental impact and just pushes many problems into the future beyond the scope of Southern Water's current profit concerns.<br>Southern Water has not completed a full review of the plan considering all alternative options as "a full re-appraisal exercise was not considered time or cost beneficial" (Annex 20, page 3) - please do not permit this lack of care for the environment and future generations to stand - we need greater sustainability than the current plan has adequately considered.<br>Furthermore, while they plan to pursue the effluent recycling option which will inevitably take time (and which will most probably take longer than is predicted by the plan given that it is new technology) they want to continue with practices (under the Candover drought option) known to be harmful to the local environment and are even asking that these be permitted for longer than the current deadline for them to cease. This can't be allowed to continue and ending their use should be a priority.<br>The plan which Southern Water has put forward seems to be an attempt to rationalise a preferred choice that is being driven by what will be most profitable. Why are predictions of population growth so pessimistic (growth forecasts of population for the period 2025 to 2050 that are even higher than in the last draft plan (page 82), even though the industry regulator | Thank you for reviewing our rdWRMP24 and providing feedback.<br><br>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plants can be built in a modular fashion, i.e., a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change, and delivering Environmental Destination.<br><br>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment, supporting wildlife, particularly in a drought. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Climate change modelling suggests we will have wetter winters and drier summers in the future.<br><br>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.<br><br>Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023), regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise that informed Annex 20, which was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience options was |

|           | <p>Ofwat has confirmed they can use the much lower Office of National Statistics (ONS-18) population growth, the figures which most closely aligns with the core strategy in the Ofwat guidance (page 118)? It appears that Southern Water are trying to argue that only the enormous effluent recycling plan will be big enough to solve the problems they predict so they should be allowed to build it - possibly because the previous plan was rejected for not being cost effective.</p> <p>Please reject this plan too and send Southern Water a clear message that they must do better.</p> | <p>that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost-beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation, we reviewed at a high level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our rdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>It is our desire to avoid the use of drought options and become more drought resilient. We are working on this and making significant investments to reduce our need for the Candover/Test/Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g., the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>Reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>For dWRMP24, we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwelling occupancy, population in commercial properties, and business counts. Following the publication of the latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS, and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report).</p> |
| WRMP19    | <p>Dear Sir</p> <p>Southern Water has submitted a revised water resources plan, which includes the provision of effluent delivery schemes and this is now out for public consultation.</p>                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------- |           | <p>I am writing to strongly object to this latest proposal. I am not an expert in the field and I accept that some of my statements and views may be erroneous. I am aware that my local MP is supportive of my concerns and I have cced him into this email.</p> <p>All the issues are carefully detailed on the Website <a href="https://havantmatters.org/">https://havantmatters.org/</a></p> <p>Below however are my own views, influenced by a friend who has spent his lifetime working in a senior position in the water industry.</p> <p>Current situation, as understood by local residents</p> <p>Under the current approval for Havant Thicket Reservoir, which I supported, water from a various bore holes and springs at Bedhampton and Havant will be used to supply the reservoir. There is currently a surplus of this water, such that at present, 50% of this spring water naturally flows into the sea, and this will of course be obviated under the current approved plan. The reservoir will hold approximately 8.7 billion litres of water.</p> <p>Southern Water has a water shortage in the Southampton area and over extracts water from rivers Test and Itchen. It sees the Havant Thicket Reservoir as the answer and wants to add recycled sewerage water at this second development stage.</p> <p>The WT&amp;WR Project Proposal</p> <p>Under this proposal, the reservoir will receive recycled effluent 365 days/year. Southern Water proposes a large treatment plant, five pumping stations with three pipelines (including a 45km pipeline to get the water to the treatment works at [REDACTED]).</p> <p>The new treatment plant will be built on a landfill site at Havant. It will operate using reverse osmosis which is energy intensive. The water will then be piped into the reservoir. I am doubtful that this process will remove all contaminants particularly the noxious polyfluoroalkyl substances and the performance of Southern Water of late, does not fill me with confidence over any assurances that they may give to the contrary.</p> <p>The overall project cost of the second stage is estimated to be £1.2 billion. I would expect this figure to rise and to be a significant additional cost, paid for from Southern Water bills. The extent of possible price rises was recently revealed in draft proposals by the regulator. I do not object to my bills going up, so long as they money is being spent wisely.</p> <p>Outcome - Environmental</p> <p>At the new treatment plant rejected water will be piped into the sea. So, more sewerage flowing into the sea, which is unacceptable now and with a further impact on environment and marine ecology.</p> <p>Pollution and environmental impact caused by the energy needed to operate new treatment plant.</p> <p>Approx 30 million litres will be pumped per day. There will be a huge environmental impact on doing this.</p> <p>Under the current approved project, there is a unique biodiversity opportunity to create a chalk spring water fed reservoir – this will be lost and there will be an adverse impact on biodiversity net gain.</p> <p>Outcome - Financial</p> <p>The project cost of this is enormous and it is not the best way to spend money (see alternatives below).</p> <p>There will be a huge operational cost for operating the new treatment plant plus the pumping costs.</p> | <p>Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This will also require the entire housing stock across our supply are to undergo modifications in internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment.</p> |

|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>Southern Water majority shareholder is Macquarie (Australian investment). Portsmouth Water is owned by Ancala LLP who have a number of ex-Macquarie partners. I think that project is being driven by the search for profit as opposed to finding solutions that are more effective but less profitable. It is not the best use of funds.</p> <p>Outcome - Customers</p> <p>Portsmouth Water customers have a surplus of high-quality natural water. They do not have to accept Southern Water adding recycled sewage into their supply.</p> <p>Solutions</p> <p>These are more sustainable alternatives that give less environment and countryside disruption. Spend the money on the following:-</p> <p>Let Havant Thicket Reservoir fill naturally from the spring water - allow the time to do this.</p> <p>Store water in aquifers or new reservoirs close to Southampton. Aquifer storage is used in the USA and there has been a successful trial in the UK.</p> <p>There are other sewage works closer to the Southampton region, requiring much shorter pipelines, and less use of energy and carbon to get the water to where it is needed</p> <p>Southern Water loses approx. 108 million litres per day through leakage – spend the money fixing this core problem. If leakage halved, then it would be a substantial amount of the water proposed to be supplied by the WT&amp;WR Project. Furthermore, the water mains renewal rate is around 0.5% per year, meaning that a main designed to last 100-120 years is expected to last for about 1000 years. Invest money in mains replacement to further reduce leakage.</p> <p>Develop alternative solutions ('grey water') to supply large water users such as golf courses and agriculture.</p> <p>Conclusion</p> <p>The WT&amp;WR Project is unpopular locally, unsustainable, carbon and energy hungry, and a very expensive scheme.</p> <p>I strongly object.</p> | <p>SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill.</p> <p>Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a>. It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> |
| WRMP20    | <p>To whom it may concern</p> <p>In short I strongly object to the proposal by Southern Water to use the Havant Reservoir as part of the Hampshire effluent recycling scheme (using Havant Thicket Reservoir as an environmental buffer).</p> <p>DEFRA rejected the previous Southern Water draft WRMP in 2023 following public objections and concerns expressed by regulators. It is very disappointing that the Company has not taken the opportunity to start again, undertake a more realistic review of the water resources position going forward, and a more robust evaluation of potential solutions to bring forward a more sustainable plan.</p> <p>This does not provide 'best value' for customers or the environment, when more sustainable schemes could be brought forward as part of the plan. The plan provides 'best value' for profit generation and shareholders; with customers (and consumers) and the environmental footprint / impact being secondary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>DEFRA rejected the previous Southern Water draft WRMP in 2023 following public objections and concerns expressed by regulators. Southern Water has since revised its proposal, and using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the</p>                                                                                                                                                                                                                                                                                                                                                       |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>As a local resident and customer, only a couple of miles from the current development, I am disappointed that Southern Water's proposal has been modified to treat effluent in this way, away from the original fresh water reservoir the local community was sold. On top of this Southern Water are increasing our bills.</p> <p>Southern Water have a poor track record when it comes to waste water management; and yet the proposal is for them to use the very water being stored for consumption. The investment would be better spent on the managing and maintaining their existing infrastructure.</p> | <p>landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make, and various Price Control Deliverables set by Ofwat ensure that poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year, this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector: <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a>. It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, to each of our customers. This would also require the entire housing stock across our supply area to undergo modifications in</p> |

We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. However, we will continue to revisit and review the potential wider use of both MAR and ASR again within future resource planning.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP21    | <p>Dear Sirs, Whatever happened to the proposed reservoir to be built at Warnham near Horsham, West Sussex. For at least the last 30 years this proposal has rumbled in the background before no longer being discussed. In view of the considerable numbers of new housing developments in the area and increasing pressures on water in this area, why has this project been abandoned?. The River Arun cannot support a further increase in the amount of water being taken from it, without serious damage to the local environment, particularly to the Wild Brooks RSPB at Pulborough. I cannot see how a new reservoir in Havant will be of benefit to Horsham district, which is under great strain at present.</p> <p>I would be grateful for your comments on this matter.</p> <p>Yours faithfully</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third in Sussex (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP22    | <p>Hi,</p> <p>I object to your Southern Water WRMP.</p> <p>How can you object to, and refuse to consider the cheaper and more environmentally alternative.</p> <p>I agreed to the Havant Reservoir and attended several meetings.</p> <p>At no time was "Recycled Sewage" raised as a supply of water.</p> <p>We are not a third world Country. We do have a reasonable amount of rain. We have never had standpipes!</p> <p>Why can't you draw water from the protected Chalk Streams but nearer the Sea.?</p> <p>You should have a rethink and go for the Cheaper Option which is also more Environmentally Friendly.</p> <p>Regards</p>                                                                                                                                                                       | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="#">here</a>.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators, and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> |
| WRMP23    | Dear Sir/Madam,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>I am very concerned regarding Southern Water's revised draft WRMP and it is a plan as a local resident I do protest.</p> <p>The plan does not strive to work with predicted changes to our climate to capture more winter rain for use in dry summers. Rainwater provides a good quality free raw water resource and we need to prioritise schemes that capture and store it for dry summers.</p> <p>SW Preliminary Environmental Information Report (2024) confirmed a likely significant effect on the marine environment from the Hampshire effluent recycling scheme. Modelling for water quality impacts on the reservoir is still not available. The scheme should not move forward until the environmental risks/impacts are known.</p> <p>We get plenty of rain in winter, Southern Water should be developing solutions which store that free natural water for use in dry summers.</p> <p>Not a sustainable solution, especially building it more than 40km from where the recycled water is needed. The treatment &amp; energy costs to transport the water 365 days a year will be huge.</p> <p>It risks turning people away from tap water due to the lack of trust in the water companies, creating a new used plastic water bottle mountain, especially as mixed reservoir water will taste different to spring water.</p> <p>Significant additional risk of pollution from the recycling plant, especially if it is not maintained properly by Southern Water. No independent monitoring of the discharge into the reservoir is planned.</p> <p>SW waste more than 92 million litres of treated water per day to leakage. SW also have a shocking performance on mains renewal, expecting water mains to last 1000 years. More challenging targets on leakage &amp; mains renewal need to be set and delivered urgently. Reducing leakage by 50% in 2050 is just not good enough</p> <p>This is a plan that is simply good enough. I don't trust Southern Water, this plan shouldn't be allowed and I want it abandoned.</p> <p>regards,</p> | <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short, sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year, this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector: <a href="https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector">https://www.ofwat.gov.uk/publication/pr24-final-determinations-roadmap-for-enhancing-asset-health-understanding-in-the-water-sector</a>. It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p> <p>The majority of the pipelines will be installed using trenches across farmland. In other locations, such as populated areas or where there are particularly sensitive environmental constraints, trenchless techniques will be used. Installation of the pipelines would be controlled by various management plans, including a Construction Environmental Management Plan.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. Regarding effects of recycled water on the chemistry of Havant Thicket reservoir, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>Reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP24    | <p>I am a customer of Portsmouth Water (water supply) and Southern Water (sewage processing). I object to Southern Water's WRMP on the grounds that it will result in a lower quality water supply.</p> <p>Portsmouth Water supply today is spring water requiring the minimum of processing, resulting in tap water quality which is among the best in the country. If Southern Water's WRMP is implemented, my supply will include recycled water, which may well meet minimum standards, but will not meet the standard of quality that I get today.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink.</p> <p>We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP25    | <p>I strongly oppose this, the residents of Havant were sold this proposal many years ago by an untruthful Portsmouth Water and Southern Water. We were told this reservoir would be filled with pure spring water, it would offer leisure facilities etc. All lies.</p> <p>These two companies conspired with each other to hoodwink the residents and have changed their plans substantially. We do NOT consent to this plan. Go back and start again.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP26    | <p>Dear Sirs,</p> <p>I do feel that I need to respond to the Southern Water proposal at Havant Thicket.</p> <p>I am afraid, very sadly, that no one in their right mind trusts Southern Water, their activities are solely profit driven and in common with a lot of the water industry they are not in a good financial situation. On that basis this proposal is purely profit driven, to think that it is for the benefit of the consumers is taking a rather naive attitude.</p> <p>The first thing I tried to do was to try to find out how much water is leaked from Southern Water fresh water distribution system. I am fairly good at finding things out on the internet - could I find anything, the answer is a big NO.</p> <p>Beneath the facade that they are trying to create, in my personal view they are not a honest company and on that basis I do not think that this project should go ahead, and instead they should be directing all their energies to fixing the leaks in their fresh water distribution system and maintaining their infrastructure properly.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>The leakage reduction target set by the Government is 50% by 2050. we are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can</p> |

We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. Should you wish to see our 2023-24 leakage performance it is available in <a href="#">southern-water-annual-report-2023-24.pdf</a> on page 47.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP27    | <p>Dear Sir/Madam,</p> <p>Why turning our sewage into Tap Water won't solve the drinking water problem.</p> <p>There have been many years of research undertaken into this subject and as recently as April 2023 researchers have found that contaminants like microplastics and formaldehyde remain in the water even after highly advanced treatment.</p> <p>These contaminants are linked to cancer, metabolic problems, heart disease, and more. Many of these toxins, including PFAS forever chemicals, are notoriously difficult to remove. Researchers have found that in addition to PFAS, contaminants like microplastics and formaldehyde remain in the water even after advanced treatment. These contaminants are linked to cancer, metabolic problems, heart disease, and more.</p> <p>It's impossible to monitor every potential toxin in a direct potable reuse system. For what toxins we do know about, many are unregulated, and we don't know how they affect human health with low-level, long-term exposure. Moreover, many chemicals become even more dangerous when they interact with each other. To make matters worse, these toxic chemicals can accumulate in the water over time. In direct potable reuse, the water cycles from drain to tap, over and over again, with no environmental buffer to dilute them.</p> <p>Toilet-to-Tap Projects Have Serious Environmental Problems</p> <p>Direct potable reuse projects often do more harm than good to the environment. While toilet-to-tap, along with other reuse schemes, is sometimes called water "recycling," it isn't as green as that label would suggest.</p> <p>The advanced treatment systems that make reuse possible use a lot of energy. If they're powered by fossil fuels on the grid, that means they also have a higher carbon footprint than regular water treatment.</p> <p>They're also bad for marine life. The treatment process creates toxic waste brines, which contain PFAS and other dangerous chemicals. Coastal municipalities often get rid of their brines for cheap by dumping them into the ocean, which can disrupt ecosystems and poison wildlife.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our supply area is classed as being under 'serious water stress' by the Environment Agency. Please see <a href="https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK">https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2F60dd7f328fa8f50ab1d0128a%2FWater_stressed_areas_final_classification_2021.odt&amp;wdOrigin=BROWSELINK</a></p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Owat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Owat also regulates the amount of profit that water companies can make,</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>Meanwhile, in inland areas, toilet-to-tap projects can disrupt natural river flows. They take water in but don't return it to waterways, which would lower water levels in vital rivers and streams. We've already seen what happens when these levels fall, thanks to the drought in the West. Downstream communities get less water, rivers dry up even if they have legal rights to the water source.</p> <p>Our water crisis isn't just an environmental problem; it's an equity problem. Already, millions of people in the U.S. can't afford their water bills.</p> <p>Direct potable reuse will worsen this problem, as utilities raise rates to cover the new technology. For example, in Nevada USA, direct potable reuse can cost up to 6.5 times higher than indirect potable reuse. Low-income households will struggle disproportionately to afford water.</p> <p>At the same time, water companies have been abusing our river water with impunity. Every year, they've downed billions of gallons of raw sewerage all to expand their profits.</p> <p>Not only are direct potable reuse projects risky — they distract us from the real solutions to our water problems. Governments should not be banking on toilet-to-tap and saddling low-income families with the bill. Instead, they must become better stewards of our existing water sources and rein in wasteful corporate water abusers.</p> <p>Unfortunately for us all the Water Companies will continue to ignore these scientific facts in order to advance their profit at the expense of us all. Eventually when governments find that people are dying due to their disregard of these facts will the water companies be forced to do what we are all paying for, clean healthy drinking water.</p>                                                                                                                     | <p>which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WRMP28    | <p>Dear Sir,</p> <p>I understand there is an unsavoury plan to pump treated recycled sewage into the Havant Thicket reservoir instead of the original plan to collect excess pure rain water for the Portsmouth Water area. What are they thinking? This will not work as after many years of operation as the water purifying plant will develop faults and operator error will occur to destroy the purity of the reservoir's water. Being a retired engineer I guarantee this will happen someday whatever the 'experts' say and what will that cost to correct every time? People don't need or want that.</p> <p>Also the incredibly expensive plan of laying a 40km pipeline from the reservoir to [REDACTED] and to pump water at an apparent estimated energy cost of £3,000,000 every year has to be the craziest of solutions with yet another pipe to leak after 100 years. Apparently this system might not even start up until 2035 – which is crazy as well as being a phenomenally overpriced, 'high carbon' way of doing things. This thinking has apparently has not helped for many years, delaying the commencement of work on our locally needed reservoir until now.</p> <p>Southern Water really need to rethink this very expensive out-of-area idea altogether and keep it local to Southampton. I also understand they are even contemplating funding water from Norway! That means another inexplicable huge carbon and energy cost.</p> <p>As I see it, as soon as possible, they should stop continually extracting water from the upper reaches of rivers and take it from as far downstream as possible where they will get the same quantity of water and save our precious chalk streams during the dry seasons. They could also use aquifers local to the Southampton area to collect clean excess rain water and even create a local reservoir too. This apparently</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. However, we will continue to revisit and review the potential wider use of both MAR and ASR again within future resource planning.</p> <p>Regarding the environmental impacts of sea tankering, this is no longer included in our plan.</p> |

| WRMP29    | <p>Dear Sir or Madam,</p> <p>I am concerned about the effluent recycling planned and its involvement of the Havant Thicket reservoir. We were told of all the benefits of this reservoir and why cutting down ancient woodland was worthwhile. Now we discover that the reservoir will not be the clean environment for nature and leisure we were promised but a tank to mix water from aquifers with recycled effluent.</p> <p>It strikes me that it is a very expensive option that will do a lot of harm in all sorts of ways. However much filtering you do, you can never filter out medicines and dog flea treatments. To protect the chalk streams, I think extraction down river is perfectly feasible. I also think we should be working on the technology to use aquifers for storage.</p> <p>There is much more Southern Water could do to fix the pipes and reduce wastage. This needs to be tackled first.</p> <p>Certainly the idea of bringing water from Norway as a stopgap is far too expensive. We have plenty of rain, we just need to gather it, store it and use it efficiently.</p> <p>I ask you to reject the current plans and have Southern Water rethink and then to consult fully and transparently.</p> <p>Kind regards</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website:<br/> <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. However, we will continue to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in</p> |

| WRMP30    | <p>Hello</p> <p>I am writing to object to your revised draft water resources management plan, I do not see the benefit outweighing the risks/environmental damage and cost.</p> <p>Tankering water from Norway in a drought can not be accepted as a credible drought plan and the environmental concerns with this should not be discounted.</p> <p>Spirally costs program delays and significant environment effects and the need to operate 365 days a year cannot make this the best value for customers</p> <p>Assurances by southern water that water quality modelling and energy use information for the Hampshire effluent recycling scheme would be available in time for the 2024 consultation have not been met. There has been a real lack of customer engagement or consultation</p> <p>For these reasons and many more I oppose these plans</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the environmental impacts and financial costs of sea tankering, this is no longer included in our plan.</p> <p>As part of our role to protect and enhance the environment, we are committed to reducing carbon. You can find out more about our carbon policy here:<br/> <a href="https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/">https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/</a><br/> We aim to deliver net zero carbon by 2050 and we are expanding our carbon accounting processes to measure the impact of our capital delivery programme.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. We have received 1176 responses as part of rdWRMP24 consultation. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>We made clear in our Summer 2024 Consultation for the Hampshire Water Transfer and Water Recycling Project that water quality modelling and assessment work was ongoing and would be fully reported in our Development Consent Order application. As that work has progressed, we are now consulting on it as part of our Spring 2025 Consultation.</p> <p>As part of our Summer 2024 Consultation, we shared our preliminary assessment of carbon emissions associated with the Hampshire Water Transfer and Water Recycling Project. This was based, in part, on energy usage information for the project. An updated carbon emissions assessment will be provided as part of our Development Consent Order</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | application. The energy usage information used to support that will be appended to the assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| WRMP31    | <p>This email is by way of an OBJECTION to and comment upon Southern Water draft Management Plan (2024) during the CONSULTATION period- to build new infrastructure to recycle treated effluent into the water supply by additional treatment, movement and storage infrastructure.</p> <ul style="list-style-type: none"> <li>The process to agree that the proposals, within the plan, are a national infrastructure project to be considered by DEFRA is abusive to local engagement and consultation and has disadvantaged local communities in considering the issues and future options</li> <li>Southern Water has not undertaken sufficient local publicity, engagement and explanation of the proposals and the evidence upon which they may be based to ensure that the proposals are necessary and that they represent the best value against sound scientific evidence , cost benefit analysis and respect for the environmental</li> <li>The revised draft plan presents as a single objective (recycling effluent into the water supply via a new infrastructure) with a just single alternative proposal to transport water from Europe to the UK- clearly not chosen for its comparable features.</li> <li>Within the plan there is no broad process to identify a range of possible future investments to ensure adequate and safe water supplies and management of waste; and consequently there is no sound and evidenced based cost benefit analysis nor a comparison with feasible alternative ways forward.</li> <li>The population estimates for the area do not appear to align with those within the National Census material and bring into doubt the need for the proposal set out; and consequently, it is difficult to evaluate the need for and cost effectiveness of the proposals.</li> <li>Southern Water leads the recently published bids (by a big margin) for consumer price increases at over 40% over the next 5 years and yet continues to manage an infrastructure that wastes 19 % of its treated water annually. The draft plan does not address this in the context of a bid for additional infrastructure funding.</li> <li>The policy to allow water companies to make profit from future infrastructure projects whilst not enforcing that existing infrastructure is properly maintained is a perverse incentive and counter-productive to best outcomes for consumers and the environment.</li> <li>In that there are no alternatives presented within the plan it is not possible to evaluate if alternatives might be more cost effective, more quickly delivered and have a more sustainable carbon footprint. These alternatives include additional reservoirs , rain water run off collection schemes, better river abstraction management, existing or new aquifer storage sites and better</li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our consultation involved 8 roadshows throughout our supply area. Here consultees could visit and speak to the team directly. We also undertook 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation. All of these activities were publicised on our website and on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information. We fulfilled the expectations from planning guidance regarding our visibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwelling occupancy, population in commercial properties and business counts. Following the publication of the latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered for each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in</p> |

|           | <p>management of existing infrastructure - all of which are operating in many Countries and therefor evidence is available to evaluate alongside the current effluent recycling, movement and storage proposal.</p> <ul style="list-style-type: none"> <li>The proposal to build new and additional water pipe networks, and water treatment plants are potentially expensive to build, maintain and run - but these features also have a short life span: apparently 60 yrs., many of the alternative (including but not limited to those above) have longer life utility and potentially are cheaper to develop and maintain; and are potentially more environmentally friendly</li> <li>The Souther Water proposal contains a significant aggressive carbon footprint to create the new infrastructure and also to run it (for 60 years) , which is unlikely to be achievable within the Government target to be carbon neutral in energy production by 2030. The energy cost alone to run the proposed pumping network are considerable and will further add to the pressures on consumer bills.</li> <li>The proposal includes building a new water plant on a former land fill site with discharge into a natural Harbour: The risks of contamination as the new plant requires disturbing the land fill site are not fully identified nor addressed by sound science, construction methods and risk management</li> <li>The proposal includes pumping treated effluent into a natural source storage reservoir under construction locally (Havant Thicket) but also over 40km of new pipe work to move treated effluent to another storage site near Winchester - which includes water abstracted from the Rivers Itchen and Test. If local support might be obtained for recycling effluent into the treated water system, it seems very unlikely that pumping huge quantities of recycled water over 40km would be an environmentally sustainable and cost-effective solution.</li> </ul> | <p>this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> |
| WRMP32    | <p>I am writing to express my concerns about the Southern Water Draft Water Resources Management Plan for the following reasons:</p> <ul style="list-style-type: none"> <li>* There appears to be no viable alternative solution to the problem of the disposal of the final effluent from the sewage works, should the proposed site be insufficient or fail. This could have a devastating impact upon the environment.</li> <li>* The idea of importing water from Norway is environmentally poor and surely unnecessary in a country that receives excessive amounts of annual rain.</li> <li>* As a matter of urgency, plans must be made for the localised storage of our excessive rainfall to be used in times of drought.</li> <li>* This plan does not set out the best use of our money in terms of caring for our environment in a sustainable manner.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts, and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plants can be built in a modular fashion, i.e., a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms of being able to meet the anticipated demand, resilience to climate change, and delivering Environmental Destination.</p>                                                                                                                |

|           | <p>* We need a far more in depth set of alternatives to this plan that are fully costed and take into account the potential impact upon our environment, utilising realistic data for future needs and usage.</p> <p>* This plan is far too short sighted and short term. We need a longer term, well costed plan with sensible timescales, alternatives and a sense of vision that it will improve lives.</p> <p>Thank you for your consideration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Regarding the environmental impacts of sea tankering, this option is no longer included in our plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WRMP33    | <p>Dear Sir,<br/>I object to the proposed Effluent Processing facility in Havant as a solution to potable water shortages in the Hampshire and West Sussex areas.</p> <p>I appreciate that fresh Water Supply in this country has always presented challenges due to the archaic infrastructure that loses a significant percentage of available water due to leakage. Climate change now adds to the difficulties by probably reducing rainfall in our summer months. So I was pleased to hear that a new reservoir was approved for construction at Havant Thicket to catch fresh and store spring water for use in draught periods.</p> <p>I'm now horrified to learn that, if current proposals go ahead, that as a Portsmouth Water Co customer, I could receive water that is a mixture of pure and processed Effluent Sourced Water from a Southern Water Co proposed effluent recycling facility in Havant</p> <p>The effluent being processed would include domestic and industrial waste containing all manner of chemicals and bacteria. Apparently filtration / UV radiation is expected to make the water 'clean'. I'm do not see how a guarantee can be made for removal of all chemical contaminants which might from time to time be present.</p> <p>Also preventive maintenance cannot 100% prevent all equipment failures. When a failure occurs contaminants could escape capture. Any contaminant not detected would pollute the reservoir making its contents unsafe. My understanding is that there is no commitment in the proposal to have the reservoir's 'effluent input' independently monitored to protect the reservoir and down stream water users</p> <p>My preference would be to see a broader solution based upon increased water collection/storage in the wet winter months by further strategically positioned reservoir construction. Together with investment to refurbish the water distribution system to significantly reduce the wastage due to network leakage.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals, and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities, including "forever chemicals," in the purified recycled water produced. Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period</p> |
| WRMP34    | <p>Good morning<br/>Your inability to provide water for us to swim in does not bode well when considering your ridiculous notion that we should drink recycled sewage<br/>You have shown yourselves to be incompetent and self serving<br/>You are a disgrace</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink.</p> <p>We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| WRMP35    | <p>Hi,</p> <p>I am very concerned about Southern Waters plans to pump 30ml of partially treated sewage into the new Havant reservoir.</p> <p>Planning says the reservoir must be filled with raw water from a chalk fed fresh water springs, so this is clearly a breach of planning.</p> <p>Also effluent recycling using reverse osmosis hasn't been used in the UK before on drinking water so we don't know that it is safe to drink .</p> <p>Also what happens if the treatment fails for some reason resulting in raw sewage being pumped into the reservoir?</p> <p>Can I please urge you to stop the pumping of partially treated sewage I to the new reservoir.</p> <p>Many thanks</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals, and other impurities from water to create purified recycled water.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators, and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> |
| WRMP36    | <p>I would like to object to Southern Water using the Havant Thicket Reservoir to siphon treated effluent into the system. As this is an unknown, scientific experiment on not only residents, but the environment. There are very, rare sensitive chalk aquifers underground, which sustain very rare flora and fauna. Interfering with such a sensitive ecosystem is very wrong and damaging.</p>                                                                                                                                                                                                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>I am aware that DEFRA has rejected the previous SW draft WRMP and it is disappointing that the company has not revised their plans. An opportunity to do a more realistic review of water resources and evaluate possible solutions was missed.</p> <p>To operate the opposed schemes comes with a huge carbon footprint and energy costs of £ 3 million just for the Hampshire scheme. There are alternative solutions. Why are they not considered?</p> <p>My concerns regarding the SW draft plan are the following:</p> <ol style="list-style-type: none"> <li>1.The plan does not seem to work with the predicted changes of climate change for our environment. There is plenty of rain water in the winter and it needs to be captured and stored for the summer.</li> <li>2. SW have not completed a full review of the plan considering all alternative options. This is essential before more damage to our environment is done.</li> <li>3. Sustainable options have not been prioritised.</li> <li>4.The time scale is unrealistic.</li> <li>5. SW should not be allowed to rely on use of the Candover drought option, Lower Itchen and Test drought orders.</li> <li>6. Tinkering water from Norway in a draught cannot be accepted as a credible drought plan</li> <li>7. Discrepancies in the prediction of population growth.</li> <li>8. SW lose 100 mill lites of water per day through leaks, this is 19 % of all water abstracted from the environment. We need a more ambitious mains programme replacement.</li> <li>9.SW have not taken account of the completion of Hampshire National Grid programme.</li> <li>10.The investment model is not fit for purpose. It needs to be revised. Smaller more sustainable options are required and not large infrastructure schemes.</li> <li>11. Possibility of market trading for water credits is mentioned. This is dangerous as it could create a loophole for water companies and speculative developers to exploit to make money and not fix the problems.</li> <li>12.Spiralling costs, program delays, significant environmental effects, lack of legacy and short life span IS NOT GOOD VALUE FOR MONEY.</li> <li>13. The 40 km transfer to [REDACTED] from Havant Thicket reservoir has unacceptable high carbon impacts and greenhouse gas emissions.</li> <li>14. The SW preliminary Environmental Information Report 2924 stated a likely significant effect on the marine environment from this scheme.</li> <li>15.MOVING THE [REDACTED] ABSTRACTION TO THE TIDAL LIMIT WOULD BE BETTER. This is not mentioned.</li> <li>16.Why is moving abstraction to the lower catchment of rivers not being prioritised?</li> <li>17. Why are there not more challenging targets set for the delivery of the groundwater borehole schemes and Test managed aquifers recharge scheme in Hampshire?</li> <li>18. The investigation of other aquifer storage schemes in Hampshire, The IOW and West Sussex should be prioritised!</li> </ol> | <p>'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable, we produced a non-technical summary document for those seeking a high-level understanding of our plan. You can view the publicly available documents on the link below:<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. We have received 1176 responses as part of rdWRMP24 consultation.</p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwelling occupancy, population in commercial properties and business counts. Following the publication of the latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range from 7% to 34% growth at the company level between 2025</p> |

|           | <p>19. Despite allocated funds by OFWat no work is taking place to ensure the alternative Hampshire effluent recycling option using [REDACTED] and a bespoke environmental buffer lake are advanced as back up.</p> <p>20. Why is capacity at existing water treatment plants not increased?</p> <p>21. Would it be better to develop smaller schemes, close to where water is needed?</p> <p>22. Why is SW not investigating and bringing forward additional new reservoir schemes?</p> <p>23. Reduction of usage of drinking water has not been seriously thought of. Liaison with customers, schools, business, agriculture, golf course etc. Too much water is wasted.</p> <p>24. Critical documents have not been made available to the public. Why?</p> <p>25. Customer preference has shown that more natural solutions as aquifer storage, reservoirs and catchment management are preferred.</p> <p>26. Lack of adequate and meaningful engagement and consultation is evident.</p> <p>I am very concerned about this scheme. The environmental damages are evident. The energy costs are huge for a short term solution. Nature has taught us that natural solutions must be considered wherever possible and it is possible in this case.</p> <p>Do you want to look back in 30 years and recognise that you have been part of the destruction of the local environment?</p> <p>Healthy drinking water is essential to us. I have no confidence that this will be provided to us by SW. We just need to see the state of our sea and rivers.</p> <p>Object to this scheme and work with ecologists to find the best solution.</p> | <p>and 2075. The range of growth forecasts considered for each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>Our plan is adaptive in nature. This means that we can switch schemes depending on the scale of population growth, climate change impacts, and the amount of reduction in the volume of water we get from our existing sources. We do consider the risks in delivering the schemes selected in our plan and try to mitigate them as much as we can.</p> <p>Environmental markets are one way to facilitate greater investment in environmental improvements delivered by technical solutions. A Water Saving Market (WSM) would work by facilitating trade between buyers and suppliers. A well-designed market will have clear governance and operational settings.</p> <p>Affinity Water are investigating the feasibility of a Water Saving Market to deliver water efficiency solutions and support water neutrality. As the only region in the UK with established water neutrality requirements, Southern Water is supporting Affinity Water in this feasibility study, together with Local Authorities from the region. Sussex North WRZ is one area proposed for the study, as an area with existing water scarcity issues and developmental pressures. SW continues to work with all stakeholders in the SNZ region to support greater understanding of water scarcity issues and explore potential solutions.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We introduced our Water Saving Audit Programme in April 2024 to help businesses reduce water consumption and save money off their bill by offering a tailored solution depending on their industry and line of work. Our audits generally include fixing leaky loos, taps, showers etc. and/or fitting water-efficient devices as well as recommending other water efficiency improvements your business can make such as rainwater harvesting. The audit (and the fixes) are free and we've partnered with the charity Groundwork to deliver this initiative.</p> |

