NCA B2 route 2

		 (=:::-)	<del>-</del>
Biodiversity	RAG		
Climate Regulation	£2019/year		
Natural Hazard Regulation	£/year		
Water Purification	RAG		Water purification is based on the current and proposed land use, and proximity to waterbody. Therefore, there isn't an expected difference between the SRO intervention and the Biodiversit
Water Regulation	na		The WRPG does not require the monetisation of Water Regulation Services. The main benefit is the deployable output, therefore this is not considered as an additional Natural Capital benefit
Air Quality	na		This is out of scope as there is now Air quality management areas across the options
Recreation and Tourism	£2019/year		Estimating impact from BNG+10% is not current feasible. It is assumed at this stage that what is removed on construction would be re-instated so the permanent impact across options in neg
Agriculture	£2019/year		No expected difference between the SRO intervention and the Biodiversity net gain scenario, biodiversity modelling would allocate habitat creation to grassland instead of agriculture

## Natural Capital Assessment

## **Biodiversity**

Pull numbers from BNG spreadsheet Tabs used are

## Climate regulation

Spreadsheet means that all info should just be pulled from biodiversity tab - check this is correct
May have to add extra habitats in, the climate regulation values with the correct formulas can be found on tab 'A1' which is hidden

## Natural hazard regulation

Data needed		
Woodland (ha)		
, ,		
	Note - only lowland meadows should be	
	used, due to data used	
	to create value. This	
	includes unimproved	
	neutral grassland. This	
	means if modified	
	grassland included in	
	main valye in biodiversity	
	table then data should be	
	entered manually in the	
	grassland section for	
	natural hazard. More	
	information on	Lowland
	classification can be	meadows
Grasslands (ha)	found on:	Buglife
	Note - includes open	
	water, wetlands and	
Freshwater (ha)	floodplains	

Option name Area coverage (ha) Notes

#### Biodiversity

Biodiversity					Overall Biodiversity metric tool unit score		l
Broad habitat	Ecosystem services	Temporary habitat lost during construction (ha)	Permanent habitat loss (ha)	On-site re- instatement/ creation (ha)	Off-site habitat creation/ BNG uplift (ha)	Biodiversity net loss metric score (Temporary and permanent loss)	Biodiversity metric score rating based on +10% net gain
Arable land	Crops, carbon sequestration, air quality management						
Arabic land	Water abstraction, recreation, flood						
Freshwater	regulation						
	Carbon sequestration, air quality						
Grassland	management, recreation						
Heathland	Livestock, carbon sequestration, recreation						
	Fisheries, recreation, water						
Marine	desalination						
	Livestock, carbon sequestration,						
Shrub	recreation						
Urban	No environmental benefits						
	Timber, carbon sequestration, air						
Woodland (coniferous)	quality management, recreation						
M/ (-1 : )	Timber, carbon sequestration, air						
Woodland (deciduous)	quality management, recreation						

Habitats that may be included but often aren't so not in main table.

weight = temp = 0.25 perm = 0.75 will auto update

\*more is permanent loss of this option than temporary

Component	Permanent or tempora	WFD Status and waterbody	Assessment	RAG rating	Assigned weight
WRP Parcel 72*	Permanent	Heritage Stream - Moderate Status	Water purification services are currently provided by grassland and woodland habitats. Hermitage Stream flows adjacent to the land parcel and the WFD waterbody is currently achieving Moderate status. The construction of water recycling plant will change the land cover which could potentially decline water purification services.	-2	0.75
Pipeline from to WRP	Permanent	N/a	WTW currently discharges water via the use LSO. The WRP waste stream will be mixed with the remaining final effluent at before being transferred to Outfall.  Therefore, this could potentially decline water purification of the receiving waterbody as dilution of pollutants downstream will decline. No change to water purification to the WRP as the water will be transferred via a pipeline from WTW.	-2	0.75
Pipeline route 2 to Lake buffer from WRP			The water will be transferred to Lake which will be created as an environmental buffer lake. The lake will not be in hydraulic continuity with the groundwater. River Itchen flows nearby and the WFD waterbody is achieving a Moderate status. During an emergency when drawdown of the lake is required, water will be discharged to River Itchen. Therefore, this will temporarily improve water purification with the increased flow during an emergency.	2	0.25
Lake Environmental Buffer	Permanent	River Itchen - Moderate Status	Lake will be an environmental buffer lake. The lake will have some vegetation planting around the lake be lined and will therefore have no effect on water purification services. Water from the lake will be discharged to River Itchen in emergency scenarios.	0	0.75
Pre-disinfection ceramic membrane plant at WSW	Permanent	River Itchen - Moderate Status	Water purification services are currently provided by greenfield and grassland habitats. The pre-disinfection ceramic membrane plant will be constructed. River Itchen is in close proximity of the plant and the change in land cover has a potential to decline water purification services.	-2	0.75
Pumping Station: WfLH WBS	Permanent	N/a	Water purification services are currently provided by greenfield and grassland habitats. A WBS will be constructed. There are no waterbodies within close proximity of the WBS however, the change in land cover has a potential to decline water purification services.	-1	0.75
Break Pressure Tank: WfLH BPT	Permanent		Water purification services are currently provided by arable, and greenfield habitats. River Hamble (Upper Hamble) flows nearby and the WFD waterbody is currently achieving Moderate status. As a BPT will be constructed, the change in land cover has a potential to decline water purification services.	-2	0.75