This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP38    | <p>I am emailing to object about Southern Water's Plans for Effluent Recycling and water management.</p> <p>This is the 3rd or 4th time I have responded to recent consultations from Portsmouth Water and Southern Water. It appears as though a lot of the same proposals just keep getting recycled for comment again and again, and that no account appears to be taken of previous feedback. In my view, the current plan is worse than previous ones. I am extremely concerned about the potential (almost guaranteed) pollution arising from this Plan.</p> <p>My main concerns are:</p> <ol style="list-style-type: none"> <li>1. The drought plan to tanker water from Norway. This seems ridiculous in many ways - very expensive, resource hungry in terms of fuel and time, doesn't do anything to address the drought problem, and quite unnecessary if Southern Water properly managed the water resources we have available to us.</li> <li>2. 19% of all water that Southern Water abstracts is lost through leaks. Their plan to repair leaks is slow and ineffective. Repairing leaks should be a much higher priority and given more urgency. This would go a long way to meeting water needs.</li> <li>3. The effluent recycling scheme is wrong on every count. If Southern Water more effectively managed and stored water resources, effluent recycling would not be needed. Effluent Recycling is an expensive option, not only financially, but also bad for the environment. The infrastructure required to manage this would be a huge undertaking, disruptive of the environment, polluting, and dangerous so close to the waters edge at BroadMarsh.</li> <li>4. Based on Southern Waters' record over the past 10-20 years, it is almost guaranteed that they will put contaminated water into the Reservoir. Once contaminated water is put into the Reservoir, it will not be flushed away by sea tides or a river flow, the water will remain in the Reservoir. I feel they cannot be trusted and should not be allowed to pollute our drinking water.</li> <li>5. Southern Water has already polluted Chichester Harbour and surrounding areas. This new Plan is likely to have a significant negative effect on the marine environment, as concentrated effluent will be regularly discharged into the Solent. In addition, recent studies show that the tides move this contaminated water back to the shoreline, making the sea potentially dangerous for those who use the sea for work or recreation.</li> <li>6. I have had to actively seek out this information. I believe that this public consultation is being kept very quiet, in an effort to avoid feedback from the public. The public are not engaged in this Consultation, and this is wrong, as it is such an important issue for anyone who drinks water from their taps, and cares about the environment, and how their money is spent.</li> </ol> <p>My preferred options are:</p> | <p>'Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the financial costs of sea tankering, this option is no longer included in our plan.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much</p> |

|           | <p>i) move water abstractions from the upper catchment of rivers to the tidal limits</p> <p>ii) aquifer storage to store surplus water in the winter, so that this water is available to use in the summer (or when it is dry)</p> <p>iii) catch and store more rainfall. Keep this water out of the sewers, so that it does not just flush out to sea with the effluent.</p> <p>iv) no effluent recycling. Reduce the need for expensive and long pipes moving water around the countryside, by being more efficient and effective at abstracting and storing water.</p> <p>Please confirm that you have received this email, and advise me of the next steps.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area, and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders, and previous responders were all directly emailed regarding the consultation. We have received 1176 responses as part of rdWRMP24 consultation. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short, sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP39    | <p>I write to you this evening as a Portsmouth-based customer of both Southern Water and Portsmouth Water. I have tried to keep well-informed about the proposal to use effluent recycling as the main way to deal with the expected water shortages predicted for our locality. I am totally opposed to this so-called solution to the water shortages forecast for us here in Hampshire. My opposition is based on several concerns which I am sure you will dismiss as unjustified and which have been communicated to you 100's if not 1000's of times. But I will persist in my objection.</p> <p>Leakage: how dare you continue to ignore the persistent need to track down and repair the leaks in the failing supply system you are responsible for! Do you and the problem is halved! Your targets for such repair is far from acceptable. You must do better before you consider other works.</p> <p>The (electrical) energy demanded to run such an ill-thought out recycling scheme is simply astronomical. Surely the alternatives proposed which are nature based and sustainable must be not only considered but work towards their implementation needs to begin soon to stop the continued degradation of our rivers and wider environment.</p> <p>We need to find ways to store the amount of rainwater currently being wasted. The Havant Thicket reservoir should be the first of several such infrastructure projects.</p> <p>Customers should be rewarded for good practice or penalised for wasteful malpractice of what is and will become increasingly more precious a resource. The public need to be made more</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We recognise that customer engagement is essential, and we are committed to ensuring that our customers are fully informed about our plans and their implications. We are continuously</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>accountable in their relationship with this much under-valued resource. This can be achieved if you properly engage with a better informed public. You have a duty to ensure you take the public with you on this journey or risk a lack of trust.</p> <p>I know you will be keen to address my and the countless other objections to the effluent recycling scheme. Go back to the drawing board and rethink. And be quick!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>working to improve our public engagement efforts and increase awareness of the importance of water conservation.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short, sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP40    | <p>As a lay person I have found the 40 point list of concerns very disturbing. The very exiting of such a large list indicates to me that the current water plan has many objections which do not appear to being listened to and acted upon by the water authorities. We seem to been in a stalemate situation with no agreed plan to satisfy the issues other than having to escalate to higher authorities.</p> <p>I strongly disagree with any plan to use the new Havant thicket as a dumping site for raw effluent. I don't see a plan to persuade the general public that recycling purified waste sewage into acceptable drinking water is a proven solution which has their support. Also the implications of pumping effluent 40 miles to [REDACTED] is a proven best solution, either from an environmental and cost standpoint.</p> <p>In summary, my view is that the plan and delivery water in Hampshire and the management of its provision is not at all acceptable. We cannot stand still, so resolution of the issues raised with the water authorities needs immediate scrutiny and tracking by the government departments concerned to bring the suppliers and public into sync.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators, and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>We acknowledge the concerns raised regarding the communication and public engagement on the project. We are committed to increasing transparency and ensuring that customers have access to the necessary information to make informed decisions. Ongoing consultations and further detailed studies will continue to assess the environmental and economic impacts of the project. Feedback from stakeholders is essential, and we remain open to engagement on the most effective ways to manage future water resources.</p> |
| WRMP41    | <p>Hello there</p> <p>I wish to register my extremely strong objection to Southern Water's Water Resources Plan. The adverse environmental impact will be huge - given the infrastructure needed - Langstone Harbour and our very precious chalk streams, of which there are so few left in the world, need protecting.</p> <p>Recycled effluent has not been tried in this country before and Southern Water did not make this scheme known before Portsmouth water were given the go-ahead for the new reservoir. Customers, like me, do not wish to drink recycled effluent.</p> <p>It will b a hugely expensive project. Meanwhile, Southern Water already loses a huge percentage of the water they extract though leakages. This is ridiculous! Money should not be</p>                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact, etc., in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           | <p>being wasted on this huge project whilst so many leakages are allowed to go unchecked. Even if the project were to go ahead (&amp; I sincerely hope it doesn't) those leakages will not have been sorted out so millions of gallons of water will continue to go to waste. This water is paid for by the customer which is, in itself, preposterous!</p> <p>Many engineers, scientists, environmental groups have looked into this project and do not agree with it.</p> <p>There must be better ways forward.</p> <p>Thank you</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>(HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators, and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>We acknowledge concerns about the environmental impact of infrastructure development and are committed to working with environmental groups, scientists, and engineers to refine and assess the best long-term solutions. We continue to explore alternative methods, including nature-based solutions and sustainable water management, as part of our wider strategic planning for water security.</p> |
| WRMP42    | <p>This proposed plan has been brought to my notice as a member of more than one Hampshire climate action group.</p> <p>Given the increasing need to manage natural resources as well as possible, it is hard to accept that the scheme proposed for effluent recycling which involves the creation of expensive infrastructure producing major carbon emissions both in its making and functioning, is the right option compared with achieving more reservoirs and use of aquifers to effectively retain the increased rain we are already experiencing.</p> <p>The time and money given to the development of a scheme insufficiently improved after its previous rejection by DEFRA, would be much better spent on addressing the unforgivable level of leakage overseen by this company. Their targets for improvement in this aspect of their business show a disgraceful lack of urgency.</p> <p>Clean drinking water is a public right; recycled effluent, however carefully treated and monitored should remain well down any list of proposals to achieve it.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations, the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst benefiting long-term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>committed to reducing the greenhouse gas emissions released through the delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators, and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>We acknowledge concerns that alternative approaches, such as improved reservoir storage and aquifer recharge, may offer a more sustainable long-term solution. We continue to assess and refine our strategies, ensuring that all options align with both environmental sustainability and best value for customers.</p> |
| WRMP43    | <p>Please see my objections below to Southern Water's revised 2024 Draft Water Resources Management Plan which includes effluent recycling.</p> <p>The local weather brings plenty of rainfall in winter, so Southern Water should be developing solutions to store that free, natural water for use in the dry summer period.</p> <p>I understand that a free water-butt scheme has been trialled on the Isle of Wight, so a similar trial in this area would be an initial step.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding water butts, our business customers are able to claim a free water butt from us: <a href="https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/">https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/</a></p> <p>Slow-drain water butts are also effective in reducing water run-off and decreasing the pressure on storm sewers, as our pilot scheme on the Isle of Wight has shown, and where we</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>Southern Water lose 100 millions of litres of water every day to leaks, which represents 19% of the water they abstract from the environment being wasted through leakage in their distribution system. A comprehensive programme of maintenance and repair is needed for them to get leakage under control in the existing infrastructure.</p> <p>More specifically, the plan to recycle effluent from [REDACTED] sewage works, to a new treatment plant at Havant, using Havant Thicket Reservoir for storage, then transporting the water over 40km to [REDACTED] for treatment raises several environmental concerns as follows.</p> <ul style="list-style-type: none"> <li>* Langstone Harbour is a Site of Special Scientific Interest. The recycling plant construction work will take place adjacent to the harbour muds used by species such as Brent Geese and waders.</li> <li>* The recycling plant buildings and tanks will be up to 13m high, causing a significant visual impact. If the Recycling Plant area is lit at night this will add to its visibility from long distance and will impact the local night time ecology, including bats.</li> <li>* Detrimental impact on the Solent from discharge of concentrated reject water. There is significant concern about the impact of more concentrated reject water from the effluent recycling process being discharged into the Solent via the Eastney Long Sea Outfall. The Southern Water assessment indicates a 'likely significant effect' in their Preliminary Environmental Information Report.</li> <li>* Effluent recycling was primarily proposed for drought periods, but Southern Water have indicated that they will operate the plant and pipelines at a capacity of 30 million litres every day. This represents a huge amount of treatment chemicals and energy being used to treat and pump vast quantities of water 40km to [REDACTED]. This is clearly not a sustainable environmental solution.</li> <li>* The effluent recycling aspect of this raises particular concerns, which, when combined with a lack of trust in the water companies risks pushing people away from tap water resulting in an increase in waste plastic water bottles.</li> </ul> <p>Southern Water should be developing safer, more sustainable solutions, as well as reducing the existing leakage rate.</p> <p>Yours faithfully</p> | <p>have now installed over 4600 water butts: <a href="https://www.southernwater.co.uk/latest-news/free-water-butt-initiative-expands-to-gurnard-on-the-isle-of-wight/">https://www.southernwater.co.uk/latest-news/free-water-butt-initiative-expands-to-gurnard-on-the-isle-of-wight/</a></p> <p>These water butts have a drain installed halfway up, allowing the top half to slowly drain into the network over several hours. This way, around 100 litres is left empty for the next time it rains. Following the success of the pilot scheme, this is now being replicated in Kent, where we are installing more than a thousand free water butts to help reduce storm overflows in Whitstable, Deal, Swalecliffe, Margate, and in Fairlight, East Sussex.</p> <p>On leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Portsmouth Harbour WTW is already in existence. The water recycling plant will be designed to be sympathetic to Broadmarsh Coastal Park and views from Langstone Harbour without compromising functional or safety requirements. The majority of the pipelines will be installed using trenches across farmland. In other locations, such as populated areas or where there are particularly sensitive environmental constraints, trenchless techniques will be used. Installation of the pipelines would be controlled by various management plans, including a Construction Environmental Management Plan. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available both in the summer and winter.</p> <p>There is significant concern about the impact of more concentrated reject water from the effluent recycling process being discharged into the Solent via the Eastney Long Sea Outfall. The Southern Water assessment indicates a 'likely significant effect' in their Preliminary Environmental Information Report. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. Regarding storage, reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We acknowledge concerns regarding the environmental impact and sustainability of the effluent recycling scheme. The plan aims to ensure the security of water supply while balancing environmental and operational considerations.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| WRMP44    | <p>Dear Secretary of State Reed,</p> <p>We understand that the government is keen to promote national infrastructure projects which is to be applauded. Amongst those being put forward is the Southern Water's 'Water Resources Management Plan' whereby the Portsmouth Water's Havant Thicket Reservoir will be used for recycled effluent from the SW's [REDACTED] Water Treatment Works. This action will affect communities in East Hampshire and the western communities in West Sussex.</p> <p>This project requires the recycling of effluent to create an end product of potable water. This has never been done before in this country. Portsmouth Water received planning permission for its Havant Thicket Reservoir because it will be filled with the spring fed waters from the aquifers of Bedhampton. This was fully agreed upon by Havant Borough Council, and all the communities. Since then Southern Water have retrospectively requested planning permission to undermine this situation to the disquiet of all the Portsmouth Water customers.</p> <p>This is a project that is a public utility paid for by the taxpayers which has had very little consultation and oversight and which will involve a system never before used in the UK. We are aware that Southern Water has not followed the guidelines to ensure the full engagement of the communities during the formative years. This is indicative of why there is a general consumer distrust in Southern Water and the water sector generally.</p> <p>We have deep concerns over the efficacy of this whole project which, as it stands, will impact the health of the communities and future generations together with lasting damage to the environment. The possibility of hundreds of thousands of customers using single use bottled water on a daily basis is very real. There has been very little action by Southern Water to offer and research alternative less costly and less damaging alternatives - Tanking water from Norway is not a financial nor sustainable alternative.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps</p> |

|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>As a result action groups have come together to express to you, as Secretary of State, their deep concerns over the integrity of the future of their drinking water and we request the appropriate authorities to consent to the following action:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> An in depth independent review of the entire proposed infrastructure by independent qualified professionals in this field be published.</li> <li><input type="checkbox"/> An in depth independent review of the ability for SW's recycling engineering to satisfactorily cleanse the recycled effluent removing all known chemical pollutants and pharmaceutical contaminants by independent specialists in this field.</li> <li><input type="checkbox"/> An in depth independent review of the costings of all the proposed infrastructure, pipes, pumping stations, etc. by independent financial advisers.</li> <li><input type="checkbox"/> And a costings of the on going maintenance required for a project that will be required to run daily all year round and not just in drought conditions and to forecast the life time of such a project.</li> <li><input type="checkbox"/> An independent review of the state of the infill-site at Broadmarsh which will be cut open to enable all the 45kms of piping required to transfer the water to the [REDACTED] pumping station and beyond.</li> <li><input type="checkbox"/> And for the forecasting of the chemical and health impacts the opening of this infill site will have on the harbour and communities.</li> </ul> | <p>will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>Building on former landfill sites is not unusual. When done with proper management and compliance with regulations and ensuring environmental safeguards are in place building on former landfill sites is both feasible and safe and is increasingly an important tool in sustainable development,</p> <p>Southern Water has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill, including in respect of piling down to chalk. Works interacting with the landfill are expected to require an environmental permit, which provides an additional layer of protection and control in relation to those works.</p> <p>We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main report to the statement of response.</p> <p>The financial and operational feasibility of our infrastructure investments, including the long-term maintenance and lifecycle costs, have been assessed as part of our regulatory submission. The overall cost of the HWTWRP has been scrutinised by Ofwat and will continue to be reviewed in upcoming assessments. We will ensure that all infrastructure investments provide the best value for customers while maintaining environmental sustainability.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. The consultation will also include further analysis of the cost implications and alternative options for meeting long-term water supply needs.</p> <p>We appreciate your feedback and will continue to engage with stakeholders to ensure transparency and accountability in our decision-making process.</p> |
| WRMP45    | <p>I wish to raise my concerns and objections to Southern Waters proposed Water resources management plan (wrmp).First of all however I would like to point out that as a customer of Southern Water ( of which I have no choice) I have not been contacted or consulted, either through email, bills, or publicity through the media digital or conventional, posters radio advertisements or flyers for example, about any proposed changes or projects, (It is like they have been knocking on my door with a sponge and wonder why I haven't opened the door).That will affect the supply of water to my home or where and how this would be achieved. I was made aware of the wrmp by a flyer from the Green Party. At this meeting the wrmp was broken</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>On public consultation, our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>down into a format and length that was universally understood. The wrmp came across as being onerous with regard to capital expenditure and ludicrous in its proposed alternative should the scheme be rejected, more on this below.</p> <p>I would like to object to the wrmp as<br/>There has been a lack of public consultation.</p> <p>The way in which water companies are rewarded financially for infrastructure would possibly lead to over elaborate grandiose inefficient projects, as they are financially rewarding . Where as repairing leaking existing infrastructure is not (which could lead to up to a 20% reduction in wasted drinking water. This constant leakage must also be causing an untold amount of subterranean damage which could destabilise ground conditions across the region.</p> <p>Southern Water have proposed to “import” water from Norway in tankers to cope with Draught conditions!! What is the cost of this financially and environmentally? Has Southern water hired a dedicated berth for this purpose? As i’m certain that berths are limited and shipping would have to wait for an available berth otherwise. What a ludicrous proposal! Not to mention the environmental impact of allowing this soft water to escape through the existing leaking distribution network in to a hard water ecosystem with many SSSI's in the region. I feel certain it's only part of the wrmp as joke or threat to expedite their proffered proposal.</p> <p>I accept that we are having dryer summers but it is well reported that we are having much wetter winters. There are no alternatives in the wrmp to store water in the perfectly porous chalk rock strata or proposals for more reservoirs. Talking of which Havant thicket. A new reservoir that was supposed to store spring water for drinking purposes. Is now going to be allowed to have part treated water stored in it! So we are now going to Store partially treated water in a reservoir! I felt the need to state this twice🙄 I have not been to the North Pole but if do go, I know a coat would be a good idea 🧥 I also know that storing partially treated water in reservoir or heaven forbid untreated water released in flood / heavy rainfall conditions (see Southern Waters track record for this) would be disastrous. Havant Thicket is after all a RESEVOIR with no natural flow through! And untreated water would seep into the ecosystem of the resevoir (see lake Windermere as an example)</p> <p>It would appear that having had the previous wrmp rejected by DEFRA the only new addition to their failed attempt is to threaten tankers of water to cope with any shortfall. It looks like they have handed the same homework in again and are expecting a A ★ for their efforts . I hope they will receive a must try harder do it again as well as detention.</p> | <p>Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding sea tankering, this option is no longer included in our plan. However due to the large amount of water that could be brought in by sea tanker if this option were used (45,000,000 litres per day), a port with a suitably large enough berthing location (&gt;10m deep) would be required. This berthing location would also require an area of storage (open or closed) to be provided for offloading/delivery, with space for forward transfer to an appropriate water supply works. Five potential sites have been assessed for suitability:</p> <ul style="list-style-type: none"> <li>• Southampton dock (container dock and dry dock), with connectivity to the network via Test Surface Water WSW</li> </ul> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <ul style="list-style-type: none"> <li>Bury Marsh jetty, Southampton, with connectivity to the network via Test Surface Water WSW</li> <li>Calshot Marshes port, IoW with connectivity to the network via the IoW</li> <li>Fawley refinery jetty, with connectivity via the current SWS pipework supply to the refinery</li> <li>Shoreham harbour, Shoreham-by-Sea, where no immediate connectivity was identified.</li> </ul> <p>At present the most suitable site has been assessed as Southampton dock, subject to agreement with key stakeholders, including the Port of Southampton, the Harbour Commissioners and the Marine Management Organisation.</p> <p>Regarding the financial costs of sea tankering, this option is no longer included in our plan.</p> <p>Regarding the environmental impacts of sea tankering, this option is no longer included in our plan. As part of our role to protect and enhance the environment, we are committed to reducing carbon. You can find out more about our carbon policy here: <a href="https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/">https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/</a>. We aim to deliver net zero carbon by 2050 and we are expanding our carbon accounting processes to measure the impact of our capital delivery programme.</p> |
| WRMP46    | <p>I would like to put in writing my objection to the current proposals for the Havant Thicket recycling water development. Having read all the information provided, it is my concern that this is an ill thought out project, that is excessively expensive, and will not improve the way in which water and sewage are managed. I believe that alternative projects should be pursued would be far more cost effective, without having residents drink effluent recycling. I am seriously concerned for the public health of customers, impact on the overall local environment; destruction of natural habitats and the risks of pollution to our local rivers and seas.</p> <p>Yours sincerely</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p>                                                                                                                                                                                                                                                                                  |
| WRMP47    | <p>With regards to the revised draft Water Resources Management Plan by Southern Water - I am emailing you to strongly object to the plan.</p> <p>There are 40 detailed reasons below why it is a not a good idea, but the overarching concern is that Southern Water are not a reliable partner to deal with our drinking water in a correct and responsible manner which has been demonstrated over the past few years. And, if Southern Water were to fix their leaks in a responsive and adequate way, there would be no need to</p>                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1) With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>recycle sewage water for drinking water, as there would be a more than adequate supply (even without the new reservoir).</p> <p>██████████ I would be grateful if you could also take up this cause, as thus far, you have been invisible when it comes to the concerns of probably the majority of your constituents.</p> <p>1<br/>The plan does not strive to work with predicted changes to our climate to capture more winter rain for use in dry summers. Rainwater provides a good quality free raw water resource and we need to prioritise schemes that capture and store it for dry summers. (For further detail refer to item A below).</p> <p>2<br/>SW have not completed a full review of the plan considering all alternative options as “a full re-appraisal exercise was not considered time or cost beneficial” (Annex 20, page 3). Given the importance of finding immediate solutions for the rivers Test and Itchen and at Pulborough, along with the large volume of objections to the options selected in the previous draft plan, a full and more robust review was essential. More sustainable options previously ‘parked’ by SW which work with predicted climate changes should have been more robustly assessed and included in the revised draft plan.</p> <p>3<br/>It is clear that SW have only focused on identifying options to fill the gap as a result of the delay to recycling options in Hampshire and at Littlehampton (Annex 20, page 1 and 3) instead of seriously looking at prioritising more sustainable options.</p> <p>4<br/>The timescales for delivery of effluent recycling options are unrealistic given their complexity and consenting requirements. Having put back the delivery year for the Hampshire effluent recycling scheme to 2034-35 in the Statement of Response, in places in the latest plan this option has now been brought forward to 2033-34. This is not realistic given the public opposition, risk of an enquiry, risks associated with bringing forward technology which is new to the UK for effluent recycling, and developing on old landfill sites, the recycling options are much more likely to be delayed further, leaving our precious and iconic chalk rivers with no solution for longer.</p> <p>5<br/>SW proposal to continue to rely on and extend the use of the Candover Drought Option (augmentation boreholes) and drought permits (Technical Report page 138-139) should not be permitted beyond 2030. The plan extends their use up to 2034. (For more detail refer to item B below.)</p> <p>6<br/>SW should not be allowed to rely on continued use of the Candover drought option, Lower Itchen and Test drought orders, while they just wait for the Hampshire effluent recycling/ transfer scheme to be delivered as proposed (Annex 20, page 1 and 2), as it is inevitable that the Hampshire recycling scheme will be delayed further and will not be available in 2035, a more sustainable solution must be developed.</p> <p>7</p> | <p>2) Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our fdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>3) The purpose of the targeted options appraisal process for rdWRMP24 was to mitigate the impacts of a proposed extended reliance on the River Test and Candover drought options in Hampshire post 2030 and to limit the use of Pulborough surface water drought option under droughts of more than 1-in-200 year severity beyond 2030. Annex 20 to our rdWRMP24 Technical Report describes the work carried out in this regard.</p> <p>4) With regard to delivery timescales, we aim to have the Hampshire Water Transfer and Water Recycling Project operational by 2034.</p> <p>5, 6) It is our desire to ‘avoid’ use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>7) With regard to the viability of sea tankering, our Water Resources Management Plan (WRMP) looks at our future water needs from 2025 to 2075. All our water supply options are continually appraised as part of our adaptive planning process and sea tankering is one water supply option that we considered and have now excluded it from our plan.</p> <p>8) For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>Tankering water from Norway in a drought cannot be accepted as a credible drought plan. (For more detail refer to item C below.)</p> <p>8<br/>SW are unnecessarily pessimistic in their assumptions regarding population growth and this is driving a large demand deficit. The information provided is also contradictory with Annex 7b forecasting 23.56% growth and Annex 14 referring to a 17% increase by 2050. Surely that level of population growth is not credible. (For more detail refer to item D below.)</p> <p>9<br/>Assuming high levels of abstraction reform is over precautionary when what will be required in future is currently very uncertain as SW environmental studies are still ongoing. This is driving a large demand deficit which helps SW justify their unsustainable effluent recycling schemes. (For more detail refer to item D below.)</p> <p>Assuming no abstraction at all even in winter from the rivers Itchen and Rother is not appropriate and over precautionary. (For more detail refer to item E below.)</p> <p>10<br/>SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet their slow programme for improvements means even by 2050 they will still be leaking about 10% of all the water they treat, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious mains replacement programme they will never get leakage under control.</p> <p>An industry leakage specialist tells us that if Southern Water prioritised and funded leakage reduction they could strive to achieve a 50% reduction by 2040 and a 70% reduction by 2050, rather than the 53% leakage reduction target they have set themselves by 2050.</p> <p>11<br/>SW have not taken account of the completion of the Hampshire Grid improvement programme which will be available from 2030 to rezone the Western supply area. The Company option review and selection process is based on individual supply zones. Taking account of the increased ability to transfer water within Hampshire by merging existing zones could have changed the options appraisal process. (For more detail refer to item F below.)</p> <p>12<br/>The investment model is not fit for purpose it needs to be urgently revised so that it does not preferentially select the use of drought options/permits. The model needs to be able to preferentially select smaller more sustainable options, whereas it currently favours large infrastructure schemes which should be a last resort once more sustainable options have been exhausted. (For more detail refer to items K and L below.)</p> <p>13<br/>The possibility of market trading for 'water credits' is mentioned. This is a concern as it could create a new loophole for water companies and speculative developers to exploit to make money, while not actually doing anything to fix the problems faced.</p> <p>14<br/>Given spiralling costs, programme delays, significant environmental effects, the need to operate 365 days a year, lack of legacy and short life-span, the Hampshire effluent recycling scheme cannot represent best value for customers.</p> | <p>WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRP in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>9 &amp; 10) The government has set a 25 Year Environment Plan target of 75% of waters to be close to their natural state. Abstraction reform plays a key part in this plan. Sustainable water abstraction is essential to ensure that river flows and groundwater levels support ecology and natural resilience. Since 2008 the Environment Agency has made changes to over 270 abstraction licences to prevent over 30 billion litres of water per year being removed from the environment where abstraction is unsustainable.</p> <p>Water companies, through their WRMPs, need to plan for future deficits in supply generated by reductions in abstraction licences. Through the Water Industry National Environment Programme (WINEP), studies and investigations are ongoing to understand the environmental impact of our current licences. Any future licence changes are informed by the conclusions of these WINEP environmental studies.</p> <p>11a) The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>11b) We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p> <p>12) The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes</p> |

| 15        | The selection of effluent recycling via Havant Thicket and transfer (40km) to [REDACTED] results in unacceptably high carbon impact and greenhouse gas emissions, more than double that of any other transfer or desalination scheme. (For more detail refer to item M below.)                                                                                                                                                                                                                                                                                                                                                                               | and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 16        | SW Preliminary Environmental Information Report (2024) confirmed a likely significant effect on the marine environment from the Hampshire effluent recycling scheme. Modelling for water quality impacts on the reservoir is still not available. The scheme should not move forward until the environmental risks/impacts are known.                                                                                                                                                                                                                                                                                                                        | 13) Environmental markets are one way to facilitate greater investment in environmental improvements delivered by technical solutions. A Water Saving Market (WSM) would work by facilitating trade between buyers and suppliers. A well-designed market will have clear governance and operational settings. Affinity Water is investigating the feasibility of a Water Saving Market to deliver water efficiency solutions and support water neutrality. As the only region in the UK with established water neutrality requirements, Southern Water is supporting Affinity Water in this feasibility study, together with Local Authorities from the region. Sussex North WRZ is one area proposed for the study, as an area with existing water scarcity issues and developmental pressures. SW continues to work with all stakeholders in the SNZ region to support greater understanding of water scarcity issues and explore potential solutions. |
| 17        | The process of environmental assessment and screening methodology cannot be robust if unsustainable and environmentally damaging schemes like the Hampshire effluent recycling/transfer scheme get through. The scheme that in 2022 when it was selected had the highest environmental impact score.                                                                                                                                                                                                                                                                                                                                                         | 14) Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.                                                                                                                                                                                                                                                                                                                                                                                                           |
| 18        | For more information on the key concerns and environmental impacts associated with the Hampshire effluent recycling scheme via Havant Thicket Reservoir please refer to the Key Concerns page at this link.<br>Concerning option selection                                                                                                                                                                                                                                                                                                                                                                                                                   | 15) Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 19        | Moving the [REDACTED] abstraction to the tidal limit would be a better, more robust and sustainable solution to protect the whole of the freshwater catchment and restore natural flows in a drought. This is not mentioned as an option that has been considered in the SW Technical Report, nor Annex 20.                                                                                                                                                                                                                                                                                                                                                  | 16) A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 20        | In the future SW indicate they will work with stakeholders to look at moving the abstraction on the River Adur to the estuary (transitional waters) to allow more abstraction (Annex 20, page 30-31) but this is not in the current plan. Moving river abstractions to the tidal limit can have environmental benefits, restoring more natural freshwater flows in rivers to protect the ecology. This scheme should be selected now and prioritised as a more sustainable solution. (Why is the solution of moving abstractions to the lower catchment of rivers not being prioritised for investigation as a more sustainable solution across the region?) | 17) We have engaged an independent consultant for our environmental assessments who are following the standard methodology for these assessments. The investment model takes into account the outcome of environmental assessments and if two otherwise equivalent options are available, it will select the option with lower environmental impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 21        | More challenging targets must be set for delivery of the groundwater borehole schemes and Test Managed Aquifer Recharge Scheme in Hampshire, as they require minimum infrastructure and are within the company's control. Investigation and delivery should commence in 2025 to ensure these schemes are delivered as quickly as possible, to provide at least 13.8 Ml/d to help better manage resources in the catchments and protect the rivers Test and Itchen from drought orders. We need Defra and the regulators to strongly challenge on this to ensure a quicker delivery date. (For more detail refer to item H below.)                            | 18) Noted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 22        | The investigation of other aquifer storage schemes in Hampshire, the IOW and West Sussex is not being prioritised to establish the yield they could provide. This is essential and should be                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 19, 20) We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on                                                                                                                                                                                                                                                                                                                                                                                   |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|           | <p>prioritised and funded urgently so that these schemes can be included as feasible options. (For more detail refer to item G below.)</p> <p>23<br/>Proposed schemes to recycle water currently wasted at the [REDACTED] and Test Surface Water WSW should be prioritised more urgently to help minimise abstraction on the Test and Itchen all the time, not only in a drought (Annex 20, page 32).</p> <p>24<br/>No work is taking place to ensure the alternative Hampshire effluent recycling option using [REDACTED] and a bespoke environmental buffer lake are advanced as a back-up, despite this work having been allocated funding by Ofwat. Nor is there any reference to further investigation of a combined Portswood and [REDACTED] scheme. A scheme previously indicated to be feasible with sites that are closer to where the water is needed. (For more detail refer to item J below.)</p> <p>25<br/>Negotiations with a very large industrial water user in South Hampshire should have been brought forward as a priority, to explore alternative supply options when the contract expires in 2026, to free up drinking water for SW customers in a drought (Annex 20, page 6) and provide more certainty for the plan.</p> <p>Could a desalination plant that trials research into alternative technology, potential uses for the hyper saline solution and reducing energy consumption be a way forward for this site (Annex 20, page 30 refers) perhaps in partnership with industry.</p> <p>26<br/>In West Sussex the need for network upgrades is being used as an excuse not to bring forward schemes at existing works that would increase supply (Annex 20, Appendix A). If all of these schemes rejected for this reason were brought forward, they could deliver more than 20Ml/d of water to the Central Region. This is more water than is to be provided by the proposed Littlehampton (Ford) effluent recycling scheme which will discharge to the Western Rother. The necessary network upgrades in West Sussex should form part of the plan. Network upgrades are taking place in Hampshire to address such concerns, why not in West Sussex?</p> <p>27<br/>Across the Western and Central Area the fact that sources 'might not be available in a drought' is being used by SW as an excuse not to increase capacity at existing water treatment works. If the works were upgraded they could be used at higher capacity during normal operation, leaving other groundwater sources that would be available in a drought to rest or be used less, so that more groundwater is available in a drought. Schemes to increase capacity at existing works could deliver 18 Ml/d of water across the region and these options should be prioritised. However, SW are less likely to find this an attractive option where the source is surface water because it is cheaper to treat and supply groundwater every day. SW need to plan to use their water sources in a more sustainable way that works with climate change, not just use the cheapest sources first.</p> <p>28<br/>Multiple cheaper and more sustainable schemes have been rejected by SW because they 'cannot be delivered in time' (presumably this means by 2030).</p> <p>17 schemes in Hampshire and IOW (Western Area) could deliver at least 42 Ml/d.</p> | <p>the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>21) A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>22) Our plan includes two groundwater schemes on the IOW to provided up to 3.4Ml/d 2040.</p> <p>23) With regard to prioritisation of recycling water at River Itchen WSW, as noted in the rejection register against these schemes, enhancements to treatment process are needed at these sites to reduce process losses. More crucially, under some of the drought conditions covered by WRMP24, it is unlikely that River Itchen WSW would be running. Therefore, this scheme would provide no supply benefit in a drought. However options to reduce process losses will be considered for WRMP29.</p> <p>24) We are focussed on delivering the HWTWRP by 2033-34. The alternative option to use Fareham for recycling water has not been shelved but is put on hold.</p> <p>25) We will be exploring the option of amending the bulk supply agreement with a large industrial user in HSW WRZ when the existing contract expires in 2026. However, we are not planning to consider any changes to the bulk supply agreement for WRMP24. We mention options relating to this large industrial user in Annex 20 of our fdWRMP24.</p> <p>26) Network enhancements in the Central area were not taken forward as the required enhancements could not be delivered by 2030. These will be reconsidered for WRMP29.</p> <p>27) The amount of water we can abstract from river and groundwater sources are determined by our abstraction licences, which typically specify the maximum amount of water we can take from a source over a year with a limit set on maximum daily abstraction. We cannot take unlimited amount of water from these sources during wet periods.</p> <p>28) Notwithstanding the fact that these 17 schemes are not explicitly identified in this query, there is little benefit in developing 17 schemes by the 2030s when the three schemes we are progressing will deliver the over twice the volume over a similar timeframe. We did not simply reject schemes because they could not be delivered by 2035. Only the schemes that were considered to mitigate the use of drought permits and orders beyond 2030 had to meet the criterion of being deliverable by 2030, because schemes delivered after 2030 would not be able to mitigate the reliance on drought permits and orders beyond 2030.</p> <p>29) We have looked at over 50 reservoir options as part of our options appraisal process over the last 3 WRMP cycles. These are not taken forward due to environmental concerns that will</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>7 schemes in West Sussex (Central Area) could deliver at least 18 MI/d Yet the effluent recycling scheme in Hampshire which will supply both Hampshire and West Sussex cannot be delivered until 2035 either, and that timescale will almost certainly slip further. SW are putting all of their 'eggs in one basket'. Surely it is better, more resilient and more sustainable to develop multiple smaller schemes, close to where the water is needed, many of which do not even require new consents, just treatment plant or borehole upgrades.</p> <p>29</p> <p>SW are still not urgently investigating and bringing forward additional new reservoir schemes in the short to medium term, despite this being customers preferred choice. The delivery of the River Adur project is not scheduled until 2039/40, no other reservoir schemes are in the pipeline in Hampshire or West Sussex in the revised draft plan.</p> <p>30</p> <p>Groundwater schemes on the Isle of Wight (IOW) are not brought forward as the water gained cannot be transferred to the mainland to help the rivers Test and Itchen in a drought (Annex 20, page 5-6). However, if implemented they would reduce the amount of water that needs to be transferred from Southampton to the IOW providing a benefit that should be pursued.</p> <p>31</p> <p>The timescale for delivery of ten years should not be seen as a valid reason to reject provision of a bi-directional link between the IOW and the mainland, especially as it could allow water to be used more flexibly in a drought, including use of future spare water from Sandown.</p> <p>32</p> <p>There has been little proactive work by SW to investigate buying or trading licences with private supply users across the region. In a restricted document supporting the previous draft plan it indicated buying just one licence could deliver 19.7 MI/d. There should be more proactive investigation and negotiation by SW to buy existing private abstraction licences, this in turn would then open up the potential for a more flexible approach to the use of licences within a catchment to meet water supply needs and environmental objectives.</p> <p>33</p> <p>Much more effort needs to be put into working with industry, agriculture, golf courses and community buildings (schools, social clubs and so on) to reduce their use of drinking water for non-potable uses. This can be achieved with free surveys and provision of grants to encourage the adoption of more sustainable solutions.</p> <p>34</p> <p>The free water butt scheme trialled on the IOW should be rolled out across the SW supply area to customers as a priority.</p> <p>35</p> <p>To read about a strategy for a better way forward please refer to the Water Matters page on 'A better way forward' at this link.</p> <p>Concerning inadequate consultation with water users and affected communities</p> <p>36</p> <p>Critical documents to understanding and evaluating the options available have not been made available to the public. Instead, SW have classified the Options Appraisal and key environmental assessment reports as restricted. In fact there are more documents restricted in 2024, than there were in 2022. Is this a deliberate play to hide important information? As SW</p> | <p>make it difficult to get planning permission. However, we review these options for each WRMP cycle and will review them again for WRMP29.</p> <p>30) Our plan includes two groundwater schemes on the IOW to provide up to 3.4MI/d by 2040.</p> <p>31) The delivery time of an option is the reason for rejection only in cases where water is needed earlier than the option can be delivered. The delivery time in itself is not a reason for rejecting an option.</p> <p>32) We are open to licence trading. The Sittingbourne industrial re-use scheme in our Kent area is effectively a licence trading scheme that will provide up to 8MI/d from 2030-31 onward.</p> <p>33) Our water efficiency plan includes helping non-household customers reduce their consumption through smart metering and water audits as well as a collaborative fund to promote water efficiency.</p> <p>34) Regarding water butts, following the success of the pilot scheme, this is now being replicated in Kent, where we are installing more than a thousand free water butts to help reduce storm overflows in Whitstable, Deal, Swalecliffe, Margate and in Fairlight, East Sussex.</p> <p>35) Noted</p> <p>36) Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>37) We consulted extensively with our customers and stakeholder before publishing our dWRMP24 and solicited their views on the different option types. However, we have a statutory duty to maintain uninterrupted supply of water in all but the most extreme weather conditions, which may mean selecting options less preferred by customers.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>know it is unlikely that customers will be prepared to travel to their Worthing HQ to view these large reports that cannot be properly reviewed in one visit. Other water companies made this information more accessible.</p> <p>37<br/>Customer research across the water industry has shown a clear preference for more natural solutions such as aquifer storage, reservoirs and catchment management. Why are SW not listening to their customers and instead pushing ahead with the least favoured options of desalination and effluent recycling?</p> <p>38<br/>Assurances given by SW that water quality modelling and energy use information for the Hampshire effluent recycling scheme would be available in time for the 2024 consultation have not been met.</p> <p>39<br/>Lack of adequate and meaningful engagement /consultation with customers;<br/>– A very significant alteration is taking place to customer's water supply with the source changing from river, spring or groundwater to recycled effluent. SW should be proactively engaging with all their customers to get their feedback on this material change.</p> <p>– SW did not follow the legal requirement for a new statutory consultation on their plan when there was a material change to the option(s) selected in 2021, when the [REDACTED] desalination scheme was rejected, and the WRMP19 back-up option of discharging recycled effluent to the River Itchen was also rejected. When there was a material change to the plan in 2021 SW should have undertaken a comprehensive review of all the available options and a full public consultation. This did not happen.</p> <p>– As a result, communities in the areas affected by the selected options did not have the opportunity to comment at the 'formative stage' of the plan, before the new effluent recycling options were selected.</p> <p>– At the time of previous consultations (2020 to 2022) posters were not even placed at sites impacted to make local communities aware that a consultation was taking place. Nor have posters been placed at impacted sites for this Autumn 2024 consultation.</p> <p>40<br/>The consultation documents are vast, very repetitive and fail to provide important information, or make it restricted and inaccessible, making it very difficult for a lay person to understand/get through the consultation reports. Is this intentional?<br/>Since this is a 'once-in-a-generation' chance to address future water needs, there needs to be a more open discussion about moving to a more sustainable approach which works with predicted climate change, not against it.</p> | <p>38) The water quality modelling and assessments undertaken so far have shown that there are unlikely to be any ecological or biodiversity impacts in the Solent from the water recycling process. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>We made clear in our Summer 2024 Consultation for the Hampshire Water Transfer and Water Recycling Project that water quality modelling and assessment work was ongoing and would be fully reported in our Development Consent Order application. As that work has progressed, we are now consulting on it as part of our Spring 2025 Consultation.</p> <p>As part of our Summer 2024 Consultation, we shared our preliminary assessment of carbon emissions associated with the Hampshire Water Transfer and Water Recycling Project. This was based, in part, on energy usage information for the project. An updated carbon emissions assessment will be provided as part of our Development Consent Order application. The energy usage information used to support that will be appended to the assessment.</p> <p>39) Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>40) We provided detailed information on our rdWRMP24 through a technical report accompanied by 22 annexes. The WMRP, by its nature, is a highly technical plan. We need to demonstrate that our plan is legally and technically compliant with the regulatory framework and that makes the use of technical terms unavoidable. However, we do try to make the plan understandable to a broad audience and therefore included a detailed glossary at the start of our rdWRMP24 main technical report. In addition, we also published a non-technical summary that highlighted key features of our plan</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP48    | <p>I am writing as a concerned resident who lives close to the new Havant Thicket Reservoir site, to object to Southern Water's (SW) plan to use this facility as part of its effluent recycling strategy, and in which SW and Portsmouth Water (PW) have deliberately misled residents and other stakeholders about their intentions for the new reservoir.</p> <p>The majority of local people were supportive of PW's proposal to create a storage facility for fresh water from our local aquifers, extracted via Bedhampton Springs. At no time during the Planning consultation was recycling of effluent mentioned and I am convinced that local support would not have been forthcoming had this been known. This was a flagrant breach of trust by PW and SW which could have changed the outcome of the planning application had it been stated at the outset.</p> <p>It was heartening therefore that after the great public response to DEFRA, objecting to SW's plan to pump treated [REDACTED] effluent into Havant Thicket Reservoir, the Plan did get rejected. SW were told to think again, but rather than look at more sustainable options that might undermine their case for recycling effluent, they have effectively regurgitated their old Plan, giving lots of reasons why the better options cannot be developed quickly enough. SW say the effluent recycling scheme still remains their best option - with the addition of a nonsensical proposal to tanker water from Norway to Southampton in a drought to plug the gap in their plan to 2035!</p> <p>There are numerous reasons for objection, both technical and procedural, listed in the addenda below, which lean on much greater knowledge than I have about the water industry, but I can summarise them as follows:</p> <p>* In the UK we only collect 1% of rainfall. We need a plan that works with climate change to collect more water in the predicted wetter winters and to store it for use in drier summers, using underground confined aquifers and by building new reservoirs. Instead, SW proposes energy</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>With regards to your comments on transparency, we remain committed to transparency and welcome constructive engagement on the options we have considered. We will continue to refine our approach based on new evidence and stakeholder input, ensuring our WRMP reflects both regulatory requirements and our responsibility to safeguard water resources for future generations.</p> <p>Southern Water has produced this WRMP24 in line with the requirements set out in legislation, Defra Directions, and guidance issued by the EA, Ofwat, Natural England and Natural Resources Wales, and will continue to do so. Our plan has been developed in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years, ensuring our approach evolves to reflect new information, regulatory expectations, and consultation feedback. In rare cases, where there are unresolved issues and substantial public interest, the Secretary of State may call an inquiry or hearing.</p> <p>With regards to your comment regarding the recycled water element, supplementing the reservoir with purified recycled water will create a new sustainable source of supply. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>The recycling wastewater of wastewater and its subsequent storage in Havant Thicket Reservoir was clearly highlighted in the current draft WRMP. In fact, one of the main topics that people raised in the previous consultation (Nov 22 to Feb 23) was issues around wastewater recycling. Please see for example, p.26, 32 and 42 of the September 11 –</p> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>and chemical hungry effluent recycling from which it and its owners will be able to profit very considerably over many years, from both construction and operation.</p> <p>* The recycling plant will be located on an old landfill site on the coast at Broadmarsh (Havant), with piling and tunnelling putting Langstone Harbour at risk from leachate and the recycled water will be pumped up to Havant Thicket Reservoir and then 40kms to [REDACTED]. The current building costs are £1.2billion and spiralling. We need a radical rethink on where and how the company takes water from the environment, for example moving its abstraction points closer to the sea, and to the end users, to leave freshwater in our precious chalk streams for longer.</p> <p>* SW lose 100 million litres of water every day to leaks. 19% of all the water they abstract from the environment, which customers pay to treat, is wasted through leakage in their distribution system. SW's slow programme for improvements means even by 2050 SW will still be leaking about 10% of all the water it treats, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious leakage and mains replacement programme SW will never get leakage under control. An industry leakage expert tells us if SW put the funding and priority in, SW should be striving to achieve a 70% reduction in leakage by 2050 (not the 53% target in its plan).</p> <p>* In West Sussex, SW has not taken action to connect up its network and as a result SW is dismissing options because it can't get the water to where it is needed. Why is SW not connecting up the network? It is because they want to get the recycling schemes underway first.</p> <p>* If the Plan goes through, the use of very expensive and energy-hungry effluent recycling schemes will effectively have been approved and SW will be able to carry on and build these schemes at great cost to its customers and the environment. There is also the potential for PW to be amalgamated with SW as there is linkage at the top ownership level. If that did happen PW customers like me would be hit by even higher bills because the cost of building and operating the scheme would be shared across both companies.</p> <p>* I have no desire to drink water that contains treated effluent and nor does anyone I know, especially as our local water is of such high quality. Forcing people to take recycled water will inevitably lead to an increase in the consumption of bottled water by those who can afford it, with a consequent undesirable increase in plastic waste.</p> <p>In summary, SW's professed best options are high energy, carbon and chemical hungry solutions. SW needs to do more to repair leaks, replace water mains, encourage demand reduction from households and non-household users and develop reservoirs and aquifer storage solutions.</p> | <p>December 4 2024 Consultation on the revised dWRMP, <a href="https://waterresources.southernwater.co.uk/wp-content/uploads/2024/09/01-WRMP-Consultation-Summary-1.pdf">https://waterresources.southernwater.co.uk/wp-content/uploads/2024/09/01-WRMP-Consultation-Summary-1.pdf</a></p> <p>Regarding the selection process, effluent recycling is included in our strategy because it has been rigorously evaluated alongside other options and found to provide a reliable, sustainable source of water that complements demand management measures, leakage reduction, and other supply solutions. Our selection of preferred options follows an evidence-based approach, balancing environmental impact, feasibility, long-term resilience, and value for customers.</p> <p>Our WRMP24 builds on previous strategic assessments while incorporating new data, regulatory guidance, and extensive consultation feedback. Every potential supply and demand management option has been reassessed, including alternative sustainable solutions, to ensure that our plan delivers a resilient, cost-effective, and environmentally responsible water supply.</p> <p>Sea tankering would be an expensive option, with water supply costs approximately 150 times greater than our traditional supply sources. Our WRMP no longer includes this option so there will be no environmental impacts from sea tankering. However, as part of our role to protect and enhance the environment, we are committed to reducing carbon. You can find out more about our carbon policy here: <a href="https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/">https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/</a>. We aim to deliver net zero carbon by 2050 and we are expanding our carbon accounting processes to measure the impact of our capital delivery programme. We recognise that carbon may be significant from this option however, due to the required transport methods and temporary nature of the option. We will continue to assess the carbon footprint of this option and balance it against the environmental benefit of protecting the River Test in times of drought.</p> <p>It is our desire to 'avoid' use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>* In response to your suggestion to increase rainwater capture using underground confined aquifers and by building new reservoirs: We have assessed the option of reservoirs, our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |

|-----------|---------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | I set out below the other information from expert sources, which will no doubt already be known to you. | <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>We are planning to build new reservoirs where feasible. This includes the Havant Thicket Reservoir, the South East Strategic Reservoir Option (SESRO) and the River Adur Offline Storage. However, these will be insufficient to provide the volume of water to meet supply-demand balance in future. The HWTWRP is needed to provide the additional volume needed to maintain supply-demand balance and also offers greater resilience in the event of a prolonged drought. We will continue to explore options for additional reservoirs across our supply area for our next plan.</p> <p>A Chalk MAR scheme (feasibility trial) is included in our plan for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>* Building on former landfill sites is not unusual. When done with proper management and compliance with regulations and ensuring environmental safeguards are in place building on former landfill sites is both feasible and safe and is increasingly an important tool in sustainable development,</p> <p>Southern Water has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill, including in respect of piling down to chalk. Works interacting with the landfill are expected to require an environmental permit, which provides an additional layer of protection and control in relation to those works.</p> <p>We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main report to the statement of response.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the</p> |

|-----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>*In response to your suggestion that we should aim for 70% reduction in leakage: The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. Therefore, a 70% target would not be feasible based on our detailed assessments. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>* With regards to your question, 'Why are SW not connecting up the networks?': We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15Ml/d to 60Ml/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10Ml/d to 40Ml/d. A number of these plants can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. Regarding delivery timescales, we aim to have the Hampshire Water Transfer and Water Recycling Project operational by 2034.</p> <p>* We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We also need to look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. This options appraisal includes network upgrades and interconnector schemes in central area as</p> |

|           | <p>Addenda</p> <p>1. The plan does not strive to work with predicted changes to our climate to capture more winter rain for use in dry summers. Rainwater provides a good quality free raw water resource and we need to prioritise schemes that capture and store it for dry summers. (For further detail refer to item A below).</p> <p>2. SW have not completed a full review of the plan considering all alternative options as “a full re-appraisal exercise was not considered time or cost beneficial” (Annex 20, page 3). Given the importance of finding immediate solutions for the rivers Test and Itchen and at Pulborough, along with the large volume of objections to the options selected in the previous draft plan, a full and more robust review was essential. More sustainable options previously ‘parked’ by SW which work with predicted climate changes should have been more robustly assessed and included in the revised draft plan</p> | <p>well as in Hampshire. The regional investment modelling selects the best value combination of options.</p> <p>Southern Water and Portsmouth Water are entirely separate and independent companies but have commercial arrangements to transfer water across their respective boundaries. If there are any failures, such as losses of supply to Southern Water customers then Southern Water is responsible, if the failures affect Portsmouth Water customers then Portsmouth Water is responsible. Portsmouth Water is a ‘Water Only Company’ meaning that within its area, it provides water services. Southern Water provides wastewater services in the area Portsmouth Water supplies for water. Southern Water is not discussing changes to the current licence to operate arrangements and company mergers are not considered to be part of this consultation process</p> <p>* With regards to your comment about increased consumption of bottled water, we don’t expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper. Customer insight locally and nationally shows broad support for water recycling. The water at customers’ taps will continue to meet strict drinking water quality standards and be wholesome to drink. Customers do not need to be concerned about the water quality. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>1) With regard to storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>2) Following the first public consultation on WRMP24 (Nov 2022 to Feb 2023) regulators asked us to look again at potential resilience options to reduce reliance on drought options. We carried out a targeted re-appraisal exercise and that informed the Annex 20 that was part of the WRMP24 consultation in 2024. This was not a comprehensive full options re-appraisal akin to that carried out for the main plan preparation. The key criterion for the resilience options was that they had to be operational by 2030-31. This ruled out large infrastructure options with significant lead time and led to a targeted reappraisal of options.</p> <p>Having already undertaken an extensive options appraisal that looked at more than 1,000 options with WRSE, repeating this was not considered time or cost beneficial. It is not possible to carry out a full, regional review now given that the other five WRSE companies</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>3. It is clear that SW have only focused on identifying options to fill the gap as a result of the delay to recycling options in Hampshire and at Littlehampton (Annex 20, page 1 and 3) instead of seriously looking at prioritising more sustainable options.</p> <p>4. The timescales for delivery of effluent recycling options are unrealistic given their complexity and consenting requirements. Having put back the delivery year for the Hampshire effluent recycling scheme to 2034-35 in the Statement of Response, in places in the latest plan this option has now been brought forward to 2033-34. This is not realistic given the public opposition, risk of an enquiry, risks associated with bringing forward technology which is new to the UK for effluent recycling, and developing on old landfill sites, the recycling options are much more likely to be delayed further, leaving our precious and iconic chalk rivers with no solution for longer.</p> <p>5. SW proposal to continue to rely on and extend the use of the Candover Drought Option (augmentation boreholes) and drought permits (Technical Report page 138-139) should not be permitted beyond 2030. The plan extends their use up to 2034. (For more detail refer to item B below.)</p> <p>6. SW should not be allowed to rely on continued use of the Candover drought option, Lower Itchen and Test drought orders, while they just wait for the Hampshire effluent recycling/transfer scheme to be delivered as proposed (Annex 20, page 1 and 2), as it is inevitable that the Hampshire recycling scheme will be delayed further and will not be available in 2035, a more sustainable solution must be developed.</p> <p>7. Tankering water from Norway in a drought cannot be accepted as a credible drought plan. (For more detail refer to item C below).</p> <p>8. SW are unnecessarily pessimistic in their assumptions regarding population growth and this is driving a large demand deficit. The information provided is also contradictory with Annex 7b forecasting 23.56% growth and Annex 14 referring to a 17% increase by 2050. Surely that level of population growth is not credible. (For more detail refer to item D below).</p> <p>9. Assuming high levels of abstraction reform is over precautionary when what will be required in future is currently very uncertain as SW environmental studies are still ongoing. This is driving a large demand</p> | <p>have finalised their WRMPs. As recommended in feedback to the 2024 WRMP consultation we reviewed at a high-level a select number of options that could potentially meet the much narrower objective of reducing the continued reliance on drought options during the time period before the larger strategic options are available. This work is set out in Annex 20 of our rdWRMP24 and we will continue to explore alternatives to drought permits and orders throughout the 2025-30 period to inform the next round of WRSE plans and our WRMP29.</p> <p>3) The purpose of the targeted options appraisal process for rdWRMP24 was to mitigate the impacts of a proposed extended reliance on the River Test and Candover drought options in Hampshire post 2030 and to limit the use of Pulborough surface water drought option under droughts of more than 1-in-200 year severity beyond 2030. Annex 20 to our rdWRMP24 Technical Report describes the work carried out in this regard.</p> <p>4) With regard to delivery timescales, we aim to have the Hampshire Water Transfer and Water Recycling Project operational by 2034.</p> <p>5, 6) It is our desire to 'avoid' use of drought options and become more drought resilient. We are working on this and we are making significant investments to reduce our need for the Candover/Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>7) With regard to the viability of sea tankering, our Water Resources Management Plan (WRMP) looks at our future water needs from 2025 to 2075. All our water supply options are continually appraised as part of our adaptive planning process and sea tankering is one water supply option that we considered and have now excluded it from our plan.</p> <p>8) For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam. We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>deficit which helps SW justify their unsustainable effluent recycling schemes. (For more detail refer to item D below.)</p> <p>10. Assuming no abstraction at all even in winter from the rivers Itchen and Rother is not appropriate and over precautionary. (For more detail refer to item E below.)</p> <p>11. SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Yet their slow programme for improvements means even by 2050 they will still be leaking about 10% of all the water they treat, including the new water manufactured at huge cost from their planned new effluent recycling schemes. Without a more ambitious mains replacement programme they will never get leakage under control.</p> <p>An industry leakage specialist tells us that if Southern Water prioritised and funded leakage reduction they could strive to achieve a 50% reduction by 2040 and a 70% reduction by 2050, rather than the 53% leakage reduction target they have set themselves by 2050.</p> <p>11. SW have not taken account of the completion of the Hampshire Grid improvement programme which will be available from 2030 to rezone the Western supply area. The Company option review and selection process is based on individual supply zones. Taking account of the increased ability to transfer water within Hampshire by merging existing zones could have changed the options appraisal process. (For more detail refer to item F below.)</p> <p>12. The investment model is not fit for purpose it needs to be urgently revised so that it does not preferentially select the use of drought options/permits. The model needs to be able to preferentially select smaller more sustainable options, whereas it currently favours large infrastructure schemes which should be a last resort once more sustainable options have been exhausted. (For more detail refer to items K and L below.)</p> <p>13. The possibility of market trading for 'water credits' is mentioned. This is a concern as it could create a new loophole for water companies and speculative developers to exploit to make money, while not actually doing anything to fix the problems faced.</p> | <p>shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>9 &amp; 10) The government has set a 25 Year Environment Plan target of 75% of waters to be close to their natural state. Abstraction reform plays a key part in this plan. Sustainable water abstraction is essential to ensure that river flows and groundwater levels support ecology and natural resilience. Since 2008 the Environment Agency has made changes to over 270 abstraction licences to prevent over 30 billion litres of water per year being removed from the environment where abstraction is unsustainable.</p> <p>Water companies, through their WRMPs, need to plan for future deficits in supply generated by reductions in abstraction licences. Through the Water Industry National Environment Programme (WINEP), studies and investigations are ongoing to understand the environmental impact of our current licences. Any future licence changes are informed by the conclusions of these WINEP environmental studies.</p> <p>11a) The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>11b) We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP.</p> <p>12) The investment model needs to objectively select options based on standardised input criteria. It cannot be configured to preferentially select either smaller or larger options as that will lead to biased results and it cannot be demonstrated that the preferred plan is either least cost or best value. It does select drought options in preference to large infrastructure schemes and that is because drought options typically do not have large CAPEX expenditure. This is explained in further detail in Annex 20 of our rdWRMP24 (section 6).</p> <p>13) Environmental markets are one way to facilitate greater investment in environmental improvements delivered by technical solutions. A Water Saving Market (WSM) would work by facilitating trade between buyers and suppliers. A well-designed market will have clear governance and operational settings. Affinity Water is investigating the feasibility of a Water Saving Market to deliver water efficiency solutions and support water neutrality. As the only region in the UK with established water neutrality requirements, Southern Water is supporting Affinity Water in this feasibility study, together with Local Authorities from the region.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | <p>14. Given spiralling costs, programme delays, significant environmental effects, the need to operate 365 days a year, lack of legacy and short life-span, the Hampshire effluent recycling scheme cannot represent best value for customers.</p> <p>15. The selection of effluent recycling via Havant Thicket and transfer (40km) to [REDACTED] results in unacceptably high carbon impact and greenhouse gas emissions, more than double that of any other transfer or desalination scheme. (For more detail refer to item M below.)</p> <p>16. SW Preliminary Environmental Information Report (2024) confirmed a likely significant effect on the marine environment from the Hampshire effluent recycling scheme. Modelling for water quality impacts on the reservoir is still not available. The scheme should not move forward until the environmental risks/impacts are known.</p> <p>17. The process of environmental assessment and screening methodology cannot be robust if unsustainable and environmentally damaging schemes like the Hampshire effluent recycling/transfer scheme get through. The scheme that in 2022 when it was selected had the highest environmental impact score.</p> <p>18. For more information on the key concerns and environmental impacts associated with the Hampshire effluent recycling scheme via Havant Thicket Reservoir please refer to the Key Concerns page at this link.<br/>Concerning option selection</p> <p>19. Moving the [REDACTED] abstraction to the tidal limit would be a better, more robust and sustainable solution to protect the whole of the freshwater catchment and restore natural flows in a drought. This is not mentioned as an option that has been considered in the SW Technical Report, nor Annex 20.</p> <p>20. In the future SW indicate they will work with stakeholders to look at moving the abstraction on the River Adur to the estuary (transitional waters) to allow more abstraction (Annex 20, page 30-31) but this is not in the current plan. Moving river abstractions to the tidal limit can have environmental benefits, restoring more natural freshwater flows in rivers to protect the ecology. This scheme should be selected now and prioritised as a more sustainable solution. (Why is the solution of moving abstractions to the lower catchment of rivers not being prioritised for investigation as a more sustainable solution across the region?)</p> <p>21. More challenging targets must be set for delivery of the groundwater borehole schemes and Test Managed Aquifer Recharge Scheme in Hampshire, as they require minimum infrastructure and are within the company's control. Investigation and delivery should commence in 2025 to ensure these schemes are delivered as quickly as possible, to provide at least 13.8 Ml/d to help better manage resources in the catchments and protect the rivers Test and Itchen from drought orders. We need Defra and the regulators to strongly challenge on this to ensure a quicker delivery date. (For more detail refer to item H below.)</p> <p>22. The investigation of other aquifer storage schemes in Hampshire, the IOW and West Sussex is not being prioritised to establish the yield they could provide. This is essential and</p> | <p>North WRZ is one area proposed for the study, as an area with existing water scarcity issues and developmental pressures. SW continues to work with all stakeholders in the SNZ region to support greater understanding of water scarcity issues and explore potential solutions.</p> <p>14) Multiple options were considered during the options appraisal process that was carried out as part of the RAPID gated process to identify alternatives to West Southampton Coast desalination and the HWTWRP consistently scored higher than other options. It was approved by RAPID for adoption as the preferred Strategic Resource Option (SRO) to be progressed in Hampshire. Please see section 3.2 in our fdWRMP24 for more detailed reasoning on why West Southampton Coast desalination was not taken forward beyond RAPID Gate 2.</p> <p>15) Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>16) A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>17) We have engaged an independent consultant for our environmental assessments who are following the standard methodology for these assessments. The investment model takes into account the outcome of environmental assessments and if two otherwise equivalent options are available, it will select the option with lower environmental impact.</p> <p>18) Noted</p> <p>19, 20) We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>21) A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           | <p>should be prioritised and funded urgently so that these schemes can be included as feasible options. (For more detail refer to item G below.)</p> <p>23. Proposed schemes to recycle water currently wasted at the [REDACTED] and Test Surface Water WSW should be prioritised more urgently to help minimise abstraction on the Test and Itchen all the time, not only in a drought (Annex 20, page 32).</p> <p>24. No work is taking place to ensure the alternative Hampshire effluent recycling option using [REDACTED] and a bespoke environmental buffer lake are advanced as a back-up, despite this work having been allocated funding by Ofwat. Nor is there any reference to further investigation of a combined Portswood and [REDACTED] scheme. A scheme previously indicated to be feasible with sites that are closer to where the water is needed. (For more detail refer to item J below.)</p> <p>25. Negotiations with a very large industrial water user in South Hampshire should have been brought forward as a priority, to explore alternative supply options when the contract expires in 2026, to free up drinking water for SW customers in a drought (Annex 20, page 6) and provide more certainty for the plan.</p> <p>Could a desalination plant that trials research into alternative technology, potential uses for the hyper saline solution and reducing energy consumption be a way forward for this site (Annex 20, page 30 refers) perhaps in partnership with industry.</p> <p>26. In West Sussex the need for network upgrades is being used as an excuse not to bring forward schemes at existing works that would increase supply (Annex 20, Appendix A). If all of these schemes rejected for this reason were brought forward, they could deliver more than 20MI/d of water to the Central Region. This is more water than is to be provided by the proposed Littlehampton (Ford) effluent recycling scheme which will discharge to the Western Rother. The necessary network upgrades in West Sussex should form part of the plan. Network upgrades are taking place in Hampshire to address such concerns, why not in West Sussex?</p> <p>27. Across the Western and Central Area the fact that sources 'might not be available in a drought' is being used by SW as an excuse not to increase capacity at existing water treatment works. If the works were upgraded they could be used at higher capacity during normal operation, leaving other groundwater sources that would be available in a drought to rest or be used less, so that more groundwater is available in a drought. Schemes to increase capacity at existing works could deliver 18 MI/d of water across the region and these options should be prioritised. However, SW are less likely to find this an attractive option where the source is surface water because it is cheaper to treat and supply groundwater every day. SW need to plan to use their water sources in a more sustainable way that works with climate change, not just use the cheapest sources first.</p> <p>28. Multiple cheaper and more sustainable schemes have been rejected by SW because they 'cannot be delivered in time' (presumably this means by 2030).</p> <p>17 schemes in Hampshire and IOW (Western Area) could deliver at least 42 MI/d.</p> <p>7 schemes in West Sussex (Central Area) could deliver at least 18 MI/d</p> <p>Yet the effluent recycling scheme in Hampshire which will supply both Hampshire and West Sussex cannot be delivered until 2035 either, and that timescale will almost certainly slip further. SW are putting all of their 'eggs in one basket'. Surely it is better, more resilient and more sustainable to develop multiple smaller schemes, close to where the water is needed, many of which do not even require new consents, just treatment plant or borehole upgrades.</p> | <p>22) Our plan includes two groundwater schemes on the IOW to provided up to 3.4MI/d 2040.</p> <p>23) With regard to prioritisation of recycling water at River Itchen WSW, as noted in the rejection register against these schemes, enhancements to treatment process are needed at these sites to reduce process losses. More crucially, under some of the drought conditions covered by WRMP24, it is unlikely that River Itchen WSW would be running. Therefore, this scheme would provide no supply benefit in a drought. However options to reduce process losses will be considered for WRMP29.</p> <p>24) We are focussed on delivering the HWTWRP by 2033-34. The alternative option to use Fareham for recycling water has not been shelved but is put on hold.</p> <p>25) We will be exploring the option of amending the bulk supply agreement with a large industrial user in HSW WRZ when the existing contract expires in 2026. However, we are not planning to consider any changes to the bulk supply agreement for WRMP24. We mention options relating to this large industrial user in Annex 20 of our fdWRMP24.</p> <p>26) Network enhancements in the Central area were not taken forward as the required enhancements could not be delivered by 2030. These will be reconsidered for WRMP29.</p> <p>27) The amount of water we can abstract from river and groundwater sources are determined by our abstraction licences, which typically specify the maximum amount of water we can take from a source over a year with a limit set on maximum daily abstraction. We cannot take unlimited amount of water from these sources during wet periods.</p> <p>28) Notwithstanding the fact that these 17 schemes are not explicitly identified in this query, there is little benefit in developing 17 schemes by the 2030s when the three schemes we are progressing will deliver the over twice the volume over a similar timeframe. We did not simply reject schemes because they could not be delivered by 2035. Only the schemes that were considered to mitigate the use of drought permits and orders beyond 2030 had to meet the criterion of being deliverable by 2030, because schemes delivered after 2030 would not be able to mitigate the reliance on drought permits and orders beyond 2030.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           | <p>29. SW are still not urgently investigating and bringing forward additional new reservoir schemes in the short to medium term, despite this being customers preferred choice. The delivery of the River Adur project is not scheduled until 2039/40, no other reservoir schemes are in the pipeline in Hampshire or West Sussex in the revised draft plan.</p> <p>30. Groundwater schemes on the Isle of Wight (IOW) are not brought forward as the water gained cannot be transferred to the mainland to help the rivers Test and Itchen in a drought (Annex 20, page 5-6). However, if implemented they would reduce the amount of water that needs to be transferred from Southampton to the IOW providing a benefit that should be pursued.</p> <p>31. The timescale for delivery of ten years should not be seen as a valid reason to reject provision of a bi-directional link between the IOW and the mainland, especially as it could allow water to be used more flexibly in a drought, including use of future spare water from Sandown.</p> <p>32. There has been little proactive work by SW to investigate buying or trading licences with private supply users across the region. In a restricted document supporting the previous draft plan it indicated buying just one licence could deliver 19.7 Ml/d. There should be more proactive investigation and negotiation by SW to buy existing private abstraction licences, this in turn would then open up the potential for a more flexible approach to the use of licences within a catchment to meet water supply needs and environmental objectives.</p> <p>33. Much more effort needs to be put into working with industry, agriculture, golf courses and community buildings (schools, social clubs and so on) to reduce their use of drinking water for non-potable uses. This can be achieved with free surveys and provision of grants to encourage the adoption of more sustainable solutions.</p> <p>34. The free water butt scheme trialled on the IOW should be rolled out across the SW supply area to customers as a priority.</p> <p>35. To read about a strategy for a better way forward please refer to the Water Matters page on 'A better way forward' at this link.</p> <p>Concerning inadequate consultation with water users and affected communities</p> <p>36. Critical documents to understanding and evaluating the options available have not been made available to the public. Instead, SW have classified the Options Appraisal and key environmental assessment reports as restricted. In fact there are more documents restricted in 2024, than there were in 2022. Is this a deliberate play to hide important information? As SW know it is unlikely that customers will be prepared to travel to their Worthing HQ to view these large reports that cannot be properly reviewed in one visit. Other water companies made this information more accessible.</p> | <p>29) We have looked at over 50 reservoir options as part of our options appraisal process over the last 3 WRMP cycles. These are not taken forward due to environmental concerns that will make it difficult to get planning permission. However, we review these options for each WRMP cycle and will review them again for WRMP29.</p> <p>30) Our plan includes two groundwater schemes on the IOW to provide up to 3.4Ml/d by 2040.</p> <p>31) The delivery time of an option is the reason for rejection only in cases where water is needed earlier than the option can be delivered. The delivery time in itself is not a reason for rejecting an option.</p> <p>32) We are open to licence trading. The Sittingbourne industrial re-use scheme in our Kent area is effectively a licence trading scheme that will provide up to 8Ml/d from 2030-31 onward.</p> <p>33) Our water efficiency plan includes helping non-household customers reduce their consumption through smart metering and water audits as well as a collaborative fund to promote water efficiency.</p> <p>34) Regarding water butts, following the success of the pilot scheme, this is now being replicated in Kent, where we are installing more than a thousand free water butts to help reduce storm overflows in Whitstable, Deal, Swalecliffe, Margate and in Fairlight, East Sussex.</p> <p>35) Noted</p> <p>36) Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a</p> |