-6.25 4.75 -1.315789474

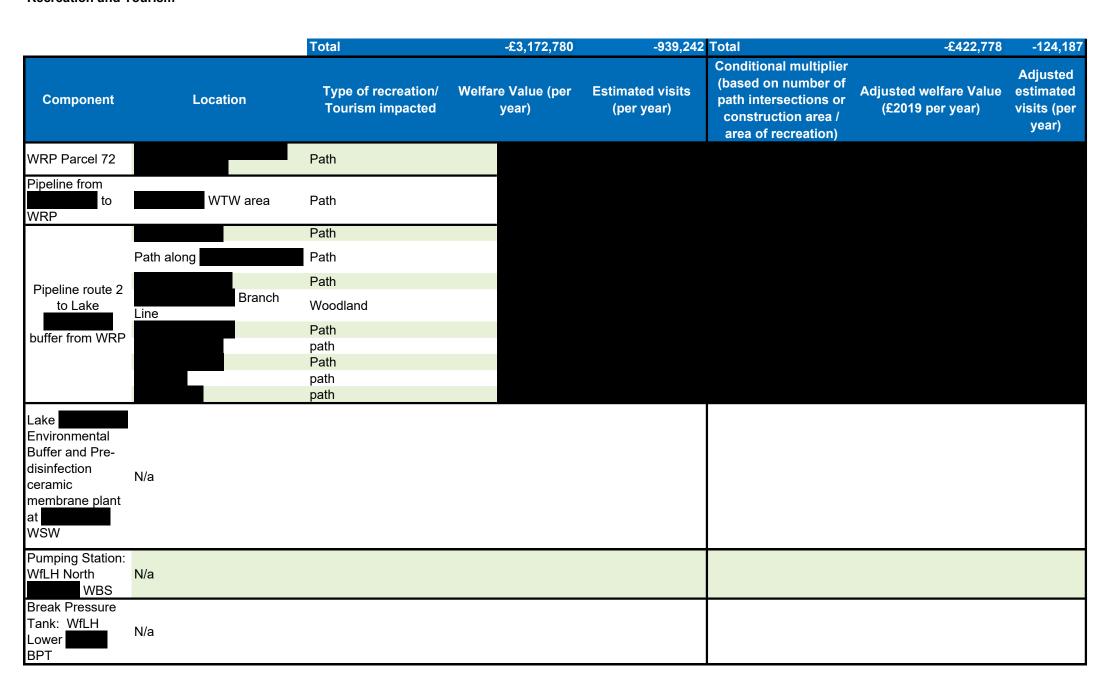

Criteria	Water purification
_	<u> </u>
0	No change
1 / -1	Negligible changes in land cover which will have a relatively minor impact to water quality based on the absence of a nearby waterbody
2/-2	Change in land cover (e.g. farmland, green urban, heath or other grassland/shrub habitats) which will have a minor impact to water quality and/or minor change in dilution which could affect water quality
3 / -3	Change in land cover (woodland, salt marsh or undamaged peatland) which will have a moderate/ major impact to water quality and/or major change in dilution which could affect water quality

# **Water Regulation**

## No Assessment

The WRPG does not require the monetisation of Water Regulation Services. The main benefit is the deployable output, therefore this is not considered as an additional Natural Capital benefit to avoid double counting, and Water Regulation has been screened out of the assessment.

#### **Recreation and Tourism**

# **Air Quality**

# No Assessment

The configuration does not fall within an Air Quality Management Area, and due to the temporary nature of habitat impacts during construction, Air Quality has been screened out of the assessment.

Configuration	Permanent arable land loss (ha)	Estimated Permanent Agriculture value (£) / year	Temporary arable land loss (ha)	Estimated Temporary Agriculture value (£)/ year