|           | <p>37. Customer research across the water industry has shown a clear preference for more natural solutions such as aquifer storage, reservoirs and catchment management. Why are SW not listening to their customers and instead pushing ahead with the least favoured options of desalination and effluent recycling?</p> <p>38. Assurances given by SW that water quality modelling and energy use information for the Hampshire effluent recycling scheme would be available in time for the 2024 consultation have not been met.</p> <p>39. Lack of adequate and meaningful engagement /consultation with customers;<br/> – A very significant alteration is taking place to customer's water supply with the source changing from river, spring or groundwater to recycled effluent. SW should be proactively engaging with all their customers to get their feedback on this material change.</p> <p>– SW did not follow the legal requirement for a new statutory consultation on their plan when there was a material change to the option(s) selected in 2021, when the [REDACTED] desalination scheme was rejected, and the WRMP19 back-up option of discharging recycled effluent to the River Itchen was also rejected. When there was a material change to the plan in 2021 SW should have undertaken a comprehensive review of all the available options and a full public consultation. This did not happen.</p> <p>– As a result, communities in the areas affected by the selected options did not have the opportunity to comment at the 'formative stage' of the plan, before the new effluent recycling options were selected.</p> <p>– At the time of previous consultations (2020 to 2022) posters were not even placed at sites impacted to make local communities aware that a consultation was taking place. Nor have posters been placed at impacted sites for this Autumn 2024 consultation.</p> | <p>non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>37) We consulted extensively with our customers and stakeholder before publishing our dWRMP24 and solicited their views on the different option types. However, we have a statutory duty to maintain uninterrupted supply of water in all but the most extreme weather conditions, which may mean selecting options less preferred by customers.</p> <p>38) The water quality modelling and assessments undertaken so far have shown that there are unlikely to be any ecological or biodiversity impacts in the Solent from the water recycling process. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>We made clear in our Summer 2024 Consultation for the Hampshire Water Transfer and Water Recycling Project that water quality modelling and assessment work was ongoing and would be fully reported in our Development Consent Order application. As that work has progressed, we are now consulting on it as part of our Spring 2025 Consultation.</p> <p>As part of our Summer 2024 Consultation, we shared our preliminary assessment of carbon emissions associated with the Hampshire Water Transfer and Water Recycling Project. This was based, in part, on energy usage information for the project. An updated carbon emissions assessment will be provided as part of our Development Consent Order application. The energy usage information used to support that will be appended to the assessment.</p> <p>39) Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> |

|           | <p>40. The consultation documents are vast, very repetitive and fail to provide important information, or make it restricted and inaccessible, making it very difficult for a lay person to understand/get through the consultation reports. Is this intentional?</p> <p>Since this is a 'once-in-a-generation' chance to address future water needs, there needs to be a more open discussion about moving to a more sustainable approach which works with predicted climate change, not against it.</p> <p>More detail on some of these concerns is set out below with page numbers provided to help find the relevant detail in the SW consultation Technical Report.</p> <p><b>A</b></p> <p>The SW revised draft plan does <u>not</u> strive to work <u>with</u> predicted changes to our climate, which modelling has shown means we will get wetter winters and drier summers. We need a complete re-think about how, where and when we take water from the environment. We need a strategy that includes; Moving abstractions (river and boreholes) to the bottom of the catchments, collecting more water in winter and storing it for use in dry summers. This would reduce environmental impacts and allow the extent to which abstraction reform is required to be reduced. Instead, SW plan to leave the current abstractions where they are and 'manufacture' additional water to address the regulatory requirement to reduce impacts on the environment. They plan to build chemical, energy and carbon hungry infrastructure (effluent recycling and desalination), which must operate 24 hours a day, 365 days a year, even though it is intended as a drought resource. Constructing large pipelines to transfer the water long distances (40+km), because the water is not being manufactured where it is needed. The huge amount of energy required, and carbon generated will only add to our problems with climate change and energy insecurity. <b>Now is the time to rethink our strategy and prioritise and invest in more sustainable solutions</b>, not invest in infrastructure heavy unsustainable solutions, which once selected will stop the Company investigating and bringing forward more sustainable solutions for another generation.</p> <p><b>We agree urgent action is needed now to invest to create more robust and resilient water supplies, but what is needed are more sustainable solutions that work with climate change, not against it.</b></p> <ul style="list-style-type: none"> <li>• Moving river and borehole abstractions down catchment to protect the environment and restore more natural flows.</li> </ul> | <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>With regard to the requirement for a full statutory consultation following the removal of the West Southampton Coast desalination option, the deselection of West Southampton Coast desalination was taken at Gate 1 of the RAPID process (outside of WRMP) in September 2021. Southern Water was then instructed by the Secretary of State to submit a draft WRMP in June 2022 (compared to October 2022 for other water companies), beginning in 2023 and covering 27 rather than 25 years. We consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>For more information, see here:<br/> <a href="https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/">https://www.ofwat.gov.uk/regulated-companies/rapid/the-rapid-gated-process/accelerated-gate-two-submissions-and-new-solution-proposals/</a></p> <p>40) We provided detailed information on our rdWRMP24 through a technical report accompanied by 22 annexes. The WMRP, by its nature, is a highly technical plan. We need to demonstrate that our plan is legally and technically compliant with the regulatory framework and that makes the use of technical terms unavoidable. However, we do try to make the plan understandable to a broad audience and therefore included a detailed glossary at the start of our rdWRMP24 main technical report. In addition, we also published a non-technical summary that highlighted key features of our plan</p> <p>Our past performance has not met the expectations of our customers, stakeholders or indeed ourselves. As a result, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |

|           | <ul style="list-style-type: none"> <li>Developing new reservoirs and aquifer storage schemes enable more winter water to be stored for use in dry summers.</li> </ul> <p>SW say this is a once in a generation opportunity to develop more resilient supplies, but we need to take action now to make the right decisions to invest in more sustainable solutions that leave a long-term and positive legacy, not chose unsustainable solutions to manufacture water, which SW see as a quick fix and which makes them a profit, but future generations will regret as they will last no more than 60 years!</p> <p><b>B</b></p> <p>The SW <b>proposal to continue to rely on and extend the use of the Candover Drought Option (augmentation boreholes) and drought permits (page 138-139) should not be permitted beyond 2030</b>. Instead SW should be required to move the [REDACTED] river abstraction to the tidal limit to allow natural flow to be restored in the freshwater catchment during a drought, bring forward their groundwater borehole schemes in Hampshire sooner, plus actively investigate and bring forward additional aquifer storage options. <b>SW should not be allowed to continue to use these drought options/ orders while they just wait for the Hampshire effluent recycling/transfer scheme to be delivered, as it is inevitable that the recycling scheme will be delayed further and will not be available in 2035</b>. Having failed to understand the risks of the [REDACTED] desalination scheme, which led to its inevitable rejection, SW should not be allowed by Defra and the regulators to repeat the same mistake and put 'all of their eggs in one basket' for a scheme that involves new technology to the UK, significant environmental risks, and has no guarantee of delivery. As a minimum a twin track approach on water resource development in Hampshire must be adopted for the short to medium term.</p> <p><b>C</b></p> <p>It is unbelievable that in Hampshire <b>SW now propose to tanker water from Norway in a drought</b> instead of proactively investigating more sustainable solutions such as moving the [REDACTED] abstraction on the River Itchen to the tidal limit, or capturing more winter rain and storing it for dry summers. Tankering 45 Ml/d is equivalent to moving 18 Olympic size swimming pools of water every day. On page 136 of their revised draft plan SW acknowledge "considerable risks and uncertainties remain, especially around water quality and our ability to mitigate the identified environmental impacts linked to both tankering and transferring water from the port (<i>Southampton</i>) to Test WSW site via temporary pipeline". On page 31 SW confirmed; "The Board acknowledges that the <b>implementation of bulk import by sea tankers presents a number of deliverability challenges (which had previously resulted in it being rejected)</b>". A solution the GMB union (who represent water industry workers) described as "farcical and ridiculous", noting that; "The UK uses just a tiny amount of the rain that falls from our skies. Private water companies have utterly failed to invest in the infrastructure needed to capture more and reduce the need for farcical plans like this". <b>Tankering water from Norway cannot be accepted as a credible plan</b>. The cost to customers will be enormous, including fixed annual costs and reservation charges even when the water is not required (Annex 20, Page 11). The environmental impact will be huge, in addition to the massive energy and carbon impacts, the temporary pipe would be placed "along the banks of the River Test" (Annex 20, Page 9). It is hard to believe that private landowners along the river will give their consent.</p> | <p><b>B</b></p> <p>WRSE modelling has demonstrated that, without the use of drought options in Hampshire beyond 2030, there are unresolved supply demand deficits. This makes a WRMP non-compliant so the extended use of these drought options is regrettable but, ultimately, essential. We discuss scheme delays in more detail in Annex 4 of our SoR in response to the EA point R1.1.</p> <p><b>C</b></p> <p>We have listened to the consultation feedback and no longer include sea tankering from Norway in our plan. This is primarily for environmental reasons. We explain this in more detail in our main fdWRMP as well as in relevant annexes such as fdWRMP24 Annex 20.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>There is a risk of importing non-native species to the River Test catchment when the water is stored at existing lakes alongside the river, or if the temporary transfer pipe from the port leaks or bursts. There are water quality issues as the water is soft, has a low pH, low total dissolved solids and even in Norway has to be re-mineralised before use (Annex 20, Page 9). What if the transfer pipe leaks into the river? <b>What will be the impact on fish and the wider river ecology?</b></p> <p><b>D</b></p> <p>SW are unnecessarily pessimistic and over precautionary in the choices they make which creates a much higher demand forecast, which in turn helps them to justify very large infrastructure projects, from which they can make a large profit. For example; tUsing even higher growth forecasts of population for the period 2025 to 2050 than in the last draft plan (page 82), even though the industry regulator Ofwat has confirmed they can use the much lower Office of National Statistics (ONS-18) population growth, the figures which most closely aligns with the core strategy in the Ofwat guidance (page 118).</p> <p><b>Note:</b> The information provided on population growth is also contradictory with the Technical Report indicating a growth forecast of 23% by 2025 is used and Annex 14 referring to a 17% increase by 2050. Surely that level of population growth is not credible?</p> <ol style="list-style-type: none"> <li>Assuming high levels of abstraction reform when what is required is currently very uncertain as their environmental studies are ongoing. Page 118 confirms they are using high environmental destination targets, which go further than BAU+ and Environment Agency Enhanced Scenarios.</li> <li>Assuming there will be no abstraction at all on the Rivers Itchen and Rother, not even in winter when the river levels are high or in flood. Page 107 states; "We have been ambitious through our 'alternative' scenario and are investigating the solutions that would be required to <b>allow us to stop <u>all</u> abstraction in our most sensitive catchments including the River Itchen</b> and lower River Rother and River Arun to remove any potential risk to designated wetlands, <b>going <u>beyond</u> the required reductions just to meet flow targets</b>".</li> <li>Used the supply forecast sequences that <b>move to a 1-in-500 year drought resilience sequence by 2040-41</b>. "As the choice of timing to move to 1:500 resilience is within company control, we have also explored alternative dates for achieving the 1:500 drought resilience through sensitivity analysis" (page 115).</li> </ol> <p>Using these assumptions helps SW to forecast a much higher demand sooner, then they <b>use this to help them dismiss more sustainable options on the basis they are too small to meet the demand. The 2024 plan demand forecast should be based on more moderate predictions of population growth and abstraction reform</b>, with the proactive investigation of more sustainable solutions to meet immediate needs in the interim. More pessimistic forecasts should only be used when they become more certain.</p> <p><b>Note:</b> Ofwat previously indicated that effluent recycling at the smaller volumes originally proposed by SW was not cost effective. By driving up the forecast demand SW are trying to justify a greater need and thus a requirement for a larger plant. The costs then go up and perversely SW make this very expensive infrastructure more acceptable to Ofwat (the water industry financial regulator).</p> | <p><b>D</b></p> <p>For dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwelling occupancy, population in commercial properties and business counts. Following the publication of the latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered for each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>If the 23% growth that you mentioned in our draft plan is from table 5.2 then that is one of a number of scenarios we have considered for net growth from 2025 to 2075. A growth value of this size is credible and is not inconsistent with the Annex 14 estimate of a 17% increase between 2025 and 2050.</p> <p>Our fdWRMP24 has considered numerous scenarios relating to different rates of population increase, climate change and environmentally driven changes to the use of our existing</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

--------------------------------------------------------------------|
|           | <p><b>E</b></p> <p>Assuming no abstraction at all from the Rivers Itchen and Rother (page 107) is not appropriate and makes no sense.</p> <ul style="list-style-type: none"> <li>• <b>Water can be abstracted in winter with no significant adverse impact</b>, and abstraction can help to reduce flood risk.</li> <li>• The <b>abstraction can be moved to the tidal limit to protect the whole of the freshwater catchment</b>, while complying with Water Framework Directive Guidance for transitional waters (estuaries). This would be extremely beneficial in a drought, restoring the natural freshwater flow of the river for the benefit of the ecology and geomorphology. This would require minimal new infrastructure compared to the high infrastructure solutions being proposed by SW and would be much cheaper for customers. However, this is not mentioned as an option in the Technical Report which supports the revised draft plan, nor in Annex 20 (Appendix A).</li> </ul> <p><i>Note: If initially the current [REDACTED] abstraction volumes were permitted to be taken from a new abstraction at the tidal limit, they can still be reduced over time as new solutions come on line by having a 'time limited' more flexible licence which is subject to regular review and takes into account the timing of fish migration. In the meantime, natural flow could be restored to more than 12km of the River Itchen, including in a drought.</i></p> <p><b>F</b></p> <p>Despite there being an ongoing <b>Hampshire Grid scheme</b> which will improve connectivity of the SW distribution network in Hampshire which was due to be delivered in 2028, SW have <b>chosen to ignore these improvements</b> and they have not reviewed or merged the boundaries of water supply zones in Hampshire for the revised draft plan period 2025 to 2050. SW have indicated they will not do this until they develop the 2029 WRMP (page 35), so <b>the benefit of recently funded improvement programmes are not being taken into account in the current draft plan</b>. As the Company option review and selection process is based on individual supply zones (page 118 and 132 confirm) including assessing whether there are sufficient options in each zone, and whether there is sufficient connectivity?, <b>this may be adversely impacting the decisions being made for the Hampshire Zones, the volumes of water needed under different scenarios and the options being considered</b>. The fact that zones are still broken down in Hampshire and assessed individually is likely to have disadvantaged more sustainable option selection. <b>Taking into account the ongoing development of the Hampshire Grid could have changed the options appraisal process</b>.</p> <p><b>G</b></p> <p>SW state on page 131 that the location of Aquifer Storage Recharge (ASR) options would be limited to locations with suitable geology. This is true for where the storage would actually take place, but rather implies SW may have been dismissive of these more sustainable options for this reason. There is no recognition that if the new 'Hampshire Grid' is operational (as it will be soon due to the ongoing improvement programme), and you take into account that water can be transferred into the SW Hampshire supply area through the Portsmouth Water network,</p> | <p>abstractions. Because our plan is an adaptive plan (as described in section 5.5 of our fdWRMP24) it means that when actual changes to population of abstraction licences are more certain, our plan can take a different pathway. This provides flexibility. Whilst you are encouraging the use of more moderate predictions of population growth and abstraction reform there are other stakeholders asking us to go further and faster. Our fdWRMP24 strikes the balance between being ambitious and not developing more schemes more quickly than is likely to actually be required.</p> <p><b>E</b></p> <p>On page 107 of the WRMP24 we consulted on in 2024 we said "We have been ambitious through our 'alternative' scenario and are investigating the solutions that would be required to allow us to stop all abstraction in our most sensitive catchments including the River Itchen and lower River Rother and River Arun to remove any potential risk to designated wetlands, going beyond the required reductions just to meet flow targets."</p> <p>What we are describing here is an 'alternative' scenario that we have considered. This is not our preferred plan.</p> <p>On the point about moving abstraction points - We have considered moving our abstractions on the River Itchen further downstream. As part of our 2009 and 2019 plans (WRMP09 and WRMP19), we considered its relocation to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not considered viable because of the potential impacts on Portsmouth Water's abstractions in the area and on migratory fish. We also considered moving the abstraction point downstream, close to the tidal limit and pumping the water to Portsmouth Water's water supply works on the River Itchen. This would have</p> |

|           | <p>this <b>allows excess water to be collected in winter and stored in <u>any</u> suitable confined aquifers across almost anywhere in Hampshire and West Sussex</b>, where SW have large supply shortfalls in a drought. SW have previously identified a number of aquifers across this area (including on the IOW) with the potential for aquifer storage, but not progressed them to the investigation stage, instead they 'parked' them for further consideration in 2029, wasting a further five years, when such schemes could play a key part in meeting short and medium term needs. This is an example of where <b>there has not been the will to properly investigate more sustainable options</b>, and where the decision not to rezone Hampshire for this latest revised draft WRMP assessment could have had a significant adverse effect on the option selection process. <b>If a number of aquifer storage schemes were developed, each with a relatively small yield, this could make a significant difference to provide sustainable water sources in a drought</b>, especially in the western area. Tests in Dorset have previously shown that aquifer storage and recovery is feasible in confined sections of the chalk.</p> <p><b>H</b></p> <p>We are pleased to note on page 25 (Technical Report and Annex 20 pages 5 and 6) that some <b>groundwater schemes have been brought forward</b> as the local community had advocated since 2022 including;</p> <ul style="list-style-type: none"> <li>• Drilling new boreholes at Romsey to provide 4.8 Ml/d by 2030-31;</li> <li>• Removing constraints at Kings Sombourne groundwater source to provide additional 2.5 Ml/d from 2030-31;</li> <li>• Implementing Test Managed Aquifer Recharge scheme to provide up to 5.5 Ml/d from 2035-36.</li> </ul> <p>However, given the very limited infrastructure required (see pages 164-165 and 169) regulators <b>need to challenge why these new water resources cannot be brought on line sooner</b> to provide 13.8 Ml/d to help better manage resources in the catchments and protect the Rivers Test and Itchen from drought orders.</p> <p>While some environmental studies and trials will be needed a previous SW estimate for developing the Test MAR scheme was six years including the trials. The initial assessment was also that the yield could potentially be significantly higher. Two years have already been wasted. If work started immediately this drought resource could potentially be available by 2030. <b>A more challenging target should be set for delivery of these schemes</b>, especially as these options are completely within SW control and not dependent on other water company input.</p> <p>The option to recommission Chilbolton near Andover was rejected as it only provides a small benefit (0.5 Ml/d) to one zone, but not the Test or Itchen (Annex 20, page 5). <b>SW need to investigate if there is an option to better connect zones to enable this resource to be utilised</b> as part of the Hampshire Grid project?</p> <p><b>I</b></p> <p>SW indicate that they have used costs (CAPEX and OPEX) from 2021 (page 134/135). For the Hampshire effluent recycling scheme the costs have spiralled since 2021, CAPEX and OPEX costs have gone up considerably since the Gate submission. The costs developed in 2020-21</p> | <p>required a significant increase in the treatment capacity of Portsmouth Water's water supply works. This option was not taken forward due the potential impacts of a large abstraction on the River Itchen's downstream ecosystems. We will reconsider this for WRMP29.</p> <p><b>F</b></p> <p>The WRSE modelling that underpins this WRMP and those of other companies in the region accounts for the Hampshire Grid. Therefore the options appraisal also accounted for this. On the point about zones, it is not appropriate to alter the water resource zones used in our WRMP24 until the grid scheme is complete. This explains why this needs to be considered in the WRMP29 rather than the WRMP24.</p> <p><b>G</b></p> <p>Appendix C of Annex 20 to our fdWRMP24 describes ASR and MAR options in more detail.</p> <p><b>H</b></p> <p>Even if new sources require a limited amount of infrastructure there are still regulatory and other processes to complete before new sources can be delivered and made operational. For example, any potential changes to abstraction require approval from the EA and, on some occasions, Natural England. Also all new sources need to meet the strict requirements of the DWI.</p> |

|           | <p>are definitely out of date as costs have spiralled to a minimum of £1.2 billion. <b>If the best value assessment of the option is based on 2021 costs it will be flawed.</b></p> <ul style="list-style-type: none"> <li>• If the true costs of the effluent recycling scheme via Havant Thicket Reservoir were known in 2021/22 would the scheme have been selected as best value?</li> <li>• In the light of the known minimum £1.2 billion price tag has the schemes selection been robustly reviewed? Regulators need to look at this carefully.</li> </ul> <p>Reference is made on page 138 to additional costs included of £96.8 million for new treatment (ceramic membrane filtration system) at [REDACTED] to treat the recycled water.</p> <p>– <b>What additional treatment will be needed at Farlington WTW before supply of recycled water to Portsmouth Water customers, and has that been included in the costings?</b></p> <p><b>J</b></p> <p>No work is taking place to ensure the alternative effluent recycling option using [REDACTED] and a bespoke environmental buffer lake are advanced, even though SW received Ofwat funding to progress investigations. Page 137 confirms; “Earliest delivery delayed from 2030-31 to 2037-38 to allow additional time in case the preferred option cannot be progressed”. <b>There is a concern that SW are manipulating the situation to ensure that at the Development Consent Order application stage for the Hampshire effluent recycling/ transfer scheme the Company will be able to argue there is no viable alternative available, in the timescales needed</b> to meet the Company commitment to EA and NE for abstraction reductions on the Rivers Test and Itchen. Hoping that this will push the scheme through despite their being likely significant environmental effects. When effluent recycling from [REDACTED] WWTW could provide a source closer to where the water is needed, which is cheaper to operate and potentially has less environmental impacts.</p> <p><b>K</b></p> <p>SW indicate on Page 148; “ When making a decision about inclusion of an option, the Investment Model (IVM) used looks to see if it is economic to defer investment until after 2030 and only includes investment in the 2025-30 period if it is economic to do so once all the futures after the 2030 and 2035 branch points are considered”. This sounds like SW are deliberately manipulating the model to prevent the selection of smaller more sustainable schemes until after 2030, <b>in favour of continued use of drought permits on the Test and Itchen, and the selection of larger schemes which cannot be delivered until later, to make sure the Company get the solution they want selected, which delivers more guaranteed profits.</b> This is not acceptable we need the model to freely select and bring forward the development of smaller more sustainable local solutions now. If that pushes back the delivery timescale for when effluent recycling is needed that is a good thing, as it allows time for advances i more sustainable technology for effluent recycling and desalination to be developed. <i>Note: A report commissioned by SW indicated that the development of nanotechnology could be a game changer for the viability of desalination in the near future</i> The Investment Model used prioritises continuing abstraction from rivers in a drought (options/ permits) over other solutions as that is cheaper, even when other options are available (page 154). <b>The criteria the investment model is using are clearly flawed</b>, relying on manual interventions to force</p> | <p>As mentioned earlier our WRMP and the WRSE regional modelling accounts for the future delivery of the Hampshire Grid.</p> <p><b>I</b></p> <p>The costs used in the WRSE investment model have a consistent cost base as set out in the WRMP guidelines produced by our regulators. It would be in appropriate to update costs for one option in isolation. The crucial point is that a comparable cost base be used across the whole region. This is how the WRSE modelling has been carried out.</p> <p>The costs associated with treating recycled water have been accounted for in the costings used in the WRSE modelling.</p> <p><b>J</b></p> <p>The Water for Life Hampshire programme is progressing in line with the gated process set out by RAPID. This RAPID process contains numerous phases on public consultation and the options selected are those that score highest on the strict criteria used, which includes environmental impacts. All the RAPID submitted documents for gate 1, 2 and 3 along with the query responses are here: <a href="#">Water For Life – Hampshire Technical Documents</a></p> |

|           | <p>more appropriate option selection in the early years of the plan, when SW chose to do so. This is likely to be one of the reasons why other more sustainable options have not been selected in the past. <b>The regulators need to scrutinise the modelling carefully to ensure that sustainable solutions are not held back.</b> The model should have been updated as a priority before the plan was revised, not after. Additional more sustainable options that have previously been 'parked' by SW and may not even make it to the investment modelling stage as potentially feasible options also need to be brought forward so that they can be selected for investigation. For example, moving abstractions to the tidal limit and aquifer storage options. <b>If they are not selected in the plan they will never get funded to assess the yield they could provide. This then becomes a 'negative loop' where they cannot be selected because SW say they don't know what yield they could deliver.</b> Without funding for investigation SW will continue to make the same excuses for not selecting these options in 2029. Without selection in the this plan the necessary investigations will not be funded.</p> <p><b>M</b></p> <p><b>Effluent recycling via Havant Thicket and transfer (40+km) to [REDACTED] results in unacceptably high carbon impact and greenhouse gas emissions.</b> Page 251 confirms that the individual scheme with the largest greenhouse gas impact is the bulk import from Havant Thicket Reservoir to [REDACTED]. SW estimate that emissions will be 898 ktCO<sub>2</sub>e (Figure 10.1), <b>more than double that of any other transfer or desalination scheme.</b> It is not even clear if that figure includes the emissions from the effluent treatment process. Page 252 acknowledges; "The water sector accounts for nearly 1% of UK greenhouse gas emissions and has an important role to play in tackling these ahead of the UK's 2050 target". Stating SW are; "Ensuring carbon is a key focus by instilling carbon conscious decision-making and processes into the Southern Water culture" If that were the case how is effluent recycling selected? SW have committed to being net zero carbon by 2030, yet this energy and carbon hungry scheme is selected for 2035. <b>There is no indication that SW are striving to plan in a sustainable way when this plan selects the highest carbon and green house gas emission options in the short term (tankering from Norway) and in the medium to long-term effluent recycling via Havant Thicket Reservoir with a 40+km transfer pipeline to [REDACTED], and later 32+km pipeline into West Sussex.</b> Southern Water Consultation Library document link Southern Water documents run to 32 volumes of detailed content with 156Mb of downloadable files. Other 'restricted' documents, including their Options Appraisal, Option Fact Files and key appendices from their environmental assessments have <b>not</b> been published by Southern Water. The full set of publicly available Southern Water consultation documents can be found in the following 32 volumes.</p> | <p>K</p> <p>The IVM used by Southern Water and the other WRSE companies (who have now had Defra approval to finalise their WRMP24) is run in a way that aligns with the WRMP guidance set by our regulators. The model, its criteria and the way it is used are robust and have been subject to assurance. However, as mentioned earlier drought options in Hampshire are essential after 2030 in order to prevent unresolved deficits.</p> <p>M</p> <p>We have responded to the points relating to greenhouse gases earlier. For example, you can find out more about our carbon policy here: <a href="https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/">https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/</a></p> |

| WRMP49    | <p>I am really concerned about the proposal to store treated sewerage in the proposed reservoir. This was not the original proposal, one that I could get behind. As soon as it was agreed then this latest proposal was put forward. I think it is a terrible idea. To sell this as a nature reserve is dishonest. Treated sewerage still contains hormones and pharmaceutical s in the water as well as other toxins.</p> <p>If you need additional water why do you not divert the lavant as it flows through Finchdean and Rowlands Castle. Thousands of gallons of water comes off the downs travels through the ford and floods local land.</p> <p>Maybe consider collecting this instead</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>To clarify, the water stored in the proposed reservoir would meet stringent regulatory standards for water quality. Advanced treatment technologies are capable of removing a wide range of substances, including pharmaceuticals and hormones, ensuring that any water introduced into the reservoir is safe and suitable for further treatment before entering supply. The use of treated wastewater recycling is a proven and sustainable method already in operation in other parts of the world, helping to secure resilient water supplies while reducing pressure on natural sources. Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>In response to your comment that the effluent recycling was not in the original proposal, the WRMP process involves the re-drafting of the WRMP in response to stakeholder and public feedback. Therefore, it goes through several iterations and the most appropriate solutions assessed and chosen.</p> <p>Regarding the Lavant, we have explored a wide range of potential water sources, including surface water abstraction, and continue to assess all viable options. However, diverting the Lavant is not a feasible alternative due to its highly seasonal nature, with periods of high flow in winter but little to no flow in summer when demand is highest. Additionally, environmental regulations protect natural watercourses from excessive abstraction to safeguard biodiversity and local ecosystems.</p> <p>We recognise the importance of transparency in communicating our proposals and will continue to engage with local communities to address concerns, share evidence, and ensure the best possible solutions for long-term water resilience. We welcome further dialogue and feedback as we refine our plans.</p> |
| WRMP50    | <p>I am shocked and saddened by Southern Water's renewed plans for Havant Thicket Reservoir.</p> <p>I am concerned for my environment, the people in this area and I am angry at the betrayal that what was supposed to be an attractive amenity will now be sullied and spoilt.</p> <p>I object in the strongest terms to this ill conceived and poorly thought out plan.</p> <p>Please will you ensure that Southern Water stop this and are advised by you not to bother resubmitting another similar proposal.</p> <p>Thank you for your attention in this matter.</p>                                                                                                                          | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We understand the strength of feeling in your response and appreciate the opportunity to clarify our position on the Havant Thicket Reservoir proposals. The reservoir remains a vital part of securing long-term water resilience in the South East, an area facing increasing pressures on water supply due to population growth and climate change. We recognise that expectations around its purpose and design have evolved, and we are committed to ensuring that it remains an asset to the local community as well as a sustainable water resource.</p> <p>The reservoir will still provide an attractive amenity, with plans for extensive landscaping, biodiversity enhancement, and recreational opportunities. The introduction of treated</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

The water will meet strict regulatory standards, ensuring it is safe for both public use and the surrounding ecosystem. This approach is already used successfully in other regions globally to enhance water security while minimising the need for additional abstraction from sensitive natural sources.</p> <p>We acknowledge your concerns and are committed to ongoing engagement with the community to address them transparently. However, securing sustainable water supplies remains a key responsibility, and we must explore all viable solutions to meet future demand. The proposals will continue to be subject to rigorous scrutiny by regulators, and we will ensure that all feedback is carefully considered in shaping the final plan.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP51    | <p>Submission to Defra regarding the Southern Water development plans</p> <p>As a customer of Southern Water and concerned citizen I am compelled to write to express my summary of your business and ethical conundrum – and to offer a perspective for your consideration.</p> <p>The situation: Southern Water must supply water to a rapidly increasing population in southern England. Southern Water has an obligation to its shareholders to make a profit. It must also operate within constraints dictated by national government; these constraints encourage the building of infrastructure as it is upon such initiatives that profits can most readily be made. The difficult question: On the one hand, and in the short term (the next decade) it is rational for Southern Water to propose effluent recycling as a major component of its planning (while largely ignoring such issues as leakage reduction) as it assures:</p> <ul style="list-style-type: none"> <li>i) Supply to customers</li> <li>ii) Profitability</li> <li>iii) Adherence to nationally imposed constraints.</li> </ul> <p>On the other hand, such an expensive, energy intensive, greenhouse gas emitting, short-term “business as usual” proposal will contribute to the extinction of human civilization over the next 50 years. Doubtless this last statement will raise your hackles, but it is correct. A few of the current rich may survive if our world continues on its current trajectory, but not in the comfortable world we enjoy today. The facts are on the table.</p> <p>Resolving this dilemma: Southern Water surely agrees that we should always maintain hope for the future of humankind and act accordingly. A longer-term solution must be found if Southern Water is to emerge as a responsible player in this remarkable world. Solutions have been offered by many parties with the simplest being the building of a further two reservoirs and reliance on the expected higher winter rainfall due to our changing climate. Southern Water is at a crossroads - it can either fall into the trap it is proposing or show prudent leadership. Over to you, Defra and Southern Water – please be Aware, think Big and Care – the ABC of good management.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Thank you for sharing your perspective on the challenges facing water supply in the South East and the broader ethical considerations of long-term sustainability. We fully acknowledge the scale of responsibility we hold in securing water resilience for future generations while minimising environmental impacts.</p> <p>Southern Water must supply water to a rapidly increasing population in southern England. In addressing this, our approach is not driven purely by short-term considerations but by a legally required, evidence-based assessment of all available options. Our Water Resources Management Plan (WRMP) takes a long-term view, balancing supply and demand while incorporating a range of solutions, including leakage reduction, demand management, and new supply infrastructure.</p> <p>On the question of additional reservoirs, we are working closely with Water Resources South East (WRSE) and other regional water companies to explore a wide range of solutions. Reservoirs play an important role in our long-term plans, but they require significant land, long lead times, and careful environmental assessment. Meanwhile, the impact of climate change is highly uncertain—while some models predict increased winter rainfall, others indicate more prolonged droughts, meaning reliance on seasonal storage alone is a high-risk strategy. A diversified approach, rather than reliance on a single solution, is essential to ensuring a secure supply.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment, supporting wildlife, particularly in a drought. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>We are planning to build two reservoirs: the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision</p> |

We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We appreciate your call for prudent leadership. Southern Water remains committed to a balanced, evidence-led approach that ensures a sustainable and reliable water supply while minimising environmental harm. We welcome continued engagement and dialogue as we work towards solutions that benefit both present and future generations. Thank you again for taking the time to share your views.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP52    | <p>I have serious concerns about pumping recycled effluent water and adding it (without planning permission) to the raw water, which is planned for and approved to fill the new reservoir under construction in Havant Thicket.</p> <p>19% of treated drinking water is lost due to leaks. Southern Water should prioritise repairs to the infrastructure to reduce leaks far more quickly than currently planned.</p> <p>Southern Water's scheme is costly and environmentally damaging.</p> <p>Capture of rainwater should be a priority with additional reservoirs. Also aquifers can be refilled to help store water until it is needed.</p> <p>There are sure to be many more less damaging and more cost effective ways of securing our water supply into the future. Please consider putting together several/many sustainable water schemes rather than accept what Southern Water is proposing.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>In response to your concern regarding planning permission, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>With regards to water storage and your suggestion of additional reservoirs, we are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Regarding your suggestion of water storage in aquifers: A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>At a household level, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community-level initiatives. Based on typical rainfall in the UK, by fitting a water butt to your gutter and downpipe, you could save up to 24,000 litres of water a year – which is one reason that our business customers are able to claim a free water butt from us:</p> <p><a href="https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/">https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP53    | <p>I object to the proposed scheme to send treated sewage to Havant Thicket Reservoir. I understand the need to treat all sewage rather than discharging it to the sea but if there are government restrictions on how infrastructure investment is funded and raised and spent then this needs to be relaxed to ensure all the water treatment companies focus on their responsibility to the environment on behalf of their customers.</p> <p>In addition, originally Portsmouth Water were keen to encourage the use of Havant Thicket Reservoir for recreational use, as is all other UK reservoirs.</p> <p>At around the same time as the Southern Water sewage recycling scheme was introduced the recreational use of the reservoir was dramatically decreased. I believe the two are linked and once the threat of deliberate sewage contamination as been removed then recreational use of the reservoir can return.</p> <p>The stated reason for restricting recreational use of the reservoir by Portsmouth Water was the risk of water level changes. This risk is completely imaginary as the vast majority of recreational users of the entire Solent seem to manage perfectly well with the five metre change in water level, every 6 hours. I severely doubt that there exist on this planet human constructed water pumps that could achieve the same effect on a body of water the size of Havant Thicket Reservoir.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The water recycling proposals are not expected to impact the proposed recreational use of the reservoir. Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Thank you for sharing your concerns regarding the recreational use of Havant Thicket Reservoir and its relationship to the water recycling proposals. We would like to clarify that there is no link between the introduction of treated wastewater recycling and any changes to the planned recreational use of the reservoir. The reservoir has been designed to provide both a secure water supply and a valuable public amenity, and we remain committed to ensuring it benefits both the environment and the local community.</p> <p>The decision by Portsmouth Water to limit recreational activities is based on safety considerations, particularly the potential for fluctuating water levels. Unlike tidal environments such as the Solent, where water movement is predictable and gradual, reservoir water levels can vary significantly over time due to operational requirements. The management of water levels is dictated by multiple factors, including drought conditions, supply needs, and environmental regulations, and cannot be compared to tidal fluctuations.</p> <p>We understand that recreational access is important to the community, and we are working closely with Portsmouth Water to ensure that public access is provided wherever it is safe and appropriate to do so. We remain committed to engaging with stakeholders to balance water security, environmental protection, and community benefits in the best way possible.</p> <p>Thank you for taking the time to share your views.</p> |
| WRMP54    | <p>I live in Rowlands Castle where the Havant Thicket Reservoir is currently under construction. I am in favour of this but have become concerned about other issues. We live in a country which is often very wet in the winter and recently and, more importantly, projected to be drier in the summer due to climate change. I have read the Havant Matters - Water Matters publication and have a few comments I would like to make. Firstly I do not pretend that I understand about the "Hampshire Grid Project" but I would say that transferring water via pipelines from one area to another is complete madness when smaller</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. We note your objection to the Hampshire grid improvement scheme.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           | <p>storage areas, reservoirs/lakes or aquifers near the places where water is required would surely be a more acceptable idea.</p> <p>Positioning some of these storage areas at the mouth of our rivers before they discharge to the sea would be a better solution.</p> <p>Tankering in water from Norway would be absolutely stupid both ecologically and environmentally and also at huge cost. We do have copious amounts of "free" water each winter - we are just not storing it properly.</p> <p>A lot of water is wasted through leakage from old supply lines and it would probably be more cost effective to repair these leaks which account for a huge amount of wasted water.</p> <p>Lastly - when planning new estates what about having two water supplies to each new house - one for drinking water and one, non potable, for watering the garden or cleaning the car etc. Obviously I have no idea whether or not this would be possible but it might help the situation in the long term.</p> <p>Please read the Water Matters publication as it contains some sensible ideas and suggestions and also some real concerns.</p>                                                                                                                                                                                | <p>Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, at the individual customer level. This would also require the entire housing stock across our supply area to undergo modifications in internal plumbing. We do not consider this to be a realistic option. We are working with developers to recycle as much water as possible on new developments at the site level. We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> |
| WRMP55    | <p>To whom it may concern,</p> <p>I am writing to object against the use of the new reservoir for recycled sewage to be mixed with the most beautiful water from the South Downs.</p> <p>Some of the reasons being:</p> <p>There seems to be huge concern about the environmental impact of the effluent recycling scheme, including significant impacts associated with the concentrated reject water discharge to the Solent.</p> <p>Greener and cheaper alternatives are not being properly investigated &amp; brought forward.</p> <p>This seems to not be a sustainable solution, especially building it more than 40km from where the recycled water is needed. The treatment &amp; energy costs to transport the water 365 days a year will be huge.</p> <p>Energy security is already a significant concern, developing energy intensive solutions makes things worse for energy security and the planet.</p> <p>Very expensive solution which is not supported by customers, minimum £1.2 billion, with costs spiralling, making it very hard to believe that it will provide 'best value' for customers.</p> <p>Totally inadequate public consultation on the alternative options and consumer acceptability. You could build 3 reservoirs to store winter rainfall for the cost of this effluent recycling scheme.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>Regarding environmental concerns, we acknowledge the importance of ensuring that any potential impact from concentrated reject water discharge into the Solent is assessed and mitigated appropriately. Our regulatory approvals include scrutiny of environmental effects, and we are working with relevant authorities to ensure compliance with environmental protections.</p>                                                   |

|           | <p>It risks turning people away from tap water due to the lack of trust in the water companies, creating a new used plastic water bottle mountain, especially as mixed reservoir water will taste different to spring water. This will definitely be the case for our household.</p> <p>Loss of a unique biodiversity opportunity to create a chalk spring fed reservoir. The impacts on reservoir water quality and biodiversity are still unknown.</p> <p>Significant additional risk of pollution from the recycling plant, especially if it is not maintained properly by Southern Water. No independent monitoring of the discharge into the reservoir is planned.</p> <p>This means a breakdown of trust in both Southern Water and Portsmouth Water.</p> <p>SW lose 100 million litres of water every day to leaks, that is 19% of all the water they abstract from the environment, which customers pay to treat, wasted through leakage in their distribution system. Without a more ambitious mains replacement programme they will never get leakage under control.</p> <p>I hope that you will reconsider this approach and will look into finding more sustainable natural solutions, using the pure South Downs water without mixing this with recycled sewage.</p> <p>Thank you for your consideration and time.</p> | <p>On the matter of energy security, we are committed to managing our energy use responsibly. We recognise that energy-intensive solutions can have wider implications, and we are incorporating energy efficiency measures as part of our investment plans. Our Net Zero Plan outlines actions to mitigate greenhouse gas emissions associated with our WRMP24 strategy.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We understand concerns regarding alternative options. Our Water Resources Management Plan is developed through an options appraisal process to evaluate all feasible solutions. Reservoirs are part of our long-term strategy. We are currently developing two new reservoirs, Havant Thicket Reservoir and SESRO, with an additional potential site under consideration. Alternative options are continually reassessed in successive WRMP cycles.</p> <p>We have undertaken an extensive consultation process to ensure transparency. Our consultation engagement with customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report. In addition to publishing our documents online, we arranged eight roadshows across our supply area in October-November, where Southern Water staff were available to answer questions. We also hosted five area-specific webinars and publicised the consultation through press releases, social media, and direct communications with MPs, stakeholders, and previous respondents. We have received 1,176 responses as part of the rdWRMP24 consultation process.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP56    | <p>Dear Sir,</p> <p>I wish to express my disquiet at Southern Water's proposals to send treated sewage to Havant's reservoir.</p> <p>We were sold the plan for the reservoir as an amenity for the local area. It was to fill naturally with our ready supplies of clean spring water and rain water.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Your objection to the use of recycled water in Havant Thicket is noted. Our Water Resource Management Plan not only has to look at our water needs for the next 5 years but also needs to consider projections up to 2075. This includes understanding changes to our water supply needs and the impacts of climate change and population growth. Additionally, all water company Water Resource Management Plans must now leave more water in the environment</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>Southern Water's proposal was added later. Southern Water has a poor reputation with regular discharges of raw sewage. I have no confidence that their future performance will improve.</p> <p>I do not think that the reservoir would need 'topping up' with treated sewage water.</p> <p>An episode of raw sewage entering the reservoir, which on past performance I am not convinced would not occur, would taint it forever.</p> <p>Even if such an event did not happen worry over water quality could lead to bottled water being purchased with an increase in plastic pollution.</p> <p>I can think of no positives to the Water Resources Management Plan. Scrap it now.</p> <p>Yours faithfully</p>                                                                                                                                                                                                                                                                                                                                                                                       | <p>for the benefit of plants and wildlife. This means that water companies must explore alternative supply and storage options, including water recycling.</p> <p>The HWTWRP scheme employs global best practices, incorporating a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket Reservoir. The treatment plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if any parameters move outside treatable limits. No untreated wastewater will enter Havant Thicket Reservoir. All drinking water sources are subject to the same stringent quality checks and requirements enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket Reservoir.</p> <p>Customer insight locally and nationally indicates broad support for water recycling. We do not expect customers to turn to bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and remains significantly more cost-effective.</p> <p>We appreciate your feedback and continued engagement in this discussion.</p>                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP57    | <p>Dear Sirs,</p> <p>I have only just become aware of the intention of Southern Water to discharge volumes of partially processed effluent into the new reservoir being developed at Havant Thicket.</p> <p>I must add my name to the list of people strongly opposed to this.</p> <p>Aside from the fact that water from the reservoir will be used for public consumption, from plans that have been circulated to local residents regarding additional uses of the reservoir site, it seems the site will also be available for public leisure - walking, and water activities. So if people will be able to use the water for certain leisure activities then surely it must not be allowed for any effluent of any concentration to be pumped into the reservoir, let alone for any of that partially treated product to be allowed to find its way into the supply that will be used by households.</p> <p>Please ensure my objection is registered, along with others that I am sure will lodge, and refuse to allow Southern Water to implement these proposals.</p> <p>Thanks and regards,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback. Your objection to the use of recycled water in Havant Thicket is noted.</p> <p>We understand concerns regarding the use of Havant Thicket reservoir for both public consumption and leisure activities. The Hampshire Water Transfer and Water Recycling Project (HWTWRP) adheres to global best practices with a multi-barrier approach and continuous monitoring to ensure exceptional water quality when transferred to the reservoir. The plant will rigorously monitor the quality of treated effluent from Portsmouth Harbour Water Treatment Works (WTW) and will automatically shut down if parameters move outside of treatable limits. No untreated wastewater will enter Havant Thicket reservoir. Furthermore, all drinking water sources are subject to stringent quality checks and requirements enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. These measures are in place to maintain the highest standards of water safety for both public consumption and recreational use.</p> <p>Regarding leisure activities at the reservoir, the water recycling proposals are not expected to impact planned public uses such as walking and water activities.</p> <p>Additionally, customer insight studies conducted locally and nationally indicate broad support for water recycling. We do not anticipate that the introduction of purified recycled water will result in customers choosing bottled water over tap water. Our treated water meets strict UK water standards and is significantly more cost-effective compared to bottled alternatives.</p> |

We appreciate the opportunity to address your concerns and provide further clarity on the measures in place to ensure water safety and quality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP58    | <p>Dear Sir/Madam</p> <p>I very strongly object to the Havant Thicket WT&amp;WR proposal. I have no problem with the existing Havant Thicket project, filling with natural spring water.</p> <p>I spent over 35 years in the water industry, developing technologies and practices for water system management and leakage control. This involved speaking at conferences around the world, giving me extension knowledge of water company operations in various countries.</p> <p>I have copied in my local MP because I view this issue as very important.</p> <ol style="list-style-type: none"> <li>1. Summary of Project Outcomes <ol style="list-style-type: none"> <li>a. It will mean even more sewage flowing into the sea. There is already a substantial local sewage outflow problem, correctly objected to by many residents. (See 3 below).</li> <li>b. It is carbon and energy hungry. (See 3 below).</li> <li>c. Enormous project cost plus ongoing operational costs. Ultimately customers will pay. (See 4 below).</li> <li>d. This project is a stop gap measure which suits the financial objectives of the water company's owners! It will ultimately mean very much higher expenditure in the long term as it is not addressing a core problem of mains replacements and leakage. (See 5 below).</li> <li>e. Multiple alternative solutions exist. These are much better for customers in terms of costs and water quality, will cause less disruption and be much better for the environment. (See 5 below).</li> </ol> </li> <li>1. Background <ol style="list-style-type: none"> <li>a. Currently about 50% of spring water from the South Downs naturally flows into the sea. This will supply water into the Havant Thicket Reservoir.</li> <li>b. The shortage of water is in the Southampton area with current over extraction from rivers Test and Itchen.</li> <li>c. Southern Water proposes to add recycled sewage into Havant Thicket Reservoir.</li> <li>d. Portsmouth Water customers have high-quality natural water. They are accustomed to drinking it and feel strongly that they do not have to accept Southern Water adding recycled sewage into their supply.</li> </ol> </li> <li>2. Environmental Impact <ol style="list-style-type: none"> <li>a. New treatment plant will be built on a landfill site at Havant. It will operate using reverse osmosis which is very energy intensive. Operating the plant will have huge environmental impact.</li> <li>b. New plant will pump rejected effluent into Langstone Harbour and The Solent, where there is already a major problem with sewage discharges via CSO's (Combined Sewage Overflows). This rejected effluent has much more concentrated contaminants than the sewage via CSO's. Thus the pollution will affect people and marine life.</li> </ol> </li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback. Your objection to the use of recycled water in Havant Thicket is noted.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought. Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities. The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulates the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           | <p>c. Three new pipelines to be built, including 45km pipeline to [REDACTED], hence disruption to wildlife and residents when installing pipelines.</p> <p>d. There will be 5 pumping stations with approx. 30 million litres of water pumped per day, for 365 days/year. Carbon pollution will be produced by the pumping operation.</p> <p>3. Financial</p> <p>a. Project completion cost is estimated at £1.2 billion and may overrun! The existing, first stage project, is a fraction of this at £340million.</p> <p>b. Large operational cost of new treatment works and 5 pumping stations (pumping 30 million litres/day).</p> <p>c. Macquarie Investment Funds have the majority shareholding in Southern Water. Portsmouth Water owned by Ancala LLP who are managed by a number of ex-Macquarie partners. It would seem they may be working together for optimal financial gain rather than the best long-term solutions both for the customers and the environment.</p> <p>4. Sustainable alternatives</p> <p>a. Let the reservoir fill naturally from the spring water - allow the time to do this.</p> <p>b. Overall water storage is the problem and only a tiny percentage of our rainwater gets used in the water supply. Storage options are as follows.</p> <p>i. Store water in aquifers. Aquifer storage successfully used elsewhere.</p> <p>ii. Build new reservoirs close to Southampton.</p> <p>c. Existing river extractions can be moved to the tidal limit thus protecting all the freshwater catchment.</p> <p>d. Southern Water loses approximately 100 million litres per day through leakage.</p> <p>i. Money should be spent reducing this problem. If leakage could be halved, then it would be a substantial amount of the water proposed to be supplied by the WT&amp;WR project.</p> <p>ii. Water mains renewal rate is around 0.5% per year, meaning that the old, cast-iron, pipes, which were designed to last 100 -120 years, are expected to last for about 1000 years! Invest money in mains replacement to substantially reduce leakage.</p> <p>iii. In the long-term money will have to be invested in solving the above issues, an expenditure which will be in addition to that proposed for the WT&amp;WR project! So, in the long run the total cost will be much higher. Much better to fix these core problems in the shorter term.</p> <p>e. Develop alternative solutions where 'drinking quality water' is not needed. Sometimes termed 'grey water,' this can be used by large water users such as golf courses, garden centres, agriculture, etc.</p> <p>This is not a viable project. It's bad for the environment, far too expensive, very unpopular and there are sustainable alternatives – so it's unnecessary.<br/>I very strongly object.</p> <p>Regards</p> | <p>intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensures compliance of all discharges.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. Reservoirs require a unique set of geological, geomorphological, and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>We consider that current water mains have an average asset life of approximately 100 years. If 0.5% of mains are renewed each year, this would mean that, on average, a main is expected to last for 200 years. There are different views in the water sector on the appropriate rate of mains renewal and the amount of investment needed on asset health overall. Our economic regulator Ofwat in its December 2024 final determinations published a roadmap for enhancing understanding of asset health in the sector. It is too early to say what the outcome of that work will be in relation to future rates of mains renewal.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WRMP59    | <p>A Sustainable Solution to England's Water Scarcity - Norwegian Glacial Water</p> <p>Dear Southern Water,</p> <p>I hope this email finds you well.</p> <p>My name is Inger Siri Helland CEO in Norwegian Premium Water AS . We have been following Southern Water's commitment to exploring alternative water sources to address the growing challenges of water scarcity in the UK, particularly in light of recent droughts and climate change.</p> <p>Norway is renowned for its pristine natural environment and abundant freshwater resources. Our glacial waters are among the purest in the world, untouched by human activity and pollution. Given the increasing demand for reliable and sustainable water supplies, we believe that Norwegian glacial water could offer a compelling solution for Southern Water.</p> <p>We propose a strategic partnership where we would supply Southern Water with bulk shipments of high-quality glacial water on a weekly basis. Our shipments would be transported in environmentally friendly vessels, ensuring a minimal carbon footprint.</p> <p>Key benefits of our proposal:</p> <p>Unmatched purity: Our glacial water is sourced from pristine, glacier-fed lakes, providing an exceptionally pure and refreshing product.</p> <p>Reliable supply: Norway's abundant water resources guarantee a stable and consistent supply throughout the year.</p> <p>Sustainability: Our operations prioritize environmental sustainability, from water sourcing to transportation.</p> <p>Economic benefits: By partnering with us, Southern Water can secure a reliable and long-term water supply, while contributing to the economic development of both nations. We would welcome the opportunity to discuss this proposal in more detail and explore how our Norwegian glacial water can address Southern Water's specific needs. Please feel free to contact me at your earliest convenience to arrange a meeting or call.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Thank you for proposing a partnership that relates to the use of Norwegian glacial water.</p> <p>After careful consideration and consultation we have decided to withdraw the option to import water from Norway via sea tankers from our WRMP24. This decision reflects our commitment to the communities we serve and the environment. During our consultation on rdWRMP24 significant concerns were raised by a number of respondents about this option, which included the potential impact of this initiative on the UK's fish farming industry, wild salmon populations and local marine life, due to the threat of <i>Gyrodactylus salaris</i>. <i>Gyrodactylus salaris</i> is classified as a Non-Native Invasive Species and its introduction could have potential devastating ecological consequences.</p> <p>Currently, there are no proven methodologies to guarantee that water imported from Norway via sea tankers would be free of <i>Gyrodactylus salaris</i>. Recognising the severity of this risk, we accept the possibility of introducing <i>Gyrodactylus salaris</i> poses an unacceptable risk. Furthermore, the logistical challenges associated with this proposal are significant. These include the procurement of services and obtaining planning permission for the pipeline construction through environmentally sensitive areas which could potentially lead to significant disruption. Given these challenges and the extended timelines required to address them, we believe it is prudent to consider more sustainable alternatives.</p> <p>However recognising the potential of bulk import of water via sea tankers as an emergency drought measure, we are committed to conducting further feasibility studies to mitigate risks associated with water transfer through sea tankers, including sourcing the water from within the UK. These studies will help to inform WRMP29.</p> <p>Further explanation is provided in Annex 20 and in the main fdWRMP24.</p> |

| WRMP61    | <p>Dear Sir or Madam</p> <p>I have reviewed the Southern Water revised draft Water Resources Management Plan.</p> <p>I have many concerns about what is being proposed.</p> <p>In my view the proposed Effluent Recycling plan and the associated works is</p> <ul style="list-style-type: none"> <li>· Expensive</li> <li>· Inefficient</li> <li>· Carbon Intensive</li> <li>· A risk to our environment</li> <li>· Does not serve the population</li> <li>· Has a high risk of failure</li> <li>· Not the best option available</li> <li>· and it creates a bad precedent that will support other bad schemes.</li> </ul> <p>I have attached my detailed review of the data made available to me - it does not look like a plan that is designed to serve the community in the short, medium, or long term.</p> <p>Please take my comments under review when you consider approving or rejecting the plan,</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> |
| WRMP62    | <p>I am very concerned at the use of untested effluent recycling proposed at Havant thicket reservoir. I am very happy with the idea of storing clean spring water to use in Portsmouth water system but not mixed water as proposed by Southern water.</p> <p>As I understand it planning has been agreed for the storage of spring water and not the pumping of effluent recycled water yet.</p> <p>Southern water is going ahead with this plan on the basis it will get permission because this is a national infrastructure project.</p> <p>I disagree with this stance.</p>                                                                                                                                                                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           | <p>It would be a national infrastructure project if it was for the storage of clean spring water as currently used in Portsmouth water pipes.</p> <p>What is being proposed is an experiment, one that uses the Portsmouth area residents as guinea pigs and cannot in any way be seen as maintaining the current levels of water quality.</p> <p>Adding effluent will be a massive down grade of current water quality and should not be allowed to go ahead.</p> <p>Having not gained support at planning for their scheme to go ahead, Southern water, should rethink and come up with a complete new plan that meets the agreement of the customers they and Portsmouth water serve.</p> <p>I fear this will not happen they will proceed with a slightly modified but essentially unchanged plan and get to a stage where they have done too much building of pipelines and such like that they are given permission because saying no will make the reservoir too expensive or unusable!</p> <p>I am asking for clean water not sewage!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website: <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| WRMP63    | <p>Hello,</p> <p>As a local resident I would like to register my objection to the proposal to recycle effluent in the new reservoir. It is an insane proposal that must be stopped at all costs. People ( and we know who you are)in decision making positions on this subject will be held to account for the rest of their professional lives if it is allowed to go ahead.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback. We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP64    | <p>I am Chair of WildFish and I appeared at the 2018 Inquiry. This is my personal response not that of WildFish.</p> <p>There is a fundamental underlying problem with Southern Water's Water Resources Management Plan (WRMP) and the consultation process. Far greater transparency is required. The WRMP is supposed to set out how Southern Water will meet their duty to match supply and demand in a way which is consistent with their environmental duties and objectives. The Plan is required to be regularly updated.</p> <p>A key environmental objective of the Plan is stated to be to reduce reliance on abstraction and the latest draft states that leaving more water in the environment is the Plan's largest driver. The history of the planning process is that proposals have turned out to have been either unrealistic from the start (e.g. the [REDACTED] Desalination proposal) or to have planned timescales which were unrealistic (e.g the Water Recycling proposal).</p> <p>Trust in water companies and the government and agencies supervision of them is at an all-time low. This is particularly so in relation to Southern Water's Plan. Following the 2018 Inquiry a s.20 agreement committed Southern Water to use "All Best Endeavours" to implement the Plan to provide the substantial additional supply necessary to reduce the reliance on abstraction from the chalk streams by 2027. This appears to have had no effect, and there does not appear to be any real incentive for Southern Water to keep to the timetables set out in the Plan.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.<br/><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> |

|           | <p>The WRMP process is currently incomprehensible to the public and ineffective. Effective public and stakeholder involvement in the Plan and its process is vital if this is to change. This cannot happen unless there is much greater transparency.</p> <p>The public and stakeholders need:</p> <p>To understand not just what is proposed, but why, and to be able to check and comment on the reasoning.</p> <p>To understand how implementation of the plan is progressing and to be able to check and comment on the implementation process.</p> <p>Currently it is not possible for the public and stakeholders to understand not just what is proposed, but why, and to be able to check and comment on the reasoning. The plan documents are extensive and complex and do not enable even those with experience of complex documents and the ability to devote significant time to understand key reasoning. For example: there is no clear explanation for how the supply proposals add up to equate to the anticipated demand, and there is no clear timeline, critical path, or range of outcomes information for the major infrastructure proposals. It is difficult to see how a fair and effective consultation can take place against this background.</p> <p>It is also not possible for the public and stakeholders to monitor the implementation of the plans proposals. There needs to be regularly published information about the progress of proposals, the reasons for any delay, and the action being taken as a result. How, for example, can the public and stakeholders judge whether “All Best Endeavours” are being used in the absence of such information?</p> <p>The urgent provision of extra water supply infrastructure for Southern Water’s area is of critical importance to the environment and customers. The planning for and implementation of the necessary infrastructure needs to be dramatically improved now. Without proper transparency that is unlikely to happen.</p> <p>Southern Water must be required to commit to producing and making public clear and realistic information about their proposals and their timing, and to update and publicise that information on a regular basis.</p> | <p>The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by Defra and our regulators. We will continue to do so. Our plan has been produced in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years. This process allows for changes to be made to the WRMP to account for new information and consultation feedback. In rare cases, for example, where there are unresolved issues and substantial public interest exists the Secretary of State may call an inquiry or hearing. With regard to delivery timescales, we aim to have the Hampshire Water Transfer and Water Recycling Project operational by 2034.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP65    | <p>The purchase of land and creation of soak aways to pipe excess water into would make much more sense as it’s replicating a natural environment.</p> <p>Southern Water’s proposal to use concrete to construct concrete cylinders that are nothing more than uncontrollable storm overflows, and blots on the landscape is utterly ridiculous and should not be allowed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Soakaways are generally used for small surface area domestic settings. At Southern Water we deal with massive flows, that would overwhelm and flood soakaways if sufficient impermeable area was connected. It could be effective to disconnect individual properties and drain their stormwater to a soakaway (subject to geology and ground conditions) but water companies have no statutory powers to alter, repair or improve private drainage systems.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP66    | <p>Please rethink your plans ,put in more reservoirs to catch our abundant rain fall,(1%)used at present, and clean up your act, allow my family and I to get back in the sea and continue our various activities with out the worries of what we are swimming in! No to effluent recycling!!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Thank you for reviewing our rdWRMP24 and providing feedback. We note your objection to effluent recycling.</p> <p>Regarding effects of recycled water on local habitat and ecology, purified recycled water is extremely clean. Water quality in Havant Thicket reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. All plans will be subject to the appropriate environmental due diligence as they evolve.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Regarding storage, we are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP67    | <p>I wish to OBJECT to Southern Water's revised draft water resources management plan which included [REDACTED] effluent recycling via Havant Thicket Reservoir.</p> <p>I am a 79 year old resident of Rowlands Castle and might not be around for the completion of this project, but nevertheless, looking to the future I ask myself this question, would I like to think that my grandchildren will have no choice but to drink effluent water that has been recycled, and the answer is an emphatic NO!</p> <p>In the recent past Southern Water's records on fixing leaks and allowing untreated overflows into the sea have been abysmal and I am not confident in them doing any better in the future. Surely the most cost effective and environmentally way forward would be to capture natural rainfall which we are told is only going to increase due to climate change.</p> <p>What happens if effluent being treated at [REDACTED] leaks into the pipework feeding the reservoir, no doubt Southern Water will say that will not be possible , I say anything is possible and this would put many, many peoples health at risk.</p> <p>There is talk of importing water by tankers from Norway, how can we be sure this has not been recycled effluent and whatever else might be in the water. the horrendous cost of this operation could be better spent fixing those leaks and replacing mains.</p> <p>Overall these latest proposals will use huge amounts of energy, carbon and chemicals, does this not go against government environment policies.</p> <p>I sincerely hope that you will rule against this proposal.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Regarding the safety of water brought in by tanker, this option is no longer included in our plan.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> |
| WRMP68    | <p>I am writing to register my objections to the new proposal at The Havant Thicket resevoir.</p> <p>I am against the proposals for a number of reasons:</p> <p>Re-cycled effluent water, the first such scheme in the UK, is unacceptable. It is not only untested but would also set a dangerous precedent for other water providers. Rainwater would provide a good quality raw water resource and I strongly urge Southern Water to stick to their initial plan for the Havant Thicket Reservoir, whereby the reservoir collects rainwater instead of channelling effluent water there to be treated.</p> <p>The proposal will result in an unacceptably high carbon impact and greenhouse gas emissions total. The spiralling costs, delays as well as the short lifespan of the project does not offer the best value for money to their customers. The carbon and energy cost estimated at £3 million pounds per year is not acceptable.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding the need for a new consultation, we consulted on our draft Water Resource Management Plan 2024 (dWRMP24) in 2022-2023 and, following changes, we consulted on our revised draft WRMP24 in 2024.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           | <p>A more sustainable alternative needs to be drawn up where instead of working against the predicted changes to our climate, they instead work with it.</p> <p>In order to address the issues of a growing population and more demand for water SW also needs to invest in repairing the leaks in a robust mains replacement programme. The current lose of around 19% of the water they take from the environment is also highly unacceptable.</p> <p>If winter rainwater was collected at the site, this would see the area through a dry summer and is, without doubt, the best option for the scheme. How can ferrying water from Norway in a drought (the proposed option) be a viable choice? It is both prohibitively expensive as well as working against environmentally friendly options.</p> <p>They need to listen to public objections as well as concerns expressed by the regulators. SW should engage with their paying customers to get their feedback on the changes. They should review all available options and a full public consultation should happen.</p> <p>I agree that urgent action needs to happen, however, sustainable solutions need to be drawn up that work with the environment instead of against it.</p> <p>How can SW customers (those who can afford it) buying bottled water, because they don't want to drink recycled effluent water, be a good option for the environment?</p>                                                                                                                                                                                                                 | <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>On leakages, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>On ferrying water from Norway, this option is no longer included in our plan.</p>                                                                                                           |
| WRMP69    | <p>I am emailing to object about Southern Water's Plans for Effluent Recycling and water management.</p> <p>Regarding recent consultations from Portsmouth Water and Southern Water, it appears as though a lot of the same proposals just keep getting recycled for comment again and again, with no account taken of the huge amount of previous feedback.</p> <p>In my view, the current plan is worse than previous ones. I am extremely concerned about the guaranteed pollution arising from this Plan.</p> <p>My main concerns are:</p> <ol style="list-style-type: none"> <li>1. The drought plan to tanker water from Norway. This seems ridiculous in many ways - very expensive, resource hungry in terms of fuel and time, doesn't do anything to address the drought problem, and quite unnecessary if Southern Water properly managed the water resources we have available to us.</li> <li>2. 19% of all water that Southern Water abstracts is lost through leaks. Their plan to repair leaks is slow and ineffective. Repairing leaks should be a much higher priority and given more urgency. This would go a long way to meeting water needs.</li> <li>3. The effluent recycling scheme is wrong on every count. If Southern Water more effectively managed and stored water resources, effluent recycling would not be needed. Effluent Recycling is an expensive option, not only financially, but also bad for the environment. The infrastructure required to manage this would be a huge undertaking, disruptive of the environment, polluting, and dangerous so close to the waters edge at BroadMarsh.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>On the scheme to tanker water from Norway, this option is no longer included in our plan.</p> <p>On leakages, the leakage reduction target set by the Government is 50% by 2050.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>4. Based on Southern Waters' record over the past 10-20 years, it is almost guaranteed that they will put contaminated water into the Reservoir. Once contaminated water is put into the Reservoir, it will not be flushed away by sea tides or a river flow, the water will remain in the Reservoir. I feel they cannot be trusted and should not be allowed to pollute our drinking water.</p> <p>5. Southern Water has already polluted Chichester Harbour and surrounding areas. This new Plan is likely to have a significant negative effect on the marine environment, as concentrated effluent will be regularly discharged into the Solent. In addition, recent studies show that the tides move this contaminated water back to the shoreline, making the sea potentially dangerous for those who use the sea for work or recreation.</p> <p>6. I have had to actively seek out this information. I believe that this public consultation is being kept very quiet, in an effort to avoid feedback from the public. The public are not engaged in this Consultation, and this is wrong, as it is such an important issue for anyone who drinks water from their taps, and cares about the environment, and how their money is spent.</p> <p>My preferred options are:</p> <ul style="list-style-type: none"> <li>i) move water abstractions from the upper catchment of rivers to the tidal limits</li> <li>ii) aquifer storage to store surplus water in the winter, so that this water is available to use in the summer (or when it is dry)</li> <li>iii) catch and store more rainfall. Keep this water out of the sewers, so that it does not just flush out to sea with the effluent.</li> <li>iv) no effluent recycling. Reduce the need for expensive and long pipes moving water around the countryside, by being more efficient and effective at abstracting and storing water.</li> </ul> <p>Continuous contamination of our seas, rivers and now potentially our drinking water has happened because of decades of lack of investment of public money, in order to line executive and shareholder pockets. This is morally appalling and a criminal offence - and should be treated as such.</p> <p>Please confirm that you have received this email, and advise me of the next steps.</p> | <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>2. A consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A. We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>On the relocation of abstraction points, we have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Further information on our options appraisal regarding MAR/ASR schemes, small storage reservoirs and moving abstractions downstream can be found in Annex 20 of our fdWRMP24.</p> |

| WRMP70    | <p>Dear Sir</p> <p>I write with concern for the proposal for Southern Water's plan to recycle sewage effluent into drinking water.</p> <p>I'm calling on DEFRA to stop this plan for the following reasons:-</p> <p>Huge environmental concerns for the proposed methods of delivering the sewage to a processing plant, the impact this will have with the work that it will take to proceed with this proposal.</p> <p>Deliberate suppression of cheaper, greener solutions for financial reasons.</p> <p>Complete breakdown of public trust in Southern Water, after the initial proposals for the New Reservoir at Havant have been completely changed. ie pleasure activities for the public sailing etc.</p> <p>The risk of contaminating even further what is a complicated process to supply potable water Portsmouth Water Customers.</p> <p>A complete turnaround from the initial proposals</p> <p>Yours faithfully</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. We look at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. It is not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> |
| WRMP71    | <p>I object strongly to Southern Waters proposals for using treated water to fill Havant Reservoir. The original proposal was to use rain and spring water.</p> <p>The forecast for more wet weather. Using rain water would be the ideal thing and no millions of pounds treating poo for us to drink YUCK!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Regarding capturing more rainfall, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| WRMP72    | I won't pay for sewage water !                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Thank you for reviewing our rdWRMP24 and providing feedback. We note the objection to the use of recycled water in Havant Thicket.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP73    | <p>Dear those concerned</p> <p>I would like to express my concerns re. The proposal, there are environmental, climate and sanitation concerns.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           | <p>This appears to put all eggs in one basket. More could be done to resolve leaks, houses could be designed to use bath/waste water for toilets rather than this option.</p> <p>I strongly object to the proposal.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward. We provide non-potable supplies to some large industrial users. However, it is not feasible for us to provide dual supplies, potable and non-potable, at the individual customer level. We are working with developers to recycle as much water as possible on new developments at the site level.</p> <p>We thank you for your engagement and feedback with our rdWRMP24 consultation. Your comment has been noted. Our website will contain the development of our WRMP24 and, going forward, our WRMP29.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| WRMP74    | <p>Good day,</p> <p>I am completely against your proposal as identified in <a href="https://havantmatters.org/water/wrmp2024/">https://havantmatters.org/water/wrmp2024/</a></p> <p>The arguments identified by another respondent totally encapsulate the sick and twisted mentality of S.W.</p> <p>Please challenge S.W. and make them rethink</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WRMP75    | <p>The purpose of this email is to object to Southern Water's plans for Effluent Recycling and water management.</p> <p>I would like to emphasise that I fully supported the planning application made by Portsmouth Water for a reservoir that would be filled with water sourced from local chalk fed freshwater springs. It would also have included water being taken across to [REDACTED] In making the application, Portsmouth Water were very open and conducted a very informative consultation. I attended one of the consultation presentations.</p> <p>By contrast, there seems to have been little publicity about this consultation. Parts of the documentation are not available for public viewing. There does not seem to be much transparency about the scheme, all alternatives considered or a justification for such a huge infrastructure heavy, energy intensive scheme with great potential for contamination and pollution incidents and finally, huge environmental impact during construction.</p> <p>1. Concerns about the proposals.<br/>1.1 Southern Water has only put forward the effluent recycling scheme in these proposals. Only one alternative to the scheme is referred to namely, bringing water in from Norway. This would be hugely expensive, a logistical nightmare bearing in mind the distance that the water would have to be shipped and a potential environmental disaster. The water would be totally different from that in this country and could contain contaminants and invasive species. It is suspect that</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>On the bringing water from Norway, this option is no longer included in our plan.</p> <p>On promoting water butts, our business customers are able to claim a free water butt from us as outlined here: <a href="https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/">https://www.southernwater.co.uk/save-a-little-water/saving-water-in-your-business/water-butts-scheme/</a>. Slow-drain water butts are also effective in reducing water run-off and decreasing the pressure on storm sewers, as our pilot scheme on the Isle of Wight has shown, and we have now installed over 4600 water butts: <a href="https://www.southernwater.co.uk/latest-news/free-water-butt-initiative-expands-to-gurnard-on-the-isle-of-wight/">https://www.southernwater.co.uk/latest-news/free-water-butt-initiative-expands-to-gurnard-on-the-isle-of-wight/</a>. These water butts have a drain installed halfway up, allowing the top half to slowly drain into the network over several hours. This way around 100 litres is left empty for the next time it rains. Following the success of the pilot scheme, this is now being replicated in Kent, where we are installing more than a thousand free water butts to help reduce storm overflows in Whitstable, Deal, Swalecliffe, Margate and in Fairlight, East Sussex.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           | <p>only one unworkable alternative to water delivery was presented. See below for other options. What else was considered and why has it been discounted?</p> <p>1.2. There is plenty of rain in the winter as there was last summer. The absence of a viable catchment scheme for the surplus water is a lost opportunity. Gardeners achieve this with the use of water butts. It is simply a difference in scale.</p> <p>1.3. The proposed siting of the recycling plant on an ex landfill site with known contaminants should be a major reason for rejecting the proposals. Tunnelling, piling and building in this area will inevitably result in the leaching of contaminants into the ground water and the harbour as the landfill site was not contained above or below the waste.</p> <p>1.4. The construction works conducted over several years would have a detrimental impact on the birds that use the harbour muds.</p> <p>1.5. The visibility impact of the plant buildings and tanks in this coastal area. Adequate screening would be debatable due to the known contaminants in the area that could kill any planting.</p> <p>1.6. I have grave concerns about the proposed discharge out to sea of the 'reject waste'. This waste will be of a higher concentration than at present. The existing discharges cause many problems for anyone using the coastal waters such as swimmers, rowers, paddle boarders etc who have to check apps for information as to the safety of the water. There is significant potential for environmental damage to the Solent and Langston Harbour areas including the Special Protection Area.</p> <p>1.7. The treatment and energy costs of operating the plant throughout the year will be huge not least because of the distances and terrain over/ through which the water would need to be piped. It would be much better to build water solutions close to the consumption area. Net Zero Carbon ambitions do not appear to have been considered at all.</p> <p>1.8. Personally, I want to continue receiving water from Portsmouth Water and I do not want to routinely receive recycled water particularly where there is no need for it.</p> <p>2. Concerns about Southern Water's involvement in the Havant Thicket Reservoir.</p> <p>2.1. A major concern is the involvement of Southern Water in this project at all. It has a very poor track record on sewage discharges and leaking pipework and sewers. For example, in 2021, it was fined a record £90 million for dumping sewage in the sea between 2010 and 2015.</p> <p>2.2. I am very concerned that Southern Water will be in control of the recycling plant. Portsmouth Water state that they are confident that they will be able to control what is pumped into the reservoir with a back up of shutting down the pipeline. This cannot be so as they will have to rely on data provided by Southern Water which could only be provided after any pollution incident. If there is an incident, then its effects are permanent as the reservoir is contained and is neither tidal nor has a river flow to mitigate the situation.</p> <p>2.3. There is to be no independent monitoring of discharges into the reservoir.</p> <p>2.4.1. I think that Southern Water's precarious financial position should also be considered. They do not maintain or improve the existing infrastructure and pipework. This results in some serious problems such as the recent series of leaks from the pipework under the Eastern Rd in Portsmouth resulting in the road having to be closed for urgent repairs on a number of occasions. This is one of three arterial routes into the city. It caused huge disruption on each occasion.</p> | <p>On the site of the recycling plant, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations. Regarding impacts on wading birds, all plans will be subject to the appropriate environmental due diligence as they evolve.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW. The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>On the relocation of abstraction sites, we have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>One of the complications with moving abstractions close to sea is the impact of tides on the duration of abstraction and water quality. We will be exploring them further for our next plan.</p> <p>On constructing new reservoirs, we are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Furthermore, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have</p> |

|           | <p>2.4.2. If existing infrastructure is not maintained, how will they ensure that the complex machinery at the proposed plant is meticulously maintained and repaired as well as the proposed miles of pipework that in many places will be in difficult terrain. If the money to do so is not there, then who bears the cost and carries out the necessary work?</p> <p>3. Options that should be considered.</p> <p>3.1. The protection of rivers should be a priority. This can be achieved by moving abstractions from the upper catchment of rivers to the tidal limit. This would enable large quantities of river water to be captured before it flows out to sea and is wasted. Abstraction higher up the rivers could be totally or substantially reduced.</p> <p>3.2. Prioritise the investigation and delivery of new reservoir schemes and aquifer storage solutions. There is no shortage of water in this area. It is currently not captured for use when required at a later date.</p> <p>3.3. Regular monitoring and amendment of abstraction licences based on evidence of harm including revocation of the licence where there are continual breaches of its terms.</p> <p>3.4. The implementation of a robust improvement, replacement and maintenance program of the distribution system to bring the existing leakage under control.</p> <p>I think that the reservoir should be solely fed by the local chalk streams. No treated water should ever be discharged into it. We have a unique opportunity in having a reservoir as per the original planning permission.</p> <p>Kindly acknowledge receipt of this email. Please also advise me as to what will be happening next.</p> | <p>considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding leakages, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply. Portsmouth Harbour WTW is already in existence. The water recycling plant will be sympathetic to Broadmarsh Coastal Park and views from Langstone Harbour without compromising functional or safety requirements.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below:<br/><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>We are financially resilient and maintain a strong liquidity position, with the strong backing of our shareholders. They have injected more than £1.6 billion of fresh equity into the Southern</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Water group since they joined in 2021, and this financing has allowed us to spend £3bn during 2020-25 (or £1,500 per household) and implement our Turnaround Plan, to deliver for our communities and the environment.</p> <p>We acknowledge the ongoing challenges and uncertainty faced by all companies operating in the UK water and wastewater sector, but we are confident in our ability to deliver what we have set out in our future investment plans and that when the Competition and Markets Authority (CMA) makes its PR24 determination it will provide sufficient funding for the investment in the 2025-2030 period.</p> <p>Regarding point 3.3, all abstraction licences are issued by the Environment Agency (EA) and our regulators monitor licence compliance and environmental impacts closely. Where there are thought to be risks to the environment from an abstraction the Water Industry National Environment Programme (WINEP) requires that water companies investigate and, if necessary, alter their abstraction licences to ensure abstractions are sustainable. In addition, a permit is required from the EA for the release of purified recycled water into Havant Thicket Reservoir and of reject water from the proposed Water Recycling Plant to the Solent. We will apply for this permit alongside our Development Consent Order application.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WRMP303   | <p>I refer to the above Management Plan with respect to a serious risk to human health resulting from the recycling of effluent from a local sewage treatment works into the proposed Havant Thicket Reservoir</p> <p>It is understood that Southern Water proposes to pump sewage effluent into the new reservoir at Havant Thicket, which was originally approved by Havant District Council to store pure spring water for distribution to the residents living in the Portsmouth area served by the Portsmouth Water Company.</p> <p>It is now proposed to pump sewage effluent to mix with the pure spring water.</p> <p>It is proposed to filter the water using a reverse osmosis process.</p> <p>Sewage effluent contains viruses and bacteria which are harmful to human health</p> <p>The scheme places total reliance on reverse osmosis to render the water free of all infectious material.</p> <p>This poses a massive risk to human health as reverse osmosis is not a guaranteed process able to remove every virus and bacteria.</p> <p>It relies on full proof maintenance procedures being adopted 24 hrs every day for ever.</p> <p>The quality of control used by Southern Water and the almost total lack of supervision by the Environment Agency which has allowed the sea and UK rivers to be polluted with sewage, guarantees that the sewage effluent to be pumped into the Havant Thicket Reservoir will not be properly and safely treated.</p> <p>Placing the health of the residents at risk around the Portsmouth area is a criminal offence and must not be allowed to happen.</p> <p>Sewage effluent cannot be made 100% pure for drinking by Portsmouth Water customers who have no alternative source of water supply.</p> <p>Defra and the Environment Agency have a Statutory Duty to protect the UK residents from pollution particularly with respect to drinking water supplies.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire, due to the abstraction reductions that are necessary to protect the rivers Test and Itchen.</p> <p>Water recycling technology is tried-and-tested in other parts of the world, including in Australia, Singapore and the USA, where companies have been recycling wastewater to create a drinking water source for more than 40 years. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by the Hampshire Water Transfer and Water Recycling Project (HWTWRP). We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>The reverse osmosis process uses membranes with perforations more than 50,000 times smaller than the width of a human hair. It is followed by a process called advanced oxidation, which uses ultraviolet light and hydrogen peroxide to further purify the water. These processes remove the vast majority of impurities in the water including pharmaceuticals, bacteria and viruses to produce purified recycled water. The purified recycled water pumped into Havant Thicket Reservoir will have already been through two treatment processes; once at Portsmouth Harbour Wastewater Treatment Works, then a second time through the recycling plant. Water abstracted from the reservoir would be then be treated again to strict</p> |

This includes water entering the Havant Thicket Reservoir. We are one of a number of UK water companies developing water recycling plants. We therefore want to play our part in building confidence in the water recycling process and providing assurance that safeguards will be put in place to ensure regulatory and environmental requirements will be met and stringent water quality standards maintained. Further information can be found at <a href="https://www.southernwater.co.uk/about-us/our-plans/water-recycling/hampshire-water-transfer-and-water-recycling-project/">https://www.southernwater.co.uk/about-us/our-plans/water-recycling/hampshire-water-transfer-and-water-recycling-project/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| WRMP354   | <p>I have spent some time reading Southern Water's latest Draft Waters Management Plan and the Havant Matters Water Matters overview and 40 key concerns. We moved to Rowlands Castle in December 2020 and live at the top of Redhill Road very close to where the reservoir is already under construction. We walk in and around Havant Thicket and the Staunton Estate regularly, almost daily and have been interested in the progress being made and in particular the overall aesthetic of the project compared to the initial artists impressions. The idea of having a large area of clean water, a new reservoir used to collect and store raw water from the chalk streams, fantastic! Far better than another large housing estate. A large area of fresh, clean water supporting and providing clean air for the environment, wonderful!</p> <p>I was initially concerned when plans were changed not to remove the soil and groundworks necessary to create the various levels required but to understand the plan had been "developed" to simply relocate all the groundworks on site. A classic case of agreeing one thing with planners and then applying to change the initial plan with little or no consultation, no doubt to massively reduce construction costs. The idea of ending up with something like the reservoirs created in the south West of London with huge embankments was not what was envisaged or agreed to at all.</p> <p>We now discover Southern Waters proposals to hijack the complete purpose of the agreed project and use the reservoir once completed for a completely different purpose to what was agreed. Now proposing to back pump and store "treated and recycled" water from their effluent / sewage plants. This is a very different proposal to what has been granted permission, the storage of raw naturally occurring fresh water otherwise lost, pumped from clean chalk streams. DEFRA appear to be doing a good job in contesting the proposal and I fully support their work. The level of trust enjoyed by Southern Water must be pretty close to zero and they are not to be trusted. They are looking for a cheap on their doorstep solution to problems they have had many years to avoid. They have no real interest in the environment and this is clearly demonstrated by there repeated proposal to transport water from Scandinavia in times of drought. How in any ones mind could that be considered a sensible environmentally acceptable solution?</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire, due to the abstraction reductions that are necessary to protect the chalk stream habitats and ecology of the rivers Test and Itchen, particularly during a drought.</p> <p>The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir, and regarding changes to proposals for the reservoir itself, such as the inclusion of embankments, this is a question for Portsmouth Water, which is developing the reservoir.</p> <p>Our proposals, involving the construction of a water recycling plant near Portsmouth Harbour, Havant and pipelines necessary to transport treated water, are covered by the Hampshire Water Transfer and Water Recycling Project (HWTWRP) and details for this project are available on our dedicated website <a href="https://www.hampshirewtrwp.co.uk/">https://www.hampshirewtrwp.co.uk/</a>. On this page you'll find details of a further consultation on water quality, held in March 2025.</p> <p>Southern Water and Portsmouth Water are working together to investigate the possible effects on water quality within Havant Thicket Reservoir based on various operational scenarios. This analysis is ongoing with further engagement on the results to come later. Our assessments will also be fully reported on in our Environmental Statement, which will be submitted as part of our application for development consent. Water quality will be continuously monitored throughout the water recycling plant to ensure it only passes forward to the next stage of the process if it meets defined standards. This includes water entering the Havant Thicket Reservoir.</p> <p>We are one of a number of UK water companies developing water recycling plants. We therefore want to play our part in building confidence in the water recycling process and providing assurance that safeguards will be put in place to ensure regulatory and environmental requirements will be met and stringent water quality standards maintained.</p> |

|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>I am fully supportive of the initial plan but completely horrified and untrusting of what is now being proposed by Southern Water. It will be a disastrous outcome to a what was a sensible project to collect, back pump and retain the fresh chalk stream waters we have flowing naturally through our countryside. The initial plan for the reservoir agreed and positioned at a relatively high altitude will not be greatly contaminated by agricultural activity and provides an excellent and I would suggest fairly unique opportunity, to achieve something really purposeful and environmentally positive right on the edge of the South Downs.</p> <p>Southern water are busy pumping huge volumes of untreated sewage into Chichester, Langstone and Portsmouth Harbours. Far more than in the past and its got nothing to do with overflowing storm drains or high levels of rainfall. I have sailed on the south coast for the past 35 years. I have never experienced or seen raw sewage in the water and marinas like I did last summer. Even during the driest periods Please do all that you can to resist Southern water's recycling proposals.</p> | <p>All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by the HWTWRP. We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>Regarding sea tankering from Norway, this option is no longer included in our plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP372   | <p>Dear Sir/Madam,</p> <p>I believe that the revised Water Resources Management Plan has not been thought through properly.<br/>It would make much more sense to collect Winter rainfall nearer to where it will be supplied and to store it for use in the Summer.<br/>Water could also be abstracted from the Rivers after heavy rain, to help prevent flooding.</p> <p>It would avoid the necessity of the construction of 26 miles of pipeline and all the associated disruption and costs,<br/>Including the future running costs of pumping water long distances.</p> <p>I also think that there is (rightly) a general lack of confidence that the proposed plan to treat Water from the toilet into drinking water is healthy and without danger of serious problems occurring.<br/>I am sure that many more people would be wanting to buy bottled water, leading to excessive plastic waste.</p> <p>Definitely serious measures need to be taken to avoid the excessive discharge of sewage into Langstone and Chichester Harbours and the Solent. (Also many other places in the country.)<br/>That is a massive ongoing issue.</p>                            | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We acknowledge concerns raised about the need for our Hampshire Water Transfer and Water Recycling Project (HWTWRP) and whether it's the right solution. Water scarcity is a very real issue in the South East of England, which needs to find more than 2,500 million extra litres of water a day by 2050 to maintain public supplies. Having a resilient water supply, especially in times of drought, is something that we must plan for. In Hampshire, the challenge is especially acute due to the need to reduce abstractions from the county's chalk streams and aquifers and is compounded by climate change and a growing population. Relying on winter rainfall to fill a reservoir is not an option when consecutive dry winters mean river abstractions to fill them are not available. Reservoirs are a crucial part of a resilient water supply network but are not enough to meet the planned deficit during drought conditions and further new drought resilient solutions are required. A truly drought-resilient approach is to use water recycling to supplement the reservoirs and ensure a ready supply of water that does not need to be taken from the environment we are trying to protect.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us, as outlined above. In addition, the length of pipeline is necessary to convey the treated water to and from existing infrastructure, such as the reservoir and water supply works.</p> <p>Water recycling technology is tried-and-tested in other parts of the world, including in Australia, Singapore and the USA, where companies have been recycling wastewater to create a drinking water source for more than 40 years. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by HWTWRP. We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from</p> |

For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a> We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/">https://www.southernwater.co.uk/about-us/our-plans/drainage-and-wastewater-management-plans/</a> In addition, further information regarding work the relevant Southern Water teams are undertaking to reduce storm overflows to the harbours, as well as to rivers and seas across our region, can be found here; <a href="https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/">https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/</a></p> |
| WRMP384   | <p>Dear sir/madam</p> <p>It concerns me that the new reservoir being built in Havant is not going to be used as original intended. My understanding is that planning was granted on it storing spring water. Now I hear that southern water want to use it to use reclaimed water from their foul water collection network.</p> <p>I for one object to southern waters plan for it to be also used for the storing of reclaimed water.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling technology is tried-and-tested in other parts of the world, including in Australia, Singapore and the USA, where companies have been recycling wastewater to create a drinking water source for more than 40 years. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by the Hampshire Water Transfer and Water Recycling Project (HWTWRP). We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long term. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a> Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. We note the objection to the use of recycled water in Havant Thicket.</p>                                                                                                                                                                            |
| WRMP412   | <p>Sirs, apart from the environmental impact of recycling sewage , i and my family do not relish the thought of drinking water like this that has had chemicals and such added to it. Please, please find another way of making our water safe to drink</p>                                                                                                                                                                                | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Water recycling technology is tried-and-tested in other parts of the world, including in Australia, Singapore and the USA, where companies have been recycling wastewater to create a drinking water source for more than 40 years. All water we supply to customers must meet strict UK drinking water standards, as enforced by the Drinking Water Inspectorate, and this will also be the case for water supplied by the Hampshire Water Transfer and Water Recycling Project (HWTWRP). We are working closely with international experts, regulators and environmental organisations to develop the plans to ensure that there will be no negative impact on the environment or human health from recycled water either in the short or long</p>                                                                                                                                                                                                                                                                                                                                  |

For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP417   | <p>I am extremely concerned about the revised Southern Water plans for effluent recycling at Broad marsh and Havant Thicket. As a local resident and firm sustainability advocate I am very worried about how this project will affect the environment, while also not being good value for Southern Water customers.</p> <p>The discharge of this sewage into the new reservoir and into our rivers and harbours, not to mention the huge carbon impact from construction and operation cannot come at a worse time for the planet, when we should all be working towards projects that help the environment and reverse climate change instead of making it worse for everyone.</p> <p>Please please find more environmentally friendly solutions to this project, the planet depends on it.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We note the objection to the use of recycled water in Havant Thicket. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>All water companies in England work with regulators to carry out investigations through the Water Industry National Environment Programme (WINEP). One of the many objectives of the programme is to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes such as water recycling which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling or desalination plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050. The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Regarding concerns that water recycling will involve the discharge of sewage into the new reservoir, this will not happen as the water recycling proposals are fundamentally different, and separate, to the network of storm overflows. Storm overflows are a feature of the combined sewer network, built into the system to allow the release of excess flows from sewers into rivers or sea when there is an overload in the network, usually caused by heavy rainfall but sometimes by excessive groundwater infiltration. We know that our continued reliance on these legacy features of the sewer network is no longer acceptable and we are working to reduce their use through our Clean Rivers and Seas Plan (<a href="https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/">https://www.southernwater.co.uk/about-us/our-plans/clean-rivers-and-seas-plan/</a>). So whilst storm overflows, rather like the overflow on a bath or sink, are built into the sewer network to release excess flow to prevent flooding, these features are entirely separate to the recycling plant and will not be connected to it. More information on how storm overflows operate is</p> |

| WRMP457   | <p>I am writing to strongly object to the Southern Water (SW) Draft Water Resources Management Plan. I urge you to reject it in favour of them having to explore and implement options that work with climate change mitigation and adaptation, don't pollute and give better value for money before they resort to effluent recycling.</p> <p>My reasons for objecting include:</p> <ol style="list-style-type: none"> <li>1. Huge new infrastructure building of the plant, pumping stations and kilometres of pipelines needed for effluent recycling creates an unacceptably high embedded carbon impact, especially as we are in a climate emergency. I strongly believe that because SW can make huge profits from such building and can't make profits from fixing leaks and repairing water mains skews the options they are willing to consider.</li> <li>2. The process of reverse osmosis under high pressure requires huge amounts of energy. SW are proposing to address intermittent summer drought with effluent recycling which has to operate 365 days a year. The daily operating energy demand of this is incompatible with trying to improve national energy security and reduce energy demand. The huge carbon impact will last for the 60 year life of the plant way beyond SW's own 2030 target for net zero.</li> <li>3. The recycling process results in reject water release into the sea or other water bodies and this release is 4 x more concentrated than it was at the start. All schemes require release to an environmental 'buffer'. This will cause changes in water composition (salinity, temperature etc), pollution risk, the effect on the ecology is uncertain, there is bio-accumulation risk and possible</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback. Please find below our response to your comments.</p> <ol style="list-style-type: none"> <li>1. Our capital programmes are delivered in line with our regulatory commitments and operational needs.</li> <li>1. &amp; 2. Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</li> </ol> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Climate change is pivotal to much of the work we are doing. As stated in the Government's policy paper Water abstraction plan: Environment - GOV.UK "A changing climate is likely to bring greater variability in rainfall and higher temperatures. We expect less groundwater recharge and larger seasonal variations in river flow as well as changes to when and how extended dry periods occur."</p> <ol style="list-style-type: none"> <li>3. We are not planning to discharge any reject water from Littlehampton into the sea.</li> </ol> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           | <p>sediment build up. Given that there will be no independent monitoring and SW does not have a good track record on its willingness to avoid polluting there can be no public confidence in this scheme. SW Preliminary Environmental Information Report (2024) confirmed a likely significant effect on the marine environment from the Hampshire effluent recycling scheme (eg warm brine and chemicals the effect of which is more pronounced during drought). Modelling for water quality impacts on Thicket Reservoir is still not available. The scheme should definitely not move forward until the environmental risks/impacts are known.</p> <p>4. The SW plans include building on former landfill sites. Hundreds of piles will be driven in with serious risk of leachate from the landfill sites entering Langstone Harbour, and the sea at the Isle of Wight site. These sites should definitely be rejected.</p> | <p>The Environment Agency will determine the permits for the release of purified recycled water into Havant Thicket reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <p>As the environmental regulators of the water industry, the Environment Agency and Natural England have provided detailed comments regarding the Environmental Assessments for the WRMP. Work is being undertaken by our consultants WSP to address these comments and make any necessary changes to ensure that the assessments align with regulatory requirements.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/> <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>4. Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> <p>5. We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option. It is our desire to 'avoid' use of drought options and become more drought resilient. We are working on this and we are making huge investments to reduce our need for the Candover/ Test/ Itchen drought permits and orders. However, at the moment, as we wait for the new</p> |

|           | 5. The UK currently captures only 1% of rainwater and with increased rainfall predicted due to climate change we should capture more winter rain to use in dry summers before we rush to effluent recycling. Rainwater is good quality and capturing it helps to reduce flood risk. SW say they have 'parked' more sustainable options that work with predicted climate changes. Why? | <p>schemes, the reliance on some drought options (e.g. the River Test Drought Permit) is essential because, without it, there would be insufficient supply to meet the demands of thousands of our customers in Hampshire. We discuss the changed delivery dates in Section 6.3.4 of our rdWRMP24 Technical Report.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Our audits generally include fixing leaky loos, taps, showers etc. and/or fitting water-efficient devices as well as recommending other water efficiency improvements your business can make such as rainwater harvesting.</p> <p>The audit (and the fixes) are free and we've partnered with the charity Groundwork to deliver this initiative. More information here:<br/> <a href="https://www.southernwater.co.uk/save-a-little-water/water-saving-audits/">https://www.southernwater.co.uk/save-a-little-water/water-saving-audits/</a></p> <p>We aim to replace all our existing household and non-household (industry) water meters with smart meters during AMP8 (2025-2030). Given the challenges we face in the Central area, we have prioritised Sussex North WRZ and Sussex Brighton WRZ for roll-out of the smart metering programme for household customers.</p> <p>We are also reviewing an accelerated programme of non-household demand management in Sussex North WRZ to reduce industry and agriculture water consumption.</p> <p>Our home visits programme and schools programme are specifically targeted at raising awareness about water use and providing helpful tips on reducing water consumption in homes. In AMP8 we will be building a Water Calculator to help educate customers on their own water use and provide useful practical advice on how to save water.</p> <p>We have provisionally included a high number of home visits in our plan. However, our on-going activities and interactions with customers suggest that there are alternative ways of achieving demand reductions in a more effective manner. We will be exploring these in further detail over AMP8 and adjust the number of planned home visits and non-household water audits accordingly.</p> |

|-----------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>6. On leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>7. Regarding the viability of sea tankering, this option is no longer included in our plan.</p> <p>8. On population growth forecasts, for dWRMP24 we, together with the other WRSE companies, commissioned Edge Analytics to provide growth forecasts for all companies, in line with government guidelines. Edge Analytics used the latest available local plan data, as well as data from the Office for National Statistics (ONS) and the Greater London Authority (GLA), to produce projections at a WRZ level. Separate forecasts were developed for total population, household population, non-household population, dwellings, dwellings occupancy, population in commercial properties and business counts. Following the publication of latest WRPG in March 2023, we commissioned an update to that forecast (along with other WRSE companies), which enabled us to consider growth under five different projections based on data from Local Authorities, ONS and OxCam.</p> <p>We have not based our plan on a single population forecast but have used a range of population forecasts to determine the nine future supply-demand balance scenarios that we have planned for (see Section 5.5.3 of the rdWRMP24 Technical Report). The estimates of future population growth range is from 7% to 34% growth at the company level between 2025 and 2075. The range of growth forecasts considered each of our WRZs is shown in Section 2 of Annex 7 that accompanied rdWRMP24 Technical Report. As part of our adaptive planning approach, we will track population growth and switch to the most appropriate supply-demand balance situation.</p> <p>Regarding your summary, our comments are as follows:</p> <ul style="list-style-type: none"> <li>• Please see point 5.</li> <li>• Please see point 6.</li> <li>• We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</li> </ul> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>6. SW lose 19% of all the water they abstract, ie 100million litres per day (which customers pay to treat) through leakage and they will lose some of the hugely expensive recycled water too. Their plan to reduce leakage by 53% by 2050 is under ambitious and industry experts say they could aim for 50% by 2040 and 70% by 2050 which would help to make recycling a last resort option.</p> <p>7. Tankering water from Norway in a drought is obviously not a credible drought plan and should be rejected!</p> <p>8. SW are hyping population growth forecasts (23% as compared with Ofwat's estimate of 17%), exaggerating likely levels of abstraction reform and assuming no winter abstraction from rivers Itchen and Rother and thereby inflating their demand forecasts in order to justify their reckless plans.</p> <p>There are better alternatives SW could pursue:</p> <ul style="list-style-type: none"> <li>• Capture more rainfall</li> <li>• Reduce leakage and increase the rate of mains replacement - SW are currently only aiming to replace 1 in 1000 years and yet mains only last 120 years.</li> <li>• Move abstraction downstream to the tidal limit so that watercourses rejuvenate</li> <li>• Use contained aquifers to store rainfall (Managed Aquifer Recharge Schemes). This requires much less infrastructure and so has less profit potential. SW knows of possible sites but has parked these til 2029, is this why?</li> <li>• Create new winter storage reservoirs - The cost of the Hampshire effluent recycling plant is currently estimated as £1.2b and spiralling upwards (and with only 60 years longevity), whereas 3 winter storage reservoirs could be built for the same money and eventually have a legacy benefit often becoming wildlife or recreational sites.</li> <li>• Much more effort needs to be put into working with industry, agriculture, golf courses and community buildings (schools, social clubs and so on) to reduce their use of drinking water for non-potable uses. This can be achieved with free surveys and provision of grants to encourage the adoption of more sustainable solutions.</li> </ul> | <ul style="list-style-type: none"> <li>• A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</li> <li>• On building more reservoirs, we are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water, with the possibility of building a third (River Adur Offline Storage). Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</li> </ul> <p>However, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>Regarding the HWTWRP, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately</p> |

|           | <p>Given spiralling costs, programme delays, significant environmental effects, the need to operate 365 days a year with huge carbon impact, lack of legacy and short life-span, the Hampshire effluent recycling scheme cannot represent best value for customers and the same applies to the other ones under consideration.</p> <p>I believe the Government should take water back into public ownership, but they certainly could do more and challenge the leakage targets to insist they are more ambitious, and also change funding mechanisms to favour maintenance and renewal work instead of new infrastructure projects.</p> <p>SW is taking us in the wrong direction and wasting the opportunity to make sure water resources are planned in a more sustainable way.</p> | <p>£8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>A key benefit of Havant Thicket reservoir is the ability to store recycled water ahead of and during a drought.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> <p>Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>Regarding our function as a business, as a major abstractor of water in the South East for public supply, and with responsibility for the conveyance of wastewater from homes and businesses for treatment before it is returned to rivers or sea, Southern Water plays a critical role in carrying out these duties whilst protecting and enhancing the environment. Further information and reports on how we achieve this can be found on our website <a href="https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/">https://www.southernwater.co.uk/about-us/environmental-performance/protecting-and-improving-our-environment/</a></p> |
| WRMP462   | <p>I am writing to express my strong objection and serious deep concern about the plans of Southern Water and Portsmouth Water to use the new Havant Thicket Reservoir to supply local residents with drinking water from treated effluent via the process of reverse osmosis.</p> <p>I would be really grateful if you could take the time to read my full submission and fully consider the points made. Thank you.</p> <p>Other solutions that would be cheaper and more sustainable have not been properly researched. These include reducing water leakage which is currently estimated at 108.5 litres a day and improved rainfall collection, currently estimated at 1% in the UK.</p>                                                                                          | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>On leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>There are several reasons for my concerns, ie<br/> The proposed solution is hungry on energy, carbon and overall financial cost.<br/> The construction of pipes and tunnelling risks polluting our local harbour (Langstone Harbour) with leachates.<br/> Pharmaceutical pollution – sewage is not tested for this and only organic waste is removed on treatment.<br/> The inevitable increase in bottled water usage amongst the population and its environmental impact.<br/> The new effluent recycling plant at Havant, near the current treatment works at Portsmouth Harbour WTW, is planned to be built on a former landfill site, giving rise to environmental concerns.</p> <p>I have concerns around the transparency of the water companies in fielding this proposal. There are already trust issues around these water companies, they have repeatedly been fined for breaches of the law regarding sewage dumping in rivers and seas.<br/> The original local authority planning consent for the build of the reservoir in Havant Thicket was for raw water and it seems the majority of local residents still anticipate this to be the case. However Southern Water are having this project designated as a 'nationally significant infrastructure project', therefore bypassing local planning authority and straight to yourselves.</p> <p>There is very little precedent worldwide for the use of reverse osmosis for long term drinking water. In Singapore, due to a natural shortage of water, it is used to supply 40% of the country's water needs, but for industrial/brown water, not tap water. However, in Singapore, Reverse osmosis is being used for desalination, not sewage treatment.</p> <p>The website ntu.edu.sg, gives the following reasons for RO not being used for drinking water supply.<br/> <a href="https://blogs.ntu.edu.sg/hp3203-1718-s2-12/our-water-supply/">https://blogs.ntu.edu.sg/hp3203-1718-s2-12/our-water-supply/</a></p> <p>"Why can't you drink reverse osmosis water?<br/> Contaminants not removed from water by RO filters include dissolved gases such as hydrogen sulfide, a common nuisance contaminant with characteristic rotten egg odor, which passes through the RO membrane. Some pesticides, solvents and volatile organic chemicals (VOCs) are not removed by RO".</p> <p>The plans to supply household water from effluent recycling have been mooted for use as a drought resource only, however once in place, the plants will have to operate all year round, whether drought conditions or not.</p> <p>I live in Havant, Hampshire. This is on the edge of the south downs, an area rich in pure, natural springs. We are always one of the last (if not the actual last) areas to experience drought conditions. If water is short here, then surely the water leakage needs to be addressed first,</p> | <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>Regarding energy, carbon and finance, water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>Regarding construction a further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations</p> <p>On pollution and reverse osmosis, no untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. No one piece of treatment equipment manages all contaminants. All treatment methods have limitations and often situations require a combination of treatment processes to effectively treat the water. Activated Carbon (AC) filtration and/or sediment filtration is commonly used in conjunction with RO filters.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p> |

|           | <p>alongside the capture of the bountiful rainfall that we have in this country. Especially as the latter appears to be increasing in recent times.</p> <p>I am really concerned about the long term health benefits of the drinking RO treated effluent both on the environment and on human beings. I am one of many people who suffer from long term digestive conditions and I cannot believe that this would be improved by this water. I do not believe that anybody really knows what the harm is likely to be, as there is a lack of research and worldwide precedent. Please do not allow the phrase 'there is no evidence of any harmful effects' be used to mitigate the fact that there is no evidence that it is safe either.</p> <p>I would also find it difficult to believe that if this RO process was put into place, that it could ever be reversible.</p> <p>I just do not understand why any human beings can look at this process and believe that the best way forward would be to impose RO treated drinking water on a local population. Especially given the possibility of alternatives that would be more cost effective and environmentally sustainable.</p> <p>The water companies have managed to bypass local planning controls and DEFRA is now the only hope to avoid this happening. Please take into account the points are being made by myself and other individuals. It is possible that there may not be too many objections, but please consider the viability of the points being made over and above the quantity of responses.</p> <p>Thank you for taking the time to read and consider my submission.</p> | <p>Specifically with regard to hydrogen sulphide, the concentrations of sulphide observed in the treated effluent (2.4 micrograms per litre) from the pilot tests are very low, to the extent that normal activity of naturally occurring bacteria in the lake would be more likely to affect sulphide concentrations than the treated water from the plant.</p> <p>Regarding the quality of recycled water, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a> This means that there is no negative impact of recycled water either short term or long term.</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper</p> <p>Building on former landfill sites is not unusual. When done with proper management and compliance with regulations and ensuring environmental safeguards are in place building on former landfill sites is both feasible and safe and is increasingly an important tool in sustainable development,</p> <p>Southern Water has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill, including in respect of piling down to chalk. Works interacting with the landfill are expected to require an environmental permit, which provides an additional layer of protection and control in relation to those works.</p> <p>We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main report to the statement of response.</p> <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.</p> <p><a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>303Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">customers: https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> |
| WRMP463   | <p>I am writing to express my strong OPPOSITION to Southern Water's effluent recycling schemes. I wish for DEFRA to reject the plan and insist that Southern Water develops a more sustainable plan that puts local people and the environment before profit. Please don't let this company that has already done so much damage wreak further havoc. It's not what customers want, it's not what citizens want. Trust is so low in institutions and politicians, don't let this be another example where you let us down.</p> <p>From the material I have considered, these are my objections:</p> <p>Southern Water has a poor track record of treatment plant and pumping station failures, prosecutions for pollution incidents and failure to take prompt action to rectify problems, so how can they be trusted with complex technology that is required to treat final sewage effluent. At Havant, the risks of leachate being mobilised when constructing large tunnel shafts and hundreds of piles through the 13-metre deep contaminated landfill waste into the chalk aquifer below adjacent to Langstone Harbour are far too great.</p> <p>While research shows that customers prefer more natural solutions such as reservoirs and aquifer storage, I feel these far simpler and more cost-effective solutions are being ignored because the funding mechanism incentivises infrastructure-heavy solutions instead of encouraging development of sustainable solutions.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>Regarding the site being a former landfill site, building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p>                                                   |

|           | <p>We get plenty of free rain but only collect 1% of rainfall in the UK, when collecting and storing more water in new reservoirs and confined aquifers for use in dry summers will also help reduce the forecast increase in flooding, provide recreational sites for our communities and boost biodiversity.</p> <p>Meanwhile, millions of litres of water that Southern Water customers have paid to treat are lost every day to leakage in the distribution network. Without a faster programme of replacing the ageing pipe network, Southern Water will let leakage continue while wilfully pursuing the most environmentally damaging option. The Hampshire and Littlehampton effluent recycling schemes have the highest negative environmental impact score of any of the options considered. The energy alone for the Hampshire scheme will cost £3 million per year. Choosing such a carbon intensive solution, both in the construction and the emissions from operations is madness when we're facing the rapidly developing climate crisis.</p> <p>Please put people and our planet ahead of profit. This isn't how it should be.</p> | <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were</p> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>We are planning to build two reservoirs; the Havant Thicket Reservoir with Portsmouth Water and SESRO together with Thames Water and Affinity Water. Our plan also includes provision for building another one in Sussex. We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>We note the objection to the use of recycled water in Havant Thicket.</p> <p>Regarding the collection of rain water, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |

|           |          | <p>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>We introduced our Water Saving Audit Programme in April 2024 to help businesses reduce water consumption and save money off their bill by offering a tailored solution depending on their industry and line of work.</p> <p>Our audits generally include fixing leaky loos, taps, showers etc. and/or fitting water-efficient devices as well as recommending other water efficiency improvements your business can make such as rainwater harvesting.</p> <p>The audit (and the fixes) are free and we've partnered with the charity Groundwork to deliver this initiative.</p> <p>More information here <a href="https://www.southernwater.co.uk/save-a-little-water/water-saving-audits/">https://www.southernwater.co.uk/save-a-little-water/water-saving-audits/</a></p> <p>We aim to replace all our existing household and non-household (industry) water meters with smart meters during AMP8 (2025-2030). Given the challenges we face in the Central area, we have prioritised Sussex North WRZ and Sussex Brighton WRZ for roll-out of the smart metering programme for household customers.</p> <p>We are also reviewing an accelerated programme of non-household demand management in Sussex North WRZ to reduce industry and agriculture water consumption.</p> <p>We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions. In AMP8 we are investing £90m on natural solutions, including habitat and biodiversity improvements, reduced risk of spread of invasive non-native species, in river enhancements, catchment management with the agricultural sector and Catchment Partnerships, chalk stream enhancement and SSSI management. This is a long term programme that started in AMP6, and natural solutions are embedded in our long term delivery plans.</p> <p>We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and</p> |

|           |          | <p>Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by Defra and our regulators. We will continue to do so. Our plan has been produced in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years. This process allows for changes to be made to the WRMP to account for new information and consultation feedback. In rare cases, for example, where there are unresolved issues and substantial public interest exists the Secretary of State may call an inquiry or hearing.</p> <p>All water companies in England and Wales are required to plan for a drought of a 1-in-500 year severity. This requirement is set by the government, not by water companies.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> |

|           |                                                                                                                                                                                                                                                                                                   | <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>The water recycling proposals are not expected to impact the proposed recreational use of Havant Thicket reservoir.</p> <p>Supplementing Havant Thicket reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>The advanced treatment processes used in water recycling, including reverse osmosis, are used around the world to remove nutrients, pharmaceuticals and other impurities from water to create purified recycled water.</p> |
| WRMP467   | I am an applied aquatic biology postgraduate, a recipient of Southern Water's water services and a resident of the Isle of Wight, and I believe this new plan constitutes a great potential risk to both public and environmental health, that is also incredibly illogical and convoluted from a | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding effects of recycled water on local ecology, purified recycled water is extremely clean. Water quality in Havant Thicket reservoir and in the reject water released to the sea is</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | <p>development perspective, with the attached potential for great public disruption and expenditure, and I am pleading for its rejection.</p> <p>The impracticality of Southern Water's proposed plan and its disproportionate economic and environmental costs Southern Water's proposed management plan intends to address water deficits through methods which are extremely energy costly: desalination, effluent recycling, massive invasive pipeline construction, and even shipping water from Norway in certain cases.</p> <p>These high infrastructure solutions represent massive development and operation costs that the government will likely have to subsidise, and that Southern Water customers will certainly face the financial cost of. All of these methods have a high carbon impact and produce huge greenhouse emissions, which will only exacerbate the climate change problem currently impacting ongoing water availability. Especially considering the complexity associated with implementing these plans (in planning/approval and execution) which will invariably prolong projected timelines, increasing total effort/energy/cost expended.</p> <p>A potential risk to public health alongside inadequate communication to residents and customers</p> <p>It is completely unknown what the water quality impact of this effluent recycling will be and Southern Water has not adequately consulted their customers (myself included) about processed/recycled effluent being fed into water reservoirs and consumed. Reclaimed water is</p> <p>I see that Southern Water has outlined similar plans for the Isle of Wight, very close to where I live, in fact, and I am made incredibly uncomfortable by the thought. I know of many others who would be too, had they been given the luxury of being informed of these proposed developments.</p> <p>Especially given that these plans indicate crossing through (and developing on) old landfill sites, which risks massive contamination of the water supply and surrounding ecosystems, the complete long-term public health effects of, we cannot even conceive.</p> <p>What the research says</p> <p>This report indicates that current UK wastewater treatment procedures still allow too much faecal contamination into the water supply, presenting a viable threat to public health: <a href="https://raeng.org.uk/news/new-report-urges-upgrades-in-wastewater-infrastructure-to-protect-public-health">https://raeng.org.uk/news/new-report-urges-upgrades-in-wastewater-infrastructure-to-protect-public-health</a></p> <p>This meta-analysis found the Hepatitis A risk associated with 'treated wastewater' is 15%, compared to a 0.3% risk associated with regular drinking water: <a href="https://pmc.ncbi.nlm.nih.gov/articles/PMC9859052/">https://pmc.ncbi.nlm.nih.gov/articles/PMC9859052/</a></p> | <p>the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Desalination is an energy intensive process. However, the drawbacks of any option have to be considered in view of the benefits it delivers. We have excluded desalination options in cases where drawbacks outweigh benefits or where the environmental challenges cannot be satisfactorily overcome.</p> <p>The potential environmental impacts associated with desalination plants were a key reason for the desalination option in Southampton to be replaced. However, some of the environmental impacts are location dependent there are cases where these impacts can be mitigated to acceptable levels. We have submitted a research proposal to the Ofwat Innovation fund to investigate ways to reduce the environmental impacts of desalination plants.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible. Sea tankering from Norway is no longer included in our plan.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Regarding planning approval, the WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

-------------------------------------------------------|
|           | <p>In this study, groundwater sources in areas surrounding landfill sites were contaminated by landfill leachate (including heavy metals) to the point it constituted a viable threat to public health: <a href="https://pmc.ncbi.nlm.nih.gov/articles/PMC3561079/">https://pmc.ncbi.nlm.nih.gov/articles/PMC3561079/</a></p> <p>In this study, populations in China that were more regularly exposed to reclaimed water experienced greater occurrences of Legionella infection, indicating a potential threat to public health: <a href="https://link.springer.com/article/10.1007/s11783-021-1516-1">https://link.springer.com/article/10.1007/s11783-021-1516-1</a></p> <p>This study identified fish living in reservoirs containing wastewater experienced affected nervous systems, indicating the potentially serious long-term effects associated with effluent that are not yet fully understood: <a href="https://www.sciencedirect.com/science/article/pii/S0043135417310126">https://www.sciencedirect.com/science/article/pii/S0043135417310126</a></p> <p>My conclusion<br/>Altogether, the science literature paints a picture of a treatment practice that has not yet been mastered in the UK, that has us drinking increased amounts of faecal matter even when the treatment process functions within expectations, and a treatment process that also risks massively harming public health whenever/wherever that process fails.</p> <p>It seems extremely unwise to proceed with such a controversial course of action that risks the public health to such an extent while costing exorbitant amounts of money and requiring exceptional amounts of infrastructure construction alongside extensive/impractical logistical considerations.</p> | <p>and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by Defra and our regulators. We will continue to do so. Our plan has been produced in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years. This process allows for changes to be made to the WRMP to account for new information and consultation feedback. In rare cases, for example, where there are unresolved issues and substantial public interest exists the Secretary of State may call an inquiry or hearing.</p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers. MPs, Stakeholders and previous responders were all directly emailed regarding the consultation. We have received 1176 responses as part of rdWRMP24 consultation.</p> <p>Regarding the quality of recycled water, just as water across the country has its own distinct taste influenced by the geology of the local area, so the water taken from Havant Thicket reservoir may taste different from existing supplies due to the spring water being open to the elements, together with the addition of recycled water. However, the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this. For more information about water recycling, please visit the government website <a href="https://dwi.gov.uk/water-recycling/">https://dwi.gov.uk/water-recycling/</a></p> <p>No untreated wastewater will enter Havant Thicket reservoir. The HWTWRP scheme uses global best practice with a multi-barrier approach and monitoring to ensure that the water quality is exceptional when transferred to Havant Thicket reservoir. All drinking water sources will be subject to the same stringent quality checks and requirements as enforced by the Drinking Water Inspectorate (DWI), the independent regulator of drinking water in England and Wales. We do not have any evidence to suggest that the risk of Legionella is any higher than in other drinking water supplies.</p> |

|           |          | <p>Southern Water teams continue to work with a wide variety of regulatory organisations (Environment Agency, Natural England, Ofwat, Defra, Drinking Water Inspectorate), District Councils, County Councils, NGO's (e.g. RSPB, Wildlife Trusts, National Trust) and local community groups on project planning and our 5-year plans.</p> <p>Alongside our statutory duty to consult the general public on our Plans, we consult with local residents on an individual scheme basis to ensure we consider local issues in our work. As an example, we will be consulting local residents on the Isle of Wight in early 2025 in preparation of a planning application for our proposed water recycling project in Sandown.</p> <p>More information can be found on our Customer Engagement web pages <a href="#">Stakeholder Insight - Southern Water</a></p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We can confirm further details as follows.</p> <ul style="list-style-type: none"> <li>• The outcomes of the site selection for the Water Recycling Plant (WRP) were initially presented at the Summer 2022 Consultation, and a further review of the site selection was presented at the Summer 2024 Consultation.</li> <li>• The site selection has been based on identifying a site within a 1.5km boundary from Portsmouth Harbour Wastewater Treatment Works, to minimise pipeline lengths and the distance that treated wastewater would need to be transferred. Within this 1.5km boundary a total of 26 sites have been considered. These sites were reviewed against a range of environmental, planning, engineering, and construction criteria to identify a site that minimises impacts on the environment as far as possible, whilst ensuring the WRP could be delivered appropriately. This included reviewing the presence of historic landfill sites and known potential sources of contamination.</li> <li>• At this stage, it was anticipated that mitigation measures could be implemented to reduce any adverse effects to an acceptable level, and bespoke details would be developed depending on the site selected. A number of the sites considered were identified to have risks associated with historic landfill and ground contamination; as much of the area around Portsmouth Harbour Wastewater Treatment works is reclaimed land that has been filled with waste.</li> <li>• The remediation strategy will include a suite of recommended mitigation measures against the potential risks to human health, built environment, surface water and groundwater receptors for example construction methodologies that reduce new pathways e.g. continuous flight auger piles. These measures are robust, routinely utilised</li> </ul> |

|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                                                                                                                                                                      | <p>during brownfield development and are typically either industry common/good practice, or are required under the various legislative regimes relating to control of construction works.</p> <ul style="list-style-type: none"> <li>The outcomes of the site selection process presented at both the Summer 2022 and Summer 2024 Consultations resulted in the identification of the preferred site against the criteria that were considered. The other sites considered were not preferred for the various reasons including: <ul style="list-style-type: none"> <li>Risks due to proximity or connectivity to sensitive biodiversity and environmental designations associated with Langstone Harbour and the Solent</li> <li>Risk of flooding</li> <li>Loss of public open space within Havant</li> <li>Landscape and visual impacts, including the Chichester Harbour National Landscape designation</li> <li>Proximity to residential development</li> <li>Physical constraints such as access restrictions or challenging topography</li> <li>Presence of existing business premises</li> </ul> </li> <li>The initial site selection only considered undeveloped land, however following engagement with Havant Borough Council, several additional sites were identified on existing employment developments. These sites performed better against the environmental criteria, however they performed worse against the planning and engineering criteria, because development of the WRP on these sites would require the demolition of the existing employment development which would displace businesses and jobs.</li> <li>A land availability and best value review was also undertaken prior to the Summer 2024 Consultation on the shortlisted brownfield sites. This took into account various costs, including those associated with delivering the Water Recycling Plant at the site, mitigation of environmental effects, and the pipeline connections to Havant Thicket Reservoir and Portsmouth Harbour Wastewater Treatment Works. Out of the sites that were considered to be suitable, the selected site performed the best as it was undeveloped and required no removal of existing businesses and employment development.</li> </ul> <p>Regarding the use in the UK, the advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including “forever chemicals” in the purified recycled water produced.</p> <p>As set out in our 2023-24 annual report water quality compliance at our reservoirs is currently at 99.9%. We strive to improve this and are regulated by the Drinking Water Inspectorate (<a href="http://www.dwi.gov.uk">www.dwi.gov.uk</a>)</p> |
| WRMP468   | I am writing about Southern Water's proposal to recycle sewage for drinking water at Havant. I believe Defra has already rejected the scheme once, and I hope they will do so again. | Thank you for reviewing our rdWRMP24 and providing feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>It seems the lifespan of this project will only be 60 years, a longer term sustainable plan should be put in place.</p> <p>There are numerous environmental concerns, from the miles of disruptive pipeline needing to run through fields and forests, to use of a brownfield site for the reservoir, risking leakage of chemicals into natural water springs. These sit alongside research showing that the carbon impact of the scheme would be very high compared to other water supply options.</p> <p>There is a huge amount of detailed and professional information here, to back up the concerns of many local people:<br/> <a href="https://havantmatters.org/water/wrmp2024/">https://havantmatters.org/water/wrmp2024/</a></p> <p>Huge volumes of water leak from southern water pipes currently, which if a proper system of maintenance and repair was in place, would save vast tonnes of water annually. This should be prioritised.</p> <p>I understand many people have previously objected to the scheme. I don't think anyone wants to drink treated sewage! If allowed, it will likely become the norm, not an emergency measure, especially as general maintenance and improvement and management of the water network seems to be so poor.</p> <p>It seems the water companies in general are getting away with lining their own pockets, whilst raising customer bills, and without having a long-term, sustainable, environmental, model for running the water system in place.</p> <p>I hope Defra will review the options with the impact on the environment and local people in mind.</p> | <p>Chapters 4 and 5 of our main WRMP describe our plan from 2025 to 2075. This plan takes a long-term view. However, uncertainties related to both demand for water and supplies of water increase the further into the future we forecast. As a result, we adopt an adaptive planning approach. We explain what adaptive planning is in section 5.5.1 of the main WRMP and provide more details in Chapter 9 of the main plan and in Annex 21.</p> <p>Regarding the environmental impacts, our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. In regard to the location, SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for</p> |

|-----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>Regarding leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink.</p> <p>We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p> <p>Concerning customer bills, the way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is the case for HWTWRP.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines. The PR24 Proce Review for Southern Water is currently being re-determined by the CMA. This process will be complete by March 2026.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding the impact on local people, alongside our statutory duty to consult the general public on our Plans, we consult with local residents on an individual scheme basis to ensure we consider local issues in our work. As an example, we will be consulting local residents on the Isle of Wight in early 2025 in preparation of a planning application for our proposed water recycling project in Sandown.</p> <p>More information can be found on our Customer Engagement web pages: <a href="#">Stakeholder Insight - Southern Water</a>.</p>                                                                                                                                                                                           |
| WRMP469   | <p>My wife and I are customers of Portsmouth Water and the proposal to use effluent recycling will directly affect us. When the new reservoir is used, we would receive the recycled effluent, initially in a drought or emergency, but more routinely from 2040.</p> <p>We have the following comments over Southern Water's latest Draft Water Resources Management Plan:</p> <p>A) We have grave reservations about the competence and financial stability of Southern Water. We doubt it could create and operate its water/effluent recycling in such a manner that it would not encounter leaks and/or effluent contamination of the water supply to households or into the wider environment.</p> <p>B) We are concerned that its reliance on water/effluent recycling is not the best environmental option</p> <p>C) Due to its location adjoining Langstone Harbour, a Site of Special Scientific Interest, we believe that there are significant environmental risks associated with building a Waste Water treatment site at Broadmarsh, and transfer pipeline to [REDACTED]</p> <p>A. Southern Water's competence and financial stability<br/>Southern Water has a very poor record on sewage discharges and leaking pipework/sewers. It currently leaks 19% of all the water abstracted from the environment, which we as customers pay to treat. Even by 2050 it still plans to be leaking about 10% of all the treated water, including the new water manufactured at huge cost from the planned new effluent recycling schemes.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>A) Regarding any potential contamination, Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</p> <p>Regarding leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs.</p> <p>Our regulators the EA, NE and Ofwat are independent from Southern Water and they undertake an analysis of our plan. Their analysis looks at all aspects of the plan, including the options and risks. Our SoR shows the feedback we received from these regulators and how we have responded to it.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|           | <p>In 2021 Southern Water was fined a record £90 million for dumping sewage in the sea between 2010 and 2015. More recently it has caused huge disruption in Portsmouth with a string of sewer leaks on the Eastern Road A2030, one of only 3 arterial routes into the city.</p> <p>As a result, we have no confidence that Southern Water will not leak effluent into a pristine, chalk fed reservoir.</p> <p>Southern Water is also widely reported as being in financial trouble and at risk of defaulting on its debt, with S&amp;P reducing its rating following a £300m bond issue at an excessive 7.75% interest.</p> <p>B. Reliance on Water/Effluent Recycling<br/>Southern Water has placed its emphasis on what it terms Water Recycling which, in reality, means recycling effluent. This is a high energy use solution just to treat the effluent water up to drinking water, or near drinking water standards. This water will be routed to reservoir storage or back into rivers, for later abstraction, meaning that it will require a second treatment to bring it back to drinking water standards. On top of this, pumping costs need to be added to water storage and/or transfer. In particular the cost of pumping around 90m litres a day over 40km from Havant Thicket reservoir to [REDACTED] would be substantial.</p> <p>Climate change suggests that we will get warmer, wetter winters. This additional rain could be stored and used without the high cost and treatment proposed. Storage solutions do have an initial cost, but last well over 100 years as opposed to water recycling with additional ongoing equipment replacement costs etc. Southern Water seems to have rejected most other options with little or inadequate analysis, putting their reliance on a high cost, high energy, high risk solution.</p> <p>Previous consultations around De-salination were not favourable, but incur most of the same disadvantages now being proposed: Initial and ongoing cost, pipeline construction and pumping cost, and the environmental effects of concentrated brine/effluent stream being discharged into the Solent.</p> <p>C. Environmental Risks of Building Waste Water Treatment Plant at Broadmarsh and Long Distance Pipeline to [REDACTED]<br/>We believe that there are significant risks associated with developing the effluent recycling plant and the high lift pumping station on Broadmarsh. This is due to it previously being used as a landfill site with a vast array of contaminants, including ash from a former incinerator. Tunnelling and building on this site could cause release of contaminants into groundwater and/or Langstone Harbour as the tip was not lined.</p> <p>We also believe that there is an environmental impact of Reject Stream concentration. Although the Reject Stream is treated wastewater, Southern Water states that the impurities will be at a much higher concentration and consequently may not be allowable under its current permit from the Environment Agency. We have grave concerns that this reject stream would cause environmental damage to the Solent and Langstone Harbour when discharged through the Long Sea Outfall. Southern Water's preliminary environmental information report states a likely significant effect on the marine environment.</p> | <p>The options and risks are assessed independently by RAPID through the Gated Process, and by Defra through the WRMP process.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p>We are financially resilient and maintain a strong liquidity position, with the strong backing of our shareholders. They have injected more than £1.6 billion of fresh equity into the Southern Water group since they joined in 2021, and this financing has allowed us to spend £3bn during 2020-25 (or £1,500 per household) and implement our Turnaround Plan, to deliver for our communities and the environment.</p> <p>We acknowledge the ongoing challenges and uncertainty faced by all companies operating in the UK water and wastewater sector, but we are confident in our ability to deliver what we have set out in our future investment plans.</p> <p>B) We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d. A number of these plant can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Storage, such as reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We</p> |

|           | <p>Whilst we perfectly understand and agree with the desire to protect Hampshire chalk streams, we feel that a better solution could be found rather than creating an expensive and massive infrastructure project, using a 40Km pipeline to [REDACTED] with all of the environmental impact of construction, together with ongoing impact of high pumping costs between the sites. We do not feel that greener and cheaper alternatives are being investigated, such as moving water abstraction from the upper catchment of rivers to tidal limits, and aquifer storage.</p> <p>Finally, we have been disappointed at the lack of publicity for yet another consultation concerning the same plans for water recycling, and that interested parties can only view documentation at the Southern Water headquarters in Worthing.</p> | <p>will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>C) Using Havant Thicket reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including “forever chemicals” in the purified recycled water produced.</p> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated.</p> <p>Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we’re ensuring that environmental considerations inform the Project’s design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</p> <p>Environmental sustainability is a key criterion in our options appraisal process. This will continue to be the case for WRMP29.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased “Site 72”, an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations</p> <p>Regarding our engagement, our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We have received 1176 responses as part of rdWRMP24 consultation.</p> |
| WRMP470   | <p>I attended a local talk on SW (southern water) planning to recycle water locally. It raises concerns that there has not been local involvement or consultations with the community where this affects.</p> <p>I object to SW plans for a local water recycling plant near Langstone Harbour</p> <ul style="list-style-type: none"> <li>• SW (Southern water) has not considered other options to take into effect predicted climate change. There has been no consultation with their customers</li> <li>• It does not seem a cost effective or necessary option to tanker water from Norway at times of drought. The cost to customers would be unrealistic to people who are already struggling to meet their domestic bills. This option also raises risk of importing species not consistent to local waters</li> <li>• It seems SW has not acknowledged the ongoing Hampshire grid scheme, not taking into account the amount of water needed to meet the needs to all areas</li> <li>• There is risk of high carbon impact and greenhouse gases if effluent recycling goes ahead</li> <li>• There is high risk of leakage from waste dumps as SW plan to build on old sites which is a danger to the environment.</li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding consultation, there was extensive consultation, our consultation involved 8 roadshows throughout our supply area. Here consultees could visit and speak to the team directly. We also undertook 5 webinars, where we directly presented to attendees, who could ask questions about any aspect of our plan and the consultation. All of these activities were publicised on our website and on social media. The consultation was advertised to all of our customers via our newsletter. Previous respondents and local MPs and Stakeholders were directly contacted with information. We fulfilled the expectations from planning guidance regarding our visibility, but we welcome suggestions as to how you would like to see our engagement develop, and we will take that on board for future consultations. Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>Sea tankering from Norway is no longer included in our plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>They have not considered alternative local options which would be more cost effective, environmentally friendly and community based.</p> <ul style="list-style-type: none"> <li>• Aquifer storage locations would allow water to be collected in winter and stored for use when needed but SW have not investigated this option in any detail.</li> <li>• Additional Reservoirs would improve local community involvement and maintain natural wildlife in their normal habitat</li> <li>• Moving water abstraction to the mouth of the rivers</li> </ul> | <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>We have received 1176 responses as part of rdWRMP24 consultation.</p> <ul style="list-style-type: none"> <li>• Regarding our options selection, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</li> <li>• The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by Defra and our regulators. We will continue to do so. Our plan has been produced in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years. This process allows for changes to be made to the WRMP to account for new information and consultation feedback. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</li> </ul> <p>Regarding the quantification of cost, we calculate capital, operational and carbon costs for each option. These costs are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. Regarding funding mechanisms, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to</p> |

|           |          | <p>tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> <p>Our capital programmes are delivered in line with our regulatory commitments and operational needs. Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction.</p> <ul style="list-style-type: none"> <li>We have fully accounted for the availability of the Hampshire Grid and the flexibility it offers in moving water around Hampshire. However, the grid will deliver its optimum benefit where there is sufficient water available in Hampshire to transfer across the area. This will require the completion of the Havant Thicket Reservoir and the HWTWRP. As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</li> </ul> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <ul style="list-style-type: none"> <li>Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</li> </ul> <p>We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions. In AMP8 we are investing £90m on natural solutions, including habitat and biodiversity improvements, reduced risk of spread of invasive non-native species, in river enhancements, catchment management with the agricultural sector and Catchment Partnerships, chalk stream enhancement and SSSI management. This is a long term programme that started in AMP6, and natural solutions are embedded in our long term delivery plans.</p> <ul style="list-style-type: none"> <li>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are</li> </ul> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. We will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning</p> <ul style="list-style-type: none"> <li>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</li> </ul> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WRMP471   | <p>I write to you as a disappointed and appalled member of the Havant Borough. The proposed plan by Southern Water is short-sighted and absurd in what it proposes.</p> <p>The idea of importing water from Norway in a country where we see more and more rainfall is a uneconomical and environmentally-damaging solution. The investment into the infrastructure we already have is surely the most efficient and long-standing solution. Merely adopting the same approach we all would in our homes prevention and resolution is always better than a "patch-job" which this plan appears to be.</p> <p>The most logical long-term solutions surely would be:</p> <ul style="list-style-type: none"> <li>Repairing the multiple leaks in the SW network, which account for 10% of treated water loss</li> <li>Increasing storage facility for rainwater from wet periods to use in the Summer, both at the treatment level but also for individual households with rainwater butts provision</li> <li>Upgrades to the networks, in anticipation of inevitable population growth and climate change</li> </ul> <p>Given we do not live in a water-poor country, the way Southern Water manage water treatment is shocking - particularly with the environmental impact on the local water with all of the drops. It is simply not good enough, and everyone should be invested in better long-term solutions, not just profits.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Sea tankering from Norway is no longer included in our plan.</p> <ul style="list-style-type: none"> <li>Regarding investing in our infrastructure and leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward</li> <li>On more rainfall storage, the amount of water we can abstract is constrained by climate change impacts and reductions to river abstraction. Reducing abstraction from rivers is part of the Government's 25-year Environment Improvement Plan and you can read more about how we are trying to protect the River Test in our Drainage and Wastewater Management Plan (DWMP) for the Test and Itchen River Basin Catchment. Moreover, climate change is pivotal to much of the work we are doing.</li> </ul> <p>As stated in the Government's policy paper <a href="#">Water abstraction plan: Environment - GOV.UK</a> "A changing climate is likely to bring greater variability in rainfall and higher temperatures. We expect less groundwater recharge and larger seasonal variations in river flow as well as changes to when and how extended dry periods occur. Sustainably abstracted water bodies will be more resilient to changes in climate and drought pressures so addressing unsustainable abstraction will help improve resilience to climate change."</p> |

|           |          | <p>On increasing reservoir storage, we have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs. However, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage).</p> <p>Furthermore, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>Regarding our network, we have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities. Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>Chapters 4 and 5 of our main WRMP describe our plan from 2025 to 2075. This plan takes a long-term view. However, uncertainties related to both demand for water and supplies of water increase the further into the future we forecast. As a result, we adopt an adaptive planning approach. We explain what adaptive planning is in section 5.5.1 of the main WRMP and provide more details in Chapter 9 of the main plan and in Annex 21.</p> <p>Ofwat regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017.</p> <p>The £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>On the idea of importing water from Norway, this option is no longer included in our plan.</p> |

| WRMP472   | <p>In response to the revised water resources management plan proposed by Southern Water, I strongly wish that Southern Water would take a more realistic view of the water resources position and produce a more sustainable water management plan.</p> <p>I would urge them:</p> <ol style="list-style-type: none"> <li>1. to abandon, altogether, the effluent recycling scheme, an abhorrent, environmentally damaging and extremely costly plan.</li> <li>2. to abandon, also, such stop-gap, expensive and environmentally damaging measures such as the ridiculous idea of bringing tanker loads of water from Norway.</li> </ol> <p>Instead, I would suggest that:</p> <ol style="list-style-type: none"> <li>A. An intense programme of repairing and stopping leaks should be prioritised. It seems a very poor plan to merely reduce leakage by 53% by 2050.</li> <li>B. Our precious chalk streams and rivers should be guarded and protected, instead of them being robbed and polluted.</li> <li>C. The capture and storage of our prodigious winter rainfall should take precedence, which in turn would thereby reduce disastrous flooding.</li> <li>D. Schemes to increase water storage capacity at existing works should be prioritised.</li> <li>E. The idea of a free water butt scheme for customers, as trialled in the Isle of Wight, is admirable. Everyone could do a little more to conserve the water supply.</li> </ol> <p>Finally, the effluent recycling scheme cannot represent the best value for customers. It would be exceedingly expensive. There are many ways, some of which are mentioned above, of using those costs in a far better, more environmentally satisfactory way, instead of in one which is wholly repugnant.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1) We note the objection to the use of recycled water in Havant Thicket.</p> <p>Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor.</p> <p>We have also looked at factors such as volume of water that an option can provide, its resilience to climate change, environmental impact etc. In addition to capital and operating costs. The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>Concerning the carbon impact of large infrastructure schemes, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We aim to deliver net zero carbon by 2050 and we are expanding our carbon accounting processes to measure the impact of our capital delivery programme. We recognise that carbon may be significant from this option however, due to the required transport methods and temporary nature of the option. We will continue to assess the carbon footprint of this option and balance it against the environmental benefit of protecting the River Test in times of drought.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are</p> |

|-----------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |          | <p>taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>2) Sea tankering water from Norway is no longer included in our plan.</p> <p>A) Regarding leakage reduction, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period.</p> <p>We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>B) All our water supply options are continually appraised as part of our adaptive planning process and sea tankering was one water supply option being considered but this option is no longer included in our plan.</p> <p>C) Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>D) Recycled water options are generally only considered where the groundwater is deemed to be no longer available, due to the underlying baseline needs of the environment (under environmental regulations). The HWTWRP scheme is designed to provide water resources during severe and extreme droughts, when natural groundwater and river water has been depleted due to limited rainfall. It will also help to protect natural chalk streams by allowing us and Portsmouth Water to reduce our abstraction impacts on these unique habitats across East Hampshire and West Sussex.</p> <p>E) We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Regarding the quantification of cost and value for money, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>You can find out more about our carbon policy here:<br/> <a href="https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/">https://www.southernwater.co.uk/about-us/our-policies-and-standards/carbon/</a></p> |
| WRMP473   | <p>A number of concerns have been raised commenting upon the lack of trust the consumers of Portsmouth Water have on being able to control the quality of their water supply should the opportunity of Southern Water be given to add processed sewage to the Havant reservoir. As Southern Water are a major stake holder in the construction of the reservoir the decision on the quality of the water added to the reservoir might not be that of Portsmouth Water.</p> <p>In the event of a failure in the processing of the sewage by Southern Water resulting in fowled water entering the reservoir,</p> <ol style="list-style-type: none"> <li>1. What back up source of water will be available for customers, For how long will the back up be available, and</li> <li>2. How will the fouled reservoir water be processed.</li> </ol> <p>and</p> <ol style="list-style-type: none"> <li>3. How long before a normal supply is restored,</li> </ol> <p>The publics Trust in Southern Water is severely tarnished over the years by its inability to run a successful sewage processing system. I am one of those potentially impacted by this possible scenario.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>1, 2 &amp; 3) Regarding possible operational issues, the plant will monitor the quality of the treated effluent from Portsmouth Harbour WTW and will shut down if this moves outside of the treatable parameters. The recycled water will also have a lower nitrate level than the spring waters, due to the treatment at Portsmouth Harbour WTW.</p> <p>We deliver our capital programmes in line with regulatory commitments and operational needs. We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers.</p> <p><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           | Thanks for the opportunity to record my concerns .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | We thank you for your engagement and feedback with our rdWRMP24 consultation. Your comment has been noted. Our website will contain the development of our WRMP24 and, going forward, our WRMP29.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WRMP474   | <p>I am submitting this email to object to the Southern Water Resources Management Plan. Please note the following objections:</p> <ol style="list-style-type: none"> <li>1. Levels of pollution of Langstone Harbour exiting the sewage outfall pipe should be reduced to protect this environment. The Southern Water sewage recycling plan would increase levels of dangerous pollutants from the 1960's landfill site where the recycling plant will be built. It will also lead to more concentrated sewage being pumped out into Langstone Harbour. I am one of the last residents in this area to swim in Langstone Harbour. It is unacceptable to put people at risk in this way.</li> <li>2. Havant Thicket reservoir was originally planned to collect water via chalk fed natural sources and supplied to Hampshire residents such as myself for drinking. Southern Water intends to pump water recovered from sewage into this reservoir. With their record of fines for pollution they cannot be trusted to safely recycle sewage water into this reservoir. We need to collect more rainwater and store it in new reservoirs like Havant Thicket and not pump recycled water into this reservoir. The change of use for this reservoir from that originally devised by Portsmouth Water as approved on that basis by Havant Borough Council should nor be allowed.</li> <li>3. Southern Water will make more profit by building unnecessary infrastructure than by collecting more water from natural sources e.g. abstracting water closer to the tidal zone in this coastal area. The new Labour government should block this and change the funding model which encourages water companies to do this.</li> <li>4. This is not an energy efficient way to supply water in this area. Stored water in Havant Thicket reservoir should be allowed to flow downhill to supply the coastal population and not pumped uphill back into the reservoir in the form of recycled sewage.</li> </ol> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ol style="list-style-type: none"> <li>1) Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</li> <li>2) We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></li> </ol> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir.</p> <p>The HTR TCPA is for raw water, but our DCO will change the operational use of the reservoir so that it can store the mix of water that will be used with the HWTWRP. The Rapid G1 and G2 submissions are not related to the planning process.</p> <ol style="list-style-type: none"> <li>3) Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company</li> </ol> |

| Reference | Feedback                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</p> <p>4) Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>A further consultation on water quality was held in March-April 2025. This included details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations.</p> |
| WRMP475   | <p>I am sending this email to object the Southern Water revised draft Water Resources Management Plan.</p> <p>A key part of this plan is to take effluent from [REDACTED] sewage works, build a treatment plant on a former landfill site next to the coast at Broadmarsh, transfer the treated water uphill to be stored in Havant Thicket Reservoir and to pump the residual concentrated effluent into Langstone Harbour via an already inadequate outfall pipe which allows pollution to come in with the tidal flow rather than going into the open sea in the Solent.</p> <p>This involves Portsmouth Water building the dam at the southern end of Havant Thicket Reservoir with a dual pipeline which will allow Southern Water to pump their recycled water from the coast up into the reservoir for storage and further treatment. This change of use for Havant Thicket reservoir should not be allowed by DEFRA. The original project was approved by Havant Borough Council because it was designed to be fed by rainwater filtered through chalk and allowed distribution of water downhill to supply drinking water to the more urban coastal population. This scheme was energy efficient and designed to be in harmony with the environment in this area. Southern Water should not be allowed to turn this proposal on its head by using an energy intensive scheme to recycle water recovered from sewage using reverse osmosis and pumping it uphill to Havant Thicket Reservoir radically changing its use</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <p>Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           | from that originally proposed. Further Environmental pollution of Langstone Harbour resulting from this scheme should also not be allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Regarding planning consent for Havant Thicket, Southern Water's Gate 1 and Gate 2 submissions to its regulators in both 2020 and 2021 confirmed investigation of alternative options for both water recycling and water transfers involving Havant Thicket Reservoir. A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply.</p> <p>Impact from construction of the pipelines will be temporary. All land used for the construction of pipelines will be reinstated.</p> <p>Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</p> <p>Water from the water recycling plant will be used all year round to supply Southern Water customers, following further environmental restrictions including abstraction limitations from Natural England's Common Standards Monitoring Guidance conditions. These conditions set new year-round flow targets for the River Itchen and proposed targets for future implementation on the River Test, reducing the water available, both in the summer and winter.</p>                                                                                                                   |
| WRMP476   | <p>It is clear that very significant research work, analysis and consultation has been carried out by organisations, which include scientific, conservationists, ecologic, water supply experts and of course financial organisations into the basic problem we have that our climate is changing and more and more of the population what to live on the south cost of England, all with their various objectives. The only thing they have in common, is that we will require more drinking water as we move further into the future.</p> <p>However, the most comprehensive and thoroughly researched and presented document I have read is the review of Southern Waters 'Ware Resources and Management Plan' which exposes the reality of the poor plan presented by Southern Water. Now I am not an expert of any of this and personally do not need to be to that SW only real concern is making more money from a project which overriding concern should be the provision of clean, high quality water to their area of responsibility. Sadly, even I can see the project is flawed, driven by profit and will actually do more damage to our area supply area, and positively beyond.</p> <p>Full email.....</p> <p>It is clear that very significant research work, analysis and consultation has been carried out by organisations, which include scientific, conservationists, ecologic, water supply experts and of course financial organisations into the basic problem we have that our climate is changing and more and more of the population what to live on the south cost of England, all with their various</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding climate change, through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <p>objectives. The only thing they have in common, is that we will require more drinking water as we move further into the future.</p> <p>However, the most comprehensive and thoroughly researched and presented document I have read is the review of Southern Waters 'Water Resources and Management Plan' which exposes the reality of the poor and wrongly thought through plan presented by Southern Water. Now I am not an expert on much of detail on this and personally do not need to be to see that SW only real concern is making more money from a project which overriding concern should be the provision of clean, high quality water to their area of responsibility. Sadly, even I can see the project is flawed, driven only by profit and will actually do more damage to our supply area and, positively beyond.</p> <p>While the report provides much evidence that SW's approach is badly thought through, conversely, the review puts forward a much simpler approach to the problem which would use nature rather than chemicals and disruption to the existing environment as a basis for their proposed solution. Basically, we need more water storage provided by aquifers and reservoirs so that during winter when water is more plentiful it can be naturally stored and moved to drier regions if and when necessary via a network which apparently is not of interest to Southern. Further, Southern should invest in the repair of leaks which account for the huge amount of clean water which is effectively just 'thrown away' each day. (See latest figures in the report. Existing and the installation of new waste infrastructure at sewage stations and pipelines could, and at reasonable cost to SW be upgraded to allow much more natural rainwater to be captured and processed instead of allowing it to be just disposed of into the sea.</p> <p>Given all these opportunities to capture and conserve water at a much lower cost than chemical approaches which are open to SW, why does SW want to send even more money, (which they do not have) and at a huge rise in the cost to its customers, on new untried approaches which have never been used before in the U.K. with its unique climate and geography? It just not make sense! And who and why would anyone, investors or customers trust a company like SW with such a terrible history of managing the infrastructure they already have, with another huge project while they can't even manage what they already have, the need to pump 10,000's of litres of untreated into Chichester Harbour each while still incurring the financial losses they make everyday.</p> <p>Please stop this project now before Southern Water spend even more money on this project and insist they fix the problems they already and implement some of the more sensible and nature based options open to them.</p> | <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In the business plan submitted in 2024 for the 2025 to 2030 five-year regulatory period, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders. We are confident that when the Competition and Markets Authority (CMA) makes its PR24 determination it will provide sufficient funding for the investment in the 2025-2030 period.</p> <p>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A Chalk MAR scheme (feasibility trial) is included in our plan for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>We have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</p> <p>We have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental</p> |

We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well.</p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in Havant Thicket reservoir and the Solent and potential mitigations</p> |
| WRMP477   | <p>I am a resident of Hayling Island who is writing to express my deep concerns over and strong opposition to Southern Water's effluent recycling plan. I implore you to use your powers to reject it and require Southern Water to develop a more sustainable plan that works with climate change and puts the environment before profit. I ask too that you reform our approach to how we manage water resources in the future.</p> <p>I have outlined below my main objections to Southern Water's proposed effluent recycling scheme and the facts as I understand them.</p> <ul style="list-style-type: none"> <li>Why is change required: Climate change means that wetter winters and drier summers are predicted for the future. Our population is also likely to grow. We will require more water. Currently, we only collect 1% of rainfall in the UK and Southern Water loses 100 million litres of water every day to leaks, so the provision we have is inadequate to meet predicted needs. Southern Water's abstraction licence requires them to reduce the amount they are taking from [REDACTED]. I understand that this is a significant factor driving Southern Water to claim that we need the effluent recycling scheme instead.</li> <li>What solutions would address the problem: We could build new reservoirs and use underground confined aquifers to collect more water; whilst also increasing efforts to maintain</li> </ul> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ul style="list-style-type: none"> <li>The leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>our existing systems and repair leaks. (The statistics above demonstrate how shockingly we perform in these areas at the moment.) We could develop storage closer to where water is required to reduce infrastructure and environmental impact and help to reduce the forecasted increase in flooding, provide recreational sites for our communities and - if we build more reservoirs - provide biodiversity opportunities. We could move abstraction too.</p> <ul style="list-style-type: none"> <li>A former Managing Director from Southern Water believes that if you move abstraction on the River Test and River Itchen to the tidal limit (i.e. the end of the freshwater river) the whole of the freshwater section of the river would be protected from abstraction, which would restore natural flows, including in a drought. He does not support effluent recycling and believes this solution alone would solve the problem. If this change were implemented, there would therefore no longer be any need for the effluent recycling scheme. (Reduction of flows into the estuary is supported by the EU Water Framework Directive. Consumers would still be getting river water, which would also reduce the risk of rejection - please see below *)</li> <li>Southern Water could potentially implement this change quite simply and quickly. It would require a new (9km) pipeline in a tunnel to get the water from the tidal limit to [REDACTED]. Alternatively, the water could travel 1km to Portsmouth Water's [REDACTED] works on the River Itchen, which is already close to the tidal limit. This is vastly less infrastructure than that required for the effluent recycling scheme.</li> <li>There would be no change to the situation for the estuary because the amount of freshwater flowing downstream past the new abstraction would be unchanged. This would remove the pressure for abstraction licence reform to reduce the amount Southern Water can take from [REDACTED] as there would no longer be an impact on the freshwater section of the river.</li> <li>For the Itchen, moving abstraction to the tidal limit would protect 12 km (7.5 miles) of the river and the Itchen navigation from abstraction, which would also be of massive benefit to the environment.</li> <li>What are the disadvantages to the proposed effluent recycling scheme:</li> <li>As a Nationally Significant Infrastructure Project, the effluent recycling scheme would deliver huge financial benefits to Southern Water and its stakeholders (c£45 million in profit). However, for the environment and everyone else, including consumers, I can see only 'negatives'.</li> <li>This project would involve a vast amount of energy and investment (both initially and in the future to maintain it and retain the skilled personnel who would need to operate it). It would also require reliance on another country were we to ship water from Norway. The recent energy crisis has demonstrated that such a strategy comes with considerable risks. All this would be at a time when many consumers are struggling financially and we are supposedly striving to reduce our carbon footprint and national emissions, a time of energy emergency. Cop29 is currently considering how developed nations can support developing nations who are being encouraged to reduce their carbon footprint and here a major water company is apparently advocating a scheme which would increase ours! I do not wish this to be done in my country or in my name, especially given the sustainable, more environmentally responsible alternatives that are available.</li> <li>There would be large-scale disruption to and destruction of natural habitats due to the scheme, including new treatment works, bore holes and vast pipelines (e.g. a 40km pipeline to</li> </ul> | <ul style="list-style-type: none"> <li>Regarding storage, reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</li> </ul> <p>Regarding the potential to develop small sustainable schemes, we have to meet very challenging demand management and Environmental Destination targets set by the Government. The resulting scale of supply-demand balance deficits requires us to be ambitious as well as innovative to meet future challenges. Environmental sustainability is a key criterion for including options in our plan, regardless of the size of the option.</p> <p>A Chalk MAR scheme (feasibility trial) is included in our plan for South Hampshire. Lower Greensand ASR schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <ul style="list-style-type: none"> <li>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish.</li> <li>See reply to point 3 regarding moving the abstraction point</li> <li>Our regulators the EA, NE and Ofwat are independent from Southern Water and they undertake an analysis of our plan. Their analysis looks at all aspects of the plan, including the options and risks. Our SoR shows the feedback we received from these regulators and how we have responded to it.</li> </ul> <p>The options and risks are assessed independently by RAPID through the Gated Process, and by Defra through the WRMP process.</p> <ul style="list-style-type: none"> <li>The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process. We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities.</li> </ul> <p>Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <p>██████████, another 30km pipeline to provide additional supplies from the reservoir to the West Sussex area, which is not on the published plan, pipes to pump water 90m from ██████████ up to Portsdown Hill in Portsmouth).</p> <ul style="list-style-type: none"> <li>There would be risks of leachate because of the location of the proposed processing plant at Broadmarsh. Here there are risks associated with drilling down many meters into what was previously a landfill site with no engineered lining. If all other considerations are somehow put aside and the scheme were to be accepted, it is vital that Southern Water are required to find an alternative location for the recycling plant at Havant, to avoid these significant risks.</li> <li>There is a risk too of reservoir overflow into the Hermitage streams, which has not even been modelled yet, so cannot be properly taken into account.</li> <li>Fill material will contain solvents and hydro carbons which are easily mobilised in groundwater and could pass out into the harbour.</li> <li>There will be massive financial costs to be passed on to the consumer: £3 million per year to provide the energy alone for the Hampshire Scheme, without the construction and maintenance costs for all the required infrastructure and specialised processes. The projected costs are spiralling all the time and have increased by millions already this year. Why should consumers have to pay for such a scheme when surveys show they don't want it; and perfectly viable and more sustainable solutions are available instead, but have not been publicised or consulted on?</li> <li>The scheme is unsustainable: I believe the membranes used in the reverse osmosis process to recycle the effluent would be similar to those at the desalination facility on the Thames, which are difficult and costly to maintain; and have broken down. The effluent recycling infrastructure would last for 60 years, after which it would have to be replaced. This is not a responsible option. It leaves no legacy for the future. We need sustainable solutions. They exist but are not being given due weight and proper consideration.</li> <li>Safety and accountability: There is no requirement to have independent monitoring of the reservoir or 'finished products' i.e. the recycled and wastewater. Portsmouth Water, who own the reservoir, will rely on Southern Water for analysis and maintenance. Contaminants would still remain in the water after it has been treated and in the concentrated wastewater that would be pumped into the sea via the outfall in the Solent. For every 80 mega litres of water processed, 20 mega litres will be ejected via the long-sea outfall. The brine will be warm. How can this fail to have an effect on the marine ecology - and, ultimately, us!? Ecoli is already discharged from the existing outfall. What evidence is there to show the new discharge would be safe or monitored and managed? Is there a risk to ecology in the reservoir itself linked to the water quality? This is technology that is untested for use in this way. Models showing a 72 hour cycle (based on publicly available data) show that the waste from the outfall would circulate around an area that would include a large part of the Solent coastline and the ecologically important and sensitive area of Chichester Harbour. We would risk the loss of unique biodiversity in the area, together with leisure and tourist facilities. There would be a risk too in respect of contamination of our spring-fed reservoir.</li> <li>Quite apart from the financial cost and the carbon emissions involved, if water were to be shipped in from Norway at times of drought (an idea which Southern Water themselves had initially dismissed), non native species could be introduced to our water supply, with unknown consequences. Are there plans to take account of and mitigate against this?</li> </ul> | <p>plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan. Ofwat also regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <ul style="list-style-type: none"> <li>Concerning the carbon impact, water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were.</li> </ul> <p>Through the Water Industry National Environment Programme (WINEP), investigations are carried out to determine the sustainability of water company abstractions. Following these investigations the Environment Agency will change licences where necessary to achieve sustainable abstraction. As a result, in some areas, water companies need to look for alternative sources of supply. In some cases, this will necessitate investment in new large-scale infrastructure schemes which, whilst having a benefit to long term security of water supply and the protection of freshwater ecology and habitats, could have an increased carbon impact.</p> <p>As WRMP24 options are constructed, our baseline emissions will evolve. This may increase our total emissions as infrastructure projects with higher carbon costs, such as water recycling plants, are introduced. We will need to continuously adapt our solutions to reach and maintain operational Net Zero, while driving down embodied emissions through our supply chains as much as possible.</p> <p>We are firmly committed to reducing the greenhouse gas emissions released through delivery of our essential water and wastewater services. Our Net Zero Plan outlines the actions we are taking to reduce our carbon footprint, while also supporting the realisation of wider, long-term decarbonisation commitments, including the UK Government's legislative target to reach Net Zero by 2050.</p> <p>The actions set out in our Net Zero Plan will be key to mitigating the greenhouse gas emissions associated with the options we have proposed in our WRMP24 strategy.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           | <ul style="list-style-type: none"> <li>Reliability: Southern Water would effectively be 'self policing' if this scheme went ahead e.g. water testing at the reservoir at Havant Thicket would only have to take place once a month, by which time any contaminants would already have passed into the drinking water supplied to the local population. How can that be allowed? How is that acceptable? Can Southern Water be relied upon to operate this vast and new operation safely? Its track record of breaches and fines with existing technology is shocking. As it has been shown unequivocally that Southern Water cannot be trusted to operate and maintain its current traditional infrastructure without causing pollution, what hope is there of it safely operating the complex advanced effluent recycling treatment technology without incident?</li> <li>Carbon neutral aims: How can Southern Water say they are aiming to be carbon-neutral by 2030, yet at the same time propose this scheme that will require such huge amounts of energy? * Water from effluent recycling would taste different to what we have currently. This and concerns about the reliability and oversight of the recycling process could lead to mass consumption of bottled water if our future tap water is not trusted or liked. How is that environmentally responsible? How does that support a vision of being carbon-neutral?</li> <li>The effluent recycling is supposedly a scheme that would address supply shortages in drought situations. However, it is misleading to think of it as operating only at those times. In order to maintain the system, it would have to run for 365 days a year for the water and pipes to remain 'sweet'. (12 Olympic size pools of water would be required every day. This is not sustainable.)</li> <li>Lack of equal consideration given to viable alternatives: Despite having originally undertaken to do so, Southern Water have not contacted their consumers directly to give them 'the full picture' and an opportunity to be properly informed about all the options. They have not taken the chance to show themselves to be transparent and open to debate by supplying information regarding alternatives to the effluent recycling proposals. Why would they have changed their mind about contacting their customers directly? There would have been no additional costs involved; the information was to have been included in Portsmouth Water billing communications. It's hard not to feel cynical and conclude that they did not wish consumers to have the information provided to them in this way because (i) they did not wish them to have easy access to it and (ii) they anticipated an unfavourable response to their effluent recycling proposal - which, in fact, was the case when it was considered - and rejected - in its first iteration. I feel that this further undermines trust in Southern Water as a whole.</li> <li>The future - we need a completely new approach: We need change and for government to be more actively involved. We need to: ensure our water resources are planned in a more sustainable way i.e. government to make more challenging leakage reduction targets and require a drastic increase in mains replacement programmes, amend abstraction licences, develop variable tariffs that reward those who conserve resources, legislate and update guidance so that the environment is put before profit e.g. by changing water company funding to stop incentivising water companies to develop infrastructure heavy solutions but instead be able to profit from and make a strong business case for making repairs and investing in maintenance so that this becomes a much more attractive option to investors. Water is such a vital resource that affects us all. The measures that get taken forward as a result of this consultation will have far-reaching consequences, not just for us and our local</li> </ul> | <p>Sea tankering from Norway is no longer included in our plan.</p> <ul style="list-style-type: none"> <li>The majority of the pipelines will be installed using trenches across farmland. In other locations, such as populated areas or where there are particularly sensitive environmental constraints, trenchless techniques will be used. Installation of the pipelines would be controlled by various management plans, including a Construction Environmental Management Plan.</li> </ul> <p>Building on former landfill sites is commonplace and, when done carefully, poses little risk to the environment. SW has purchased "Site 72", an industrial site which includes former landfill, near Portsmouth Harbour WTW as the proposed location for the water recycling plant. We intend to locate all of the process plant above ground on foundations piled down to firm strata below the landfill. Any potential impact from construction or operation of the project, and proposed mitigation, is part of our ongoing Environmental Impact Assessment. Best-practice measures and construction techniques will be used to fully address any risks relating to the landfill. We have provided further insight into our decision-making on site selection, risk consideration and mitigation measures in our main statement of response.</p> <ul style="list-style-type: none"> <li>Our Environmental Impact Assessment is providing a rigorous and proportionate approach to assessing and managing the effects of the Project and we're ensuring that environmental considerations inform the Project's design. We have already embedded several measures at the early design stages of the Project to avoid or minimise potential environmental effects.</li> <li>Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</li> </ul> <p>The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including "forever chemicals" in the purified recycled water produced.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <ul style="list-style-type: none"> <li>Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. Regarding funding mechanisms, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The</li> </ul> |

|           | <p>environment, but nationally and, potentially, globally. I find it hard to emphasise how deeply alarmed I am and how very strongly opposed to Southern Water's effluent recycling proposal.</p> <p>Thank you for considering my views.</p> | <p>Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> <ul style="list-style-type: none"> <li>• A Water Recycling Plant would be typically expected to last 60 plus years but have a number of upgrades every 10-20 years of the electrical and mechanical plant.</li> <li>• The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</li> </ul> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations.</p> <ul style="list-style-type: none"> <li>• We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a> Our capital programmes are delivered in line with our regulatory commitments and operational needs.</li> </ul> <p>The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</p> <ul style="list-style-type: none"> <li>• Please see point 9 regarding the carbon impact.</li> <li>• Please see point 9 regarding the carbon and energy.</li> <li>• We have a dedicated team who scope and deliver natural solutions to reduce the water quality risks to our drinking water supplies, and deliver ecological resilience schemes as part of a suite of mitigation measures, including abstraction licence reductions, to address identified impacts from our abstractions. In AMP8 we are investing £90m on natural solutions, including habitat and biodiversity improvements, reduced risk of spread of invasive non-native species, in river enhancements, catchment management with the agricultural sector and Catchment Partnerships, chalk stream enhancement and SSSI management. This is a long term programme that started in AMP6, and natural solutions are embedded in our long term delivery plans.</li> </ul> |

|           |          | <p>Regarding transparency, our Statement of Exclusion published on our consultation web page (see below) detailed those documents that were not published online due to material being commercially sensitive, or restricted under section 37(B) of the Water Industry Act 1991, or 'the Act' (as amended by the Water Act 2003). We are required to make sure that all published documents comply with the Security and Emergency Measures Direction (SEMD). Restricted documents/ sections are available for view via appointment in our head office in Worthing. For the fdWRMP24 we are making as many of the documents available on our website as possible although some information has been redacted so as to comply with SEMD and, in line with guidance, we do not publish any material of a commercially confidential nature.</p> <p>The information provided in many of the documents is very technical with many requirements set out in statutory process and supporting guidance. As this is unavoidable we produced a non-technical summary document for those seeking a high level understanding of our plan. You can view the publicly available documents on the link below.<br/> <a href="https://waterresources.southernwater.co.uk/find-out-more/">https://waterresources.southernwater.co.uk/find-out-more/</a></p> <p>Our consultation engagement with our customers and stakeholders is described in Annex 5 of our rdWRMP24 Technical Report.</p> <p>In addition to publishing the majority of our rdWRMP24 documents on our website, we arranged 8 roadshows across our supply area during October-November; 3 in our Western area, 2 in our Central area and 3 in our Eastern area. Southern Water staff were available at these roadshows to answer any questions on our rdWRMP24. Hard copies of our rdWRMP24 Technical Report and Non-Technical Summary of our plan were also available for attendees to view and take with them. In addition, we provided 5 area-specific webinars of 75 minutes duration each whereby we presented key features of our plan during the first 35-40 minutes with the remaining time allocated to Q&amp;A.</p> <p>We released a press release regarding the consultation, which was picked up by major newspapers; The Guardian and the Financial Times. We produced both targeted and non-targeted adverts on social media. We also publicised the consultation in our newsletter which went out to all of our customers.</p> <p>MPs, Stakeholders and previous responders were all directly emailed regarding the consultation.</p> <p>We have received 1,176 responses as part of rdWRMP24 consultation. We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                             | <p>option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</p> <ul style="list-style-type: none"> <li>The WRMP process is set out in primary legislation, within Defra directions and in guidance issued by the Environment Agency (EA), Natural England, Ofwat and Natural Resources Wales. We, Southern Water, have produced this WRMP24 in line with Directions and guidance issued by Defra and our regulators. We will continue to do so. Our plan has been produced in collaboration with other water companies within the South East as part of the Water Resources South East (WRSE) regional group. We provide annual reviews of our WRMP to regulators and produce an entirely new WRMP every five years. This process allows for changes to be made to the WRMP to account for new information and consultation feedback. In rare cases, for example, where there are unresolved issues and substantial public interest exists the Secretary of State may call an inquiry or hearing.</li> </ul> <p>As mentioned above, the Government launched an Independent Commission into the water sector and its regulation on 23 October 2024, led by Sir Jon Cunliffe. The Commission is part of a government review of the water industry and will report recommendations to the Government in Q2 2025 (between April and June) on how to tackle inherited issues in the water industry. We expect the Commission to make recommendations on water sector funding and an approach to infrastructure as part of its report.</p> |
| WRMP478   | As a long time resident of Hayling Island iam concerned about the quality of our tap water. In fact I now buy bottled water for drinking.                                                                                                                                                                                                                                   | <p>Thank you for reviewing our rdWRMP24 and providing feedback</p> <p>Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</p> <p>As set out in our 2023-24 annual report water quality compliance at our reservoirs is currently at 99.9%. We strive to improve this and are regulated by the Drinking Water Inspectorate (<a href="http://www.dwi.gov.uk">www.dwi.gov.uk</a>).</p> <p>Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements. The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome to drink. We are working closely with international experts, regulators and environmental organisations to develop the plans and ensure this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                       |
| WRMP479   | I strongly object to the revised draft Water Resources Management Plan put forward by Southern Water. I am extremely disappointed that the revised plan is extremely similar to the previous plan that was rejected. This shows that Southern Water are not prepared to seriously consider other options which would be more sustainable and more environmentally friendly. | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <ul style="list-style-type: none"> <li>Regarding effects of recycled water on the chemistry of Havant Thicket reservoir, purified recycled water is extremely clean. Water quality in the reservoir and in the reject water</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           | <p>I do not support the Hampshire effluent recycling via Havant Thicket reservoir for the following reasons:</p> <ul style="list-style-type: none"> <li>• It will affect the quality of the water in the reservoir (particularly given that Southern Water have no plans to identify and improve the management of risks in the sewage catchment area).</li> <li>• Even with treatment not all contaminants can be removed, so the reservoir will get contaminated.</li> <li>• I am also concerned about the impact of the scheme on people's perception of tap water and the likelihood of people changing to bottled water instead. This has many negative environmental impacts (e.g. increased plastic use, and problems with disposing of the bottles) as well as the cost implications of having to pay extra for bottled water which will impact the most on the poorer members of our society.</li> <li>• As a Portsmouth Water customer I do not want the spring water in the reservoir being contaminated, and I am worried about the significant change in water composition in the reservoir.</li> <li>• Concentrated reject water going into the Solent is also a significant concern.</li> <li>• As a Southern Water customer I do not want the significant extra costs on my bill that will come with this effluent recycling scheme.</li> <li>• The lack of legacy for this scheme makes it much less desirable than other options like aquifers and reservoirs for storing rain water which would have a legacy.</li> <li>• Southern Water have a poor record of behaviour resulting in fines, and therefore cannot be trusted with an effluent recycling scheme (especially as there are no plans for independent monitoring). There would also need to be improved controls and monitoring in the sewer catchment.</li> </ul> <p>I am also disgusted that Southern Water would be allowed to make a profit out of the new infrastructure schemes – they are clearly putting profit ahead of sustainability. They are also not listening to their customers (despite their claims that they do).</p> <p>Tankering in water from Norway is a ridiculous idea. It will be expensive, bad for the environment (e.g. emissions from sailing all those miles), and risks introducing non-native species. There could also be water quality issues. Southern Water themselves have previously rejected this option, so why have they put it back on the table?</p> | <p>released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025. Water recycling inevitably uses more energy than conventional sources of supply such as groundwater or rivers, due to the advanced treatment techniques used. However, those conventional sources are no longer available to us as they once were. Just like water across the country has its own distinct taste influenced by the geology of the local area, the water taken from the reservoir may taste different from existing supplies due to the spring water being open to the elements.</p> <p>The taste would also vary if recycled water is added, but the water at customers' taps will continue to meet strict drinking water quality standards and be wholesome.</p> <p>A further consultation on water quality will be held in 2025. This will include details of the likely impacts on water quality in the reservoir and the Solent and potential mitigations. Water recycling is widely used around the world to create a new source of supply that means less water needs to be taken from the environment supporting wildlife, particularly in a drought.</p> <ul style="list-style-type: none"> <li>• The advanced treatment processes used in water recycling are used around the world to remove nutrients, pharmaceuticals and other impurities. Reverse osmosis and other elements of the Full Advanced Treatment process provide robust removal of impurities including “forever chemicals” in the purified recycled water produced.</li> <li>• Customer insight locally and nationally shows broad support for water recycling. We don't expect customers to buy bottled water when the clean, wholesome water coming from their taps continues to meet strict UK water standards and is many hundreds of times cheaper.</li> <li>• The Environment Agency will determine the permits for the release of purified recycled water into the reservoir and will monitor them. The Environment Agency ensure compliance of all discharges.</li> </ul> <p>Supplementing the reservoir with purified recycled water will create a new sustainable source of supply. Using the reservoir to store purified recycled water has been selected as the optimum way of making up a large part of the shortfall we face in Hampshire. Pumping 60 million litres of water a day into the reservoir will allow up to 90 million litres a day to be taken during a drought.</p> <ul style="list-style-type: none"> <li>• Purified recycled water is extremely clean. Water quality in the reservoir and in the reject water released to the sea is the subject of our ongoing Environmental Impact Assessment – which will be published as part of our planning application, which we expect to submit later in 2025.</li> <li>• Sea tankering from Norway is no longer included in our plan.</li> </ul> |

|           | <p>Other more appropriate options:</p> <p>Southern Water need to massively accelerate their plans to reduce leakage and repair of mains. As a Southern Water customer I am very upset that Southern Water customers are paying for large amounts of water to be treated which is then lost to leakage. If Southern Water sorted out leakage this would go a long way to providing the additional water needed, and would reduce the requirement for new schemes. They should get their existing infrastructure sorted out before they are allowed to implement any new infrastructure.</p> <p>Capturing rainfall and storing it for use during drier periods would be a much better solution than effluent recycling. Effluent recycling is very energy intensive (and therefore bad for UK energy security) and bad for the environment. We need solutions that work with nature not solutions that use more energy and contaminate the environment. We need a more sustainable approach.</p> <p>Moving abstraction points nearer to the sea to protect the chalk streams would be an option I would support. Diverting excess river water into reservoirs in the winter would also help to reduce flood risk from rivers. Options for storing rainwater (confined aquifers and reservoirs), reducing leaks and replacing mains should also be a significant part of future plans. These options would be cheaper as well as more environmentally friendly – both of which is good for customers.</p> <p>Cheaper, more sustainable options should be seriously investigated by Southern Water and DEFRA.</p> <p>I sincerely hope you will take on board my views (and the views of other respondees) and will force Southern Water to properly consider the alternative options.</p> | <ul style="list-style-type: none"> <li>We have dedicated budget for both proactive and reactive maintenance work and the budget is periodically reviewed to prioritise key maintenance activities. Regarding the quantification of cost, yes, we calculate capital, operational and carbon costs for each option. These are presented in the Water Resources Planning tables that accompany our plan and are scrutinised by Ofwat as part of our Business Plan. Ofwat regulates the amount of money that water companies can charge the general public for their services through their Price Review, with the most recent being completed on 19th December 2024 (PR24). The Price Review is based on water company business plans for the next 5 years, which are informed through the Best Value Plan outlined in the Water Resource Management Plan.</li> </ul> <p>The way that the water sector is operated and regulated in England and Wales means that the costs for all schemes are ultimately recovered through customer bills over a period of time. This is true for the HWTWRP as well</p> <ul style="list-style-type: none"> <li>Regarding storage options, we have been promoting the use of water butts since we started implementing our universal metering programme back in 2010. This included offering water butts at subsidised rates. We will continue to encourage and promote rainwater harvesting, including financial grants to community level initiatives.</li> </ul> <p>Reservoirs require a unique set of geological, geomorphological and hydrological settings to be viable. Our plan includes building two reservoirs (Havant Thicket Reservoir and SESRO) with the possibility of building a third (River Adur Offline Storage). We have considered a number of storage options in the past and will reassess them for WRMP29 in addition to considering locations for new reservoirs.</p> <p>A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire. Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning.</p> <p>Lower Greensand Aquifer Storage and Recovery (ASR) schemes are more challenging to manage and operate for water quality reasons, and they tend to have much shorter asset lives. Though we will be continuing to revisit and review the potential wider use of both MAR and ASR again, within future resource planning. We consider all options, regardless of size, as part of our options appraisal process. In a number of cases, we have considered different capacity variants of the same option. For example, in the case of HWTWRP, we considered water recycling plants ranging in size from 15MI/d to 60MI/d. Similarly, the desalination plans we have considered in the Central and Eastern areas vary in size from 10MI/d to 40MI/d.</p> |

|           |          | <p>A number of these plants can be built in a modular fashion i.e. a smaller plant can be built initially but expanded later as the need for water increases. The size of the scheme ultimately selected in the plan represents, in our view, the overall best value for the customers and the environment in terms to being able to meet the anticipated demand, resilience to climate change and delivering Environmental Destination.</p> <ul style="list-style-type: none"> <li>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers:<br/><a href="https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/">https://www.southernwater.co.uk/about-us/our-plans/turnaround-plan/</a></li> </ul> <p>Regarding profit, Ofwat regulate the amount of profit that water companies can make, which for the next 5 years cannot exceed 4.03%. This is the maximum profit a water company can make and various Price Control Deliverables set by Ofwat ensure that water company poor performance is reflected in a reduced profit margin and fines.</p> <p>In its business plan for the next five-year regulatory period, due to start in April 2025, Southern Water has proposed another step-change in investment amounting to approximately £8 billion of expenditure. This would be equivalent to investing circa £3,500 per household and would be the largest investment programme in the Company's history. It should be noted that Southern Water has temporarily suspended dividends to shareholders and has not paid dividends since 2017. Also, the £1.6 Billion investment funding received from Macquarie Asset Management has been paid to Southern Water Group and none of this amount has been paid to previous shareholders.</p> <p>Regarding leakage, the leakage reduction target set by the Government is 50% by 2050. we are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period.</p> <p>We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Regarding alternative schemes, we carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons. Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume</p> |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>of water that an option can provide, its resilience to climate change, environmental impact etc. in addition to capital and operating costs.</p> <p>The selection of Hampshire Water Transfer and Water Recycling Project (HWTWRP) followed a thorough options appraisal process carried out as part of the Regulators' Alliance for Progressing Infrastructure Development (RAPID) gated process.</p> <p>We have considered the relocation of existing surface water abstractions to new abstraction points further downstream, closer to the tidal limit. For example, we considered relocation of the River Itchen WSW abstraction to a point nearly 11km downstream just upstream of the tidal limit of the River Itchen. This was not viable because of the reduction in abstraction licences on the whole river and groundwater system and because of the impact on migratory fish. A Chalk Managed Aquifer Recharge (MAR) scheme (feasibility trial) is considered for South Hampshire.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WRMP480   | <p>I oppose Southern Water's plans to recycle waste water into drinking water as an ill conceived and unnecessary when there are far better and more cost effective ways to match future drinking water needs, including managing the complications of the more extremes of rainfall and drought brought about by climate change.</p> <p>Instead of wasting capital funds on this scheme Southern Water should be investing in stopping leaks in their drinking water infrastructure and in improving their waste water and sewage infrastructure. They should also significantly upgrade the capacity of their sewage works which have shown to be inadequate for many years now, with the regular pollution of rivers and coastline which is still occurring, to the detriment of wildlife and those using our rivers, harbours and coastal waters. It is evident that by discharging untreated sewage, or part-treated sewage into the environment that Southern Water is saving money, as it is obvious that opening a sluice or valve to cause the discharge is far cheaper than storing and actually running the equipment to properly treat the sewage. This is a totally unsatisfactory situation which appears to be not addressed by the regulator or Southern Water. Southern Water would appear to have a vested interest in not stopping discharges into the environment, and thus not improving their sewage treatment works, but is instead proposing to use funds for a scheme that only benefits investors and no one else.</p> <p>Finding the required investment funds, given the 'junk' status of existing loans, could come at high cost and therefore using any borrowed monies should be in worthwhile and sustainable schemes. The cost of this unnecessary, and overly expensive proposed scheme, will fall directly on Southern Water customer, with all the risks also on their shoulders.</p> <p>The cost of both creating and running the proposed the recycling scheme (£1.2 billion) is way in excess of other proposals such as increasing water storage schemes, which would additionally address the future extremes to rainfall as climate change alters the weather patterns, and which will probably be required anyway as climate change effects become more pronounced.</p> | <p>Thank you for reviewing our rdWRMP24 and providing feedback.</p> <p>Regarding leakage, the leakage reduction target set by the Government is 50% by 2050. We are planning to go beyond the target and reduce leakage by 53% by 2050. The target is based on what can realistically be achieved with existing technologies and includes a mains replacement programme that will see the length of mains replaced increase significantly over each successive 5-year planning period. We will be looking at emerging and new technologies in this field with the aim of using of them if they can deliver quicker and/or greater reductions in leakage going forward.</p> <p>Our Water Resources Management Plan covers our plan for provision of drinking water. Our treatment processes are designed to treat the water quality found in the water sources we rely upon. For further information on sewage treatment please refer to our Drainage and Wastewater Management Plan which you can find here: <a href="#">Our Drainage &amp; Wastewater Management Plans (DWMPs)</a></p> <p>We know our past performance was not good enough and we have apologised for that. We also know that as a direct result of not meeting customer expectations, we have a lot of work to do to rebuild trust with our communities. This is why we have been working hard to deliver our Turnaround Plan, for a short sharp improvement in performance across the board, and why we have set out our most ambitious investment programme ever for the years ahead after listening to our customers: <a href="#">Our Business Turnaround Plan   Southern Water</a></p> <p>We carry out an options appraisal exercise when we update our plan every 5 years. This exercise is usually carried out by an external consultant and looks at new options as well as options that were previously considered but were not taken forward for a variety of reasons.</p> <p>Cost is one of the factors considered in the options appraisal process but is not the only determining factor. We have also looked at factors such as volume of water that an option can</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Southern Water Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
